

TABLE OF CONTENTS

INTRODUCTION	1
CHAPTER I. INTRINSIC GEOMETRY OF CONVEX SURFACES	6
1. Convex bodies and convex surfaces	7
2. Manifolds with intrinsic metric	10
3. Convexity property of the intrinsic metric of a convex surface	12
4. Basic properties of the angle between segments on a convex surface	15
5. Curvature of a convex surface	17
6. Existence of a convex polyhedron with given metric	20
7. Existence of a closed convex surface with given metric	22
8. Curves on a convex surface	25
9. Area of a convex surface	28
10. Specific curvature of a convex surface	30
11. Gluing theorem. Other existence theorems	33
12. Convex surfaces in spaces of constant curvature	35
13. Manifolds of bounded curvature	38
CHAPTER II. REGULARITY OF CONVEX SURFACES WITH REGULAR METRIC	44
1. Extrinsic properties of geodesic lines on a convex surface	45
2. Special resolution of the radius-vector in the neighborhood of an arbitrary initial point	53
3. Convex surfaces of bounded specific curvature	57
4. Construction of a convex surface with infinite upper curvature on a given set of points	64
5. Auxiliary surface Φ and some of its properties	69
6. Monotony of convex caps with regular metric	78
7. Intrinsic estimates for some geometric quantities along the boundary of an analytic cap	83
8. Estimate for normal curvatures at interior points of a regular convex cap	89
9. Existence of an analytic convex cap realizing a given analytic metric	95

10. Regularity of convex surfaces with regular metric	101
11. Estimates for the derivatives of the solution of a second-order elliptic partial differential equation	110
CHAPTER III. MONOTYPY OF CONVEX SURFACES	119
1. Curves with i.g.c. of bounded variation	120
2. On convergence of isometric convex surfaces	131
3. Mixture of isometric surfaces	137
4. On isometric convex surfaces in canonical position	144
5. The auxiliary surface Ω and its plane sections	153
6. Monotypy of closed convex surfaces	167
7. Monotypy of convex surfaces with boundary. Maximum principle	175
8. Monotypy of unbounded convex surfaces with total curvature 2π	182
9. Monotypy of unbounded convex surfaces with total curvature less than 2π	189
CHAPTER IV. INFINITESIMAL BENDINGS OF CONVEX SURFACES	201
1. Bending fields of general convex surfaces	202
2. Fundamental Lemma on bending fields of convex surfaces	211
3. Bending field of a convex surface with prescribed vertical component along the boundary	219
4. Special approximation of a bending field of a general convex surface	233
5. Estimation of certain integrals	239
6. Proof of the Fundamental Lemma	252
7. Rigidity of convex surfaces	260
8. Applications of the rigidity theorems	266
CHAPTER V. CONVEX SURFACES IN SPACES OF CONSTANT CURVATURE	270
1. Elliptic space	271
2. Convex bodies and convex surfaces in elliptic space	282
3. Mappings of congruent figures	291
4. Isometric surfaces	300
5. Infinitesimal bendings of surfaces in elliptic space	308
6. Monotypy of general convex surfaces in elliptic space	314
7. Regularity of convex surfaces with regular metric	322
8. Regularity of convex surfaces with regular metric in a hyperbolic space	331

CHAPTER VI. CONVEX SURFACES IN RIEMANNIAN SPACE	345
1. Surfaces in Riemannian spaces	346
2. A priori estimates for normal curvature	351
3. A priori estimates for the derivatives of space coordinates with respect to surface coordinates	359
4. Infinitesimal bendings of surfaces in Riemannian spaces	365
5. On solutions of a certain elliptic system of differential equations	371
6. Embedding of manifolds infinitesimally close to embeddable manifolds	379
7. Isometric embedding of almost embeddable manifolds	386
8. Partial solution of the isometric embedding problem	395
9. More about estimates for normal curvature on a closed convex surface	400
10. Complete solution of the isometric embedding problem	413
11. Isometric mappings of a punctured space into a euclidean space	419
12. Rigidity of closed surfaces, not homeomorphic to a sphere, in a Riemannian space	424
CHAPTER VII. CONVEX SURFACES WITH GIVEN SPHERICAL IMAGE	435
1. Christoffel's problem	435
2. Minkowski's problem	442
3. Regularity of a convex surface whose Gauss curvature is positive and a regular function of the normal	448
4. Uniqueness theorems for convex surfaces with given function of principal radii of curvature	459
5. Existence of a convex surface with given function of principal radii of curvature	468
6. Convex polyhedra with given values of a monotone function on their faces	475
7. Convex polyhedra with vertices on given rays and with given values of a monotone function on their polyhedral angles	480
8. Uniqueness of a convex surface with given intrinsic metric and metric of spherical image	486
9. Convex surfaces with almost umbilical points	493
CHAPTER VIII. GEOMETRIC THEORY OF MONGE-AMPERE EQUATIONS OF ELLIPTIC TYPE	503
1. Convex polyhedra with given generalized area of faces and given generalized curvature at the vertices	503

2. Convex surfaces with given generalized area and given generalized curvature	513
3. Generalized solutions of the Monge-Ampère equation $rt - s^2 = \varphi(x, y, z, p, q)$. Boundary-value problems for the generalized solutions	521
4. Uniqueness theorems for solutions of the equation $rt - s^2 = \varphi(x, y, z, p, q)$	530
5. Regular solution of a boundary-value problem with the equation $rt - s^2 = \varphi(x, y, z, p, q)$ with φ regular	534
6. Regularity of generalized solutions of the Monge-Ampère equation $rt - s^2 = \varphi(x, y, z, p, q)$ with φ regular	540
7. Strongly elliptic Monge-Ampère equations	547
8. First boundary-value problem for generalized solutions of strongly elliptic Monge-Ampère equations	554
9. Regular solution of a special boundary-value problem for a strongly elliptic Monge-Ampère equation	558
10. Regularity of generalized solutions of strongly elliptic Monge-Ampère equations with regular coefficients	564
CHAPTER IX. SURFACES OF BOUNDED EXTRINSIC CURVATURE	571
1. Continuous mappings of bounded variation	572
2. Positive, negative and total variation of a continuous mapping	581
3. Smooth surfaces of bounded extrinsic curvature	590
4. Surfaces of zero extrinsic curvature	603
5. Surfaces of nonnegative extrinsic curvature	611
6. The threaded surface	615
7. Approximation of surfaces of bounded extrinsic curvature by regular surfaces	626
8. Surfaces of bounded extrinsic curvature as manifolds of bounded intrinsic curvature	636
9. Relation between intrinsic and extrinsic curvature. Gauss's Theorem	642
APPENDIX. UNSOLVED PROBLEMS	652
