1. INTRODUCTION	1
1.1. Basic definitions	1
1.2. Typical problems	3
1.3. Variational formulation of partial differential equations	7
1.4. Well-posed problems	11
1.5. Fourier series and their generalizations	11
Bibliography	15
 2. FIRST-ORDER EQUATIONS IN TWO INDEPENDENT VARIABLES	 16
2.1. Basic properties of the linear equation	16
2.2. Solution of linear equations	20
Exercises 2.1.	29
2.3. Quasi-linear equations	30
2.4. Solution of quasi-linear equations	33
Exercises 2.2	43
2.5. The general first-order non-linear equation	44
Exercises 2.3	49
2.6. Discontinuous and 'weak' solutions and shocks	49
Exercises 2.4	67
 3. LINEAR SECOND-ORDER EQUATIONS IN TWO INDEPENDENT VARIABLES	 68
3.1. Classification of linear second-order equations and their reduction to a canonical form	68
Exercises 3.1	76
3.2. The one-dimensional wave equation	76
3.3. The mixed initial-value-boundary-value problem for the one-dimensional wave equation	84
Exercises 3.2	92
3.4. The Cauchy problem for Laplace's equation	93
3.5. Factorization of second-order linear partial differential equations	94
Exercises 3.3	96
Bibliography	96

4. ELLIPTIC EQUATIONS	97
4.1. Preliminary remarks on existence and uniqueness	97
4.2. Some properties and solutions of Laplace's equation	99
Exercises 4.1	110
4.3. Integral representations and Green's functions	110
Exercises 4.2	126
4.4. Basic theorems for a class of self-adjoint equations	127
Exercises 4.3	133
4.5. Properties of eigenfunctions	133
Exercises 4.4	142
4.6. Discontinuous and weak solutions	142
4.7. Extension to differential operators that are not self-adjoint	144
Bibliography	146
5. HYPERBOLIC EQUATIONS	147
5.1. General properties	147
Exercises 5.1	159
5.2. Proof of existence of solution of the Cauchy problem	160
5.3. Fundamental solutions and Green's functions for the one-dimensional wave equation	167
Exercises 5.2	177
5.4. Green's functions for the general hyperbolic equation	177
Exercises 5.3	188
5.5. Weak solutions	188
Bibliography	191
6. PARABOLIC EQUATIONS	192
6.1. Preliminary remarks on existence and uniqueness	192
6.2. The heat-conduction equation	195
Exercises 6.1	206
6.3. Fundamental solutions and Green's functions for the heat-conduction equation	207
Exercises 6.2	212
6.4. The general parabolic equation	213
Bibliography	215
7. ANALYTICAL METHODS OF SOLUTION	216
7.1. Separated series solutions of partial differential equations	216
Exercises 7.1	228

7.2. The Laplace transform	228
Exercises 7.2	240
7.3. Fourier transforms	242
Exercises 7.3	255
7.4. General integral transforms	255
Bibliography	263
<b>8. SOME EQUATIONS INVOLVING MORE THAN TWO INDEPENDENT VARIABLES</b>	264
8.1. Laplace's and related equations	264
Exercises 8.1	273
8.2. The wave equation in two and three space dimensions	273
Exercises 8.2	283
8.3. The reduced-wave equation	284
8.4. The heat-conduction equation	286
Exercises 8.3	290
Bibliography	291
<b>9. SYSTEMS OF FIRST-ORDER PARTIAL DIFFERENTIAL EQUATIONS</b>	292
9.1. Basic definitions and examples	292
9.2. Classification of systems of equations	295
Exercises 9.1	302
9.3. Totally hyperbolic linear systems	303
Exercises 9.2	312
9.4. Quasi-linear hyperbolic systems	312
Bibliography	316
<b>10. APPROXIMATE METHODS OF SOLUTION</b>	317
10.1. Finite difference methods	317
10.2. The method of characteristics	328
10.3. Variational methods	331
10.4. Integral equation methods	336
10.5. Perturbation methods	339
Bibliography	342
<b>SOLUTIONS TO EXERCISES</b>	344
<b>INDEX</b>	355
