

## CONTENTS

### Chapter 1. AFFINE SPACES

1.1. Basics	1
1.2. Affine coordinates and affine subspaces	4
1.3. Affine transformations	6
1.4. Affine invariants	10
1.5. Some topics in affine planes over special fields	13
1.6. Euclidean spaces	17
1.7. Orthonormal coordinate frames and orthogonal transformations	20
1.8. Motions in $E^2$	22
1.9. Content	30
1.10. The Erlangen program	32

### Chapter 2. MOTIONS IN THE EUCLIDEAN PLANE

2.1. Direct and opposite motions	34
2.2. Products of line reflections	39

### Chapter 3. PROJECTIVE SPACES

3.1. Basics	46
3.2. The real projective plane	51

3.3. Projectivities and their groups	54
3.4. Central collineations	65
3.5. Theorems of Desargues and Pappus	72
3.6. Conics in the real projective plane	75
3.7. Polarity	80
3.8. Projective incidence spaces	86
3.9. Translation planes	94
3.10. Desarguesian and pappian planes	101
3.11. Finite incidence planes	105

#### Chapter 4. METRIC PLANES - AXIOMATIC FOUNDATIONS

4.1. On axioms	109
4.2. The metric plane	111
4.3. The ordered metric plane	124
4.4. Elliptic-metric planes	133
4.5. The sphere model	136
4.6. The hyperbolic-metric plane - algebraic preliminaries	151
4.7. The Poincaré model	160
4.8. Geometric properties of the hyperbolic-metric plane	171
4.9. The Cayley-Klein model	177
4.10. Relations between real elliptic and hyperbolic planes	188
4.11. Continuity	196
