

# Contents

## CHAPTER I

### Differential Calculus

1. Categories . . . . .	1
2. Topological vector spaces . . . . .	3
3. Derivatives and composition of map . . . . .	6
4. Integration and Taylor's formula . . . . .	10
5. The inverse mapping theorem . . . . .	13

## CHAPTER II

### Manifolds

1. Atlases, charts, morphisms . . . . .	21
2. Submanifolds, immersions, submersions. . . . .	24
3. Partitions of unity . . . . .	32
4. Manifolds with boundary . . . . .	37

## CHAPTER III

### Vector Bundles

1. Definition, pull-backs . . . . .	41
2. The tangent bundle . . . . .	47
3. Exact sequences of bundles . . . . .	48
4. Operations on vector bundles . . . . .	54
5. Splitting of vector bundles . . . . .	58

## CHAPTER IV

### Vector Fields and Differential Equations

1. Existence theorem for differential equations . . . . .	61
2. Vector fields, curves, and flows . . . . .	82
3. Sprays . . . . .	90

4. The exponential map . . . . .	95
5. Existence of tubular neighborhoods . . . . .	96
6. Uniqueness of tubular neighborhoods . . . . .	98

## CHAPTER V

### Differential Forms

1. Vector fields, differential operators, brackets . . . . .	103
2. Lie derivative . . . . .	109
3. Exterior derivative . . . . .	111
4. The canonical 2-form . . . . .	123
5. The Poincaré lemma . . . . .	124
6. Contractions and Lie derivative . . . . .	126
7. Darboux theorem . . . . .	129

## CHAPTER VI

### The Theorem of Frobenius

1. Statement of the theorem. . . . .	135
2. Differential equations depending on a parameter . . . . .	139
3. Proof of the theorem . . . . .	140
4. The global formulation . . . . .	142
5. Lie groups and subgroups. . . . .	145

## CHAPTER VII

### Riemannian Metrics

1. Definition and functoriality . . . . .	151
2. The Hilbert group . . . . .	154
3. Reduction to the Hilbert group . . . . .	157
4. Hilbertian tubular neighborhoods . . . . .	160
5. Non-singular bilinear tensors . . . . .	162
6. Riemannian metrics and sprays . . . . .	164
7. The Morse-Palais lemma . . . . .	167

## CHAPTER VIII

### Integration of Differential Forms

1. Sets of measure 0 . . . . .	171
2. Change of variables formula . . . . .	175
3. Orientation . . . . .	184
4. The measure associated with a differential form . . . . .	186

## CHAPTER IX

**Stokes' Theorem**

1. Stokes' theorem for a rectangular simplex . . . . .	191
2. Stokes' theorem on a manifold . . . . .	194
3. Stokes' theorem with singularities . . . . .	198
4. The divergence theorem . . . . .	204
5. Cauchy's theorem . . . . .	207
6. The residue theorem . . . . .	210

## APPENDIX

**The Spectral Theorem**

1. Hilbert space . . . . .	215
2. Functionals and operators . . . . .	216
3. Hermitian operators . . . . .	219
Bibliography . . . . .	226
Index . . . . .	228
