

Table of Contents

Introduction	1
1. Asymptotic Methods	22
Nets and thickenings; asymptotic connectedness and contractibility; large-scale dimension and (co)homology; width and filling invariants.	
2. Asymptotic Cones	35
Ultrafilters and asymptotic cones $\text{Con}_\infty X$ and $\text{Con}_\omega X$; connectivity of Con_∞ for Lie groups and lattices; geometry of Con_∞ and the space of the word metrics.	
3. Distorsion	49
Extrinsic geometry of subgroups and submanifolds; distortion and retraction of subgroups in Lie groups; polynomial, exponential and non-recursive distortion.	
4. Topology of Balls	73
Topology of balls $B(R) \subset X$ for $R \rightarrow \infty$ and connectedness radii $\bar{R}_k(r)$.	
5. Filling Invariants	81
Filling invariants of closed curves: isoperimetric and isodiametric functions etc.; area filling in nilpotent and solvable groups; filling length, filling radius and Morse landscape; filling-in of k -dimensional cycles for $k \geq 2$; filling on the large scale and volume distortion of subspaces.	

6. Semi-Hyperbolic Spaces	119
$K \leq 0$ and semi-hyperbolicity; coning and combing; rank and geometry of flats; Tits boundary and Morse landscape at infinity; minimal surfaces and norms on homology; group actions with $K \leq 0$; semi-hyperbolic constructions and generalizations.	
7. Hyperbolic Groups	175
Hyperbolic groups and $K < 0$; hierarchy in the hyperbolic ranks; pinching and conformal geometry at infinity; round trees and strongly branched polyhedra; Kähler and anti-Kähler groups; uniform embeddings and a - T -menability.	
8. L_p-Cohomology	219
L_p -cohomology and conformal dimensions at infinity; L_2 -Betti numbers and spectrum near zero; vanishing and non-vanishing of $L_p H^*(X)$.	
Appendix to § 8	263
Conformally hyperbolic groups and spaces.	
9. Finitely Presented Groups	269
Density of random groups and other speculations.
