SECTION A: INTRODUCTION

1 The Reinvention of Decision Making

3

Judith Orasanu and Terry Connolly

Presents three scenarios typical of naturalistic decision making. Reviews eight characteristics common to them. Discusses how these characteristics differ from ones encountered in traditional decision research.

2 Why Classical Decision Theory Is an Inappropriate Standard for Evaluating and Aiding Most Human Decision Making

21

Lee Roy Beach and Raanan Lipshitz

Explains limitations of classical decision theory in applied settings. Presents a case study that demonstrates decision strategies found under conditions typical of real settings.

3 Three Paradigms for Viewing Decision Biases

36

Marvin S. Cohen

Describes and evaluates the formalist-empiricist, rationalist, and naturalistic approaches to errors in decision making and their implications for studying real-world decisions.

4 The Naturalistic Basis of Decision Biases

51

Marvin S. Cohen

Raises questions about how we identify decision errors, why they occur, and what is their impact. Presents six challenges to claims by the prevailing rationalist view of decision bias, and proposes an alternative, naturalistic framework for evaluating decisions.

SECTION B: MODELS OF NATURALISTIC DECISION MAKING

- 5 Converging Themes in the Study of Decision Making in Realistic Settings** **103**
Raanan Lipshitz
 Reviews nine models of naturalistic decision making and assesses them for similarities. Identifies six common themes. Eight of these models are described by their authors in Chapters 6–12, and 17.
- 6 A Recognition-Primed Decision (RPD) Model of Rapid Decision Making** **138**
Gary A. Klein
 Describes how decision makers recognize situations as typical, recognize typical courses of action, and evaluate actions through mental simulation.
- 7 Image Theory: Personal and Organizational Decisions** **148**
Lee Roy Beach
 Describes decision making as constrained by three types of images: values, goals, and plans.
- 8 Deciding and Doing: Decision Making in Natural Contexts** **158**
Jens Rasmussen
 Presents decision making as a dynamic process intimately connected with action; reviews the skills/rules/knowledge hierarchy of decision making.
- 9 Decision Making as Argument-Driven Action** **172**
Raanan Lipshitz
 Critiques the notion of decisions as choices derived from alternatives; proposes that a decision is best described as the enactment of an action argument.
- 10 The Search for a Dominance Structure in Decision Making: Examining the Evidence** **182**
Henry Montgomery
 Proposes that decision makers pass through several phases to redefine goals and options until one alternative becomes dominant over the others.
- 11 A Theory of Explanation-Based Decision Making** **188**
Nancy Pennington and Reid Hastie
 Proposes that in certain situations, people construct a plausible explanatory model from the available information and make decisions that match the explanation.

SECTION C: METHODS OF NATURALISTIC DECISION RESEARCH

- 12 Naturalistic Decision Making from a Brunswikian Viewpoint: Its Past, Present, Future** **205**
Kenneth R. Hammond
 Identifies some limitations in laboratory-based paradigms for decision research. Describes the research tradition attempting to clarify the basis for judgments in naturalistic settings.
- 13 Process-Tracing Methods for the Study of Cognition Outside of the Experimental Psychology Laboratory** **228**
David D. Woods
 Shows how one can go beyond spartan laboratory paradigms and study complex problem-solving behaviors without abandoning all methodological rigor. Describes how to carry out process tracing or protocol analysis methods as a "field experiment."
- 14 A Comment on Applying Experimental Findings of Cognitive Biases to Naturalistic Environments** **252**
Jay J. J. Christensen-Szalanski
 Proposes ways for researchers to be more responsive to applied needs. Describes how practitioners can best use findings from the "bias" research literature.

SECTION D: APPLICATIONS OF NATURALISTIC DECISION MODELS

- 15 The Bottom Line: Naturalistic Decision Aiding** **265**
Marvin S. Cohen
 Based on arguments presented in Chapters 3 and 4, explains that decision aids should support more optimal variants of user-preferred decision strategies.
- 16 Evolutionary Design of Systems to Support Decision Making** **270**
William B. Rouse and John Valusek
 Explains why support systems should allow users to adopt their preferred strategies. Describes the need for support systems that are designed to evolve.
- 17 A Model to Support Development of Situation Assessment Aids** **287**
David Noble
 Describes the model of situation assessment and its implications for designing decision aids.

18	Training Decision Makers for the Real World	306
	<i>Barbara Means, Eduardo Salas, Beth Crandall, and T. Owen Jacobs</i>	
	Discusses problems in transfer of training from formal models of decision making. Describes remedies for training of naturalistic decision making.	
19	Team Decision Making in Complex Environments	327
	<i>Judith Orasanu and Eduardo Salas</i>	
	Describes the features of decision making at the team level. Examines some attempts to account for team behaviors.	
20	Team Decision-Making Biases: An Information-Processing Perspective	346
	<i>LorRaine Duffy</i>	
	Presents a model of team decision making from an information processing perspective. Examines biases in decision making that reflect this model. Suggests areas to examine for future improvements in team decision making.	
SECTION E: REVIEW OF CURRENT PROGRESS		
21	A Laboratory Scientist's View of Naturalistic Decision Making	362
	<i>Michael E. Doherty</i>	
	Reviews the tradition of research in classical decision theory. Contrasts the strengths and weaknesses of naturalistic versus laboratory paradigms.	
22	Twenty Questions: Suggestions for Research in Naturalistic Decision Making	389
	<i>Gary A. Klein</i>	
	Identifies a set of research questions to further our understanding of naturalistic decision making.	
23	Conclusions: Decision Making in Action	404
	<i>Gary A. Klein and David D. Woods</i>	
	Reviews the progress made by naturalistic decision making and the work that still needs to be done.
