<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Feedback control systems	1
1.2	Linear theory	3
1.3	Organization of this book	3
1.3.1	Part I Ordinary control theory	4
1.3.2	Part II Optimal control theory	4
1.3.3	Part III Stochastic control theory	5
 PART I ORDINARY CONTROL THEORY		
<b>2</b>	<b>Ordinary linear systems</b>	<b>9</b>
2.1	Dynamic systems	9
2.1.1	Principle of superposition	9
2.2	Dynamic equations	10
2.2.1	Solutions	12
2.3	Continuous-time step responses	13
2.3.1	First-order equations	14
2.3.2	Second-order equations	15
2.3.3	Higher-order equations	19
2.4	Discrete-time step responses	19
2.4.1	First-order systems	19
2.4.2	Second-order systems	21
2.5	Continuous-time exponentials and sine waves	22
2.5.1	Exponential forcing	22
2.5.2	Sinusoidal forcing and frequency response	22
2.6	Transformations and transfer functions	26
2.6.1	Laplace transform, for continuous-time systems	26
2.6.2	$z$ -transform, for difference equations	29
2.6.3	Transfer functions	31
2.6.4	Correspondence between difference equations and $\delta$ -equations	32
2.7	Impulse response	34
2.7.1	Discrete-time	35

2.7.2	Continuous-time	36
2.8	Evaluating quadratic integrals	37
2.8.1	Continuous-time $I_c$	38
2.8.2	Discrete-time $I_d$	39
2.9	Sampled data	40
2.9.1	Aliasing and choice of sampling frequency	41
2.9.2	Correspondence between the differential equation governing $y(t)$ and the difference equation governing $y_\Delta(i)$	43
2.9.3	Reconstructing continuous-time $y(t)$	45
2.10	Minimum-phase equations	46
2.11	Problems	47
<b>3</b>	<b>Feedback control and integral action</b>	<b>55</b>
3.1	Introduction	55
3.2	Feedback systems	57
3.3	Feedback control systems	58
3.3.1	Requirements for good control	59
3.3.2	Robustness	60
3.3.3	Response to exogenous variables	60
3.4	Integrators	61
3.5	Integrators and steady-state performance	62
3.5.1	Target-tracking with unity feedback	63
3.5.2	Disturbance rejection	64
3.5.3	Target-tracking with non-unity feedback	65
3.5.4	Discrete-time systems	67
3.5.5	Conclusions about the effect of integrators on steady-state performance	68
3.6	Problems	69
<b>4</b>	<b>Stability of feedback systems</b>	<b>74</b>
4.1	Introduction	74
4.2	Stability of continuous-time systems	77
4.3	Stability of discrete-time systems	80
4.4	The Nyquist criterion	83
4.5	Relative stability	88
4.5.1	Phase margin	89
4.5.2	Gain margin	90
4.5.3	Closed-loop frequency response	92
4.6	Problems	94

<b>5</b>	<b>Root-locus diagrams</b>	98
5.1	Introduction	98
5.2	Angle and magnitude conditions	100
5.3	Rules for drawing root-locus diagrams	103
5.4	Additional features of root-locus diagrams	108
5.5	Discrete-time systems	111
5.6	Problems	113
<b>6</b>	<b>Transfer functions for controllers</b>	118
6.1	Introduction	118
6.2	Phase advance and phase lag	119
6.3	Combining phase advance and phase lag	126
6.3.1	Three-term, PID, controllers	128
6.4	Analytic design	129
6.4.1	Performance criteria	129
6.4.2	Two levels of design	134
6.4.3	Fixed-configuration design	134
6.5	Problems	137
<b>7</b>	<b>Non-linear systems</b>	140
7.1	Introduction	140
7.2	Describing functions	141
7.3	Phase plane	149
7.3.1	Relay control systems	154
7.3.2	Variable-structure control	159
7.3.3	Some other non-linearities	161
7.4	Problems	166

## PART II OPTIMAL CONTROL THEORY

<b>8</b>	<b>Linear state equations and their properties</b>	173
8.1	State space and state variables	173
8.2	Dynamic properties of <b>A</b> , <b>B</b>	175
8.2.1	Transient behaviour	175
8.2.2	Controllability	176
8.3	Outputs	178
8.3.1	Observability	178
8.3.2	Transfer functions	179
8.4	State space realizations	180
8.4.1	Additional state variables	180
8.4.2	Linear transformations	182
8.4.3	Realizations for SISO systems	182

8.5	Uncontrollability and unobservability	184
8.5.1	Lack of linear independence	185
8.5.2	Subsystems having identical dynamics	186
8.5.3	Pole-zero cancellations	187
8.5.4	Stabilizability and detectability	188
8.6	Problems	188
<b>9</b>	<b>Optimal LQP control</b>	<b>192</b>
9.1	Introduction	192
9.2	LQP introduction to optimal control theory	193
9.2.1	Discrete-time scalar problem	194
9.2.2	Continuous-time scalar problem	197
9.3	General results about LQP optimal control	201
9.3.1	Continuous-time LQP results	201
9.3.2	For discrete-time systems	202
9.4	Regulation, target-tracking, and disturbance rejection	203
9.5	Steady-state LQP optimal control	206
9.5.1	Example with uncontrollable exogenous variables	211
9.6	Problems	212
<b>10</b>	<b>Optimal, linear, feedback controllers</b>	<b>216</b>
10.1	Introduction	216
10.1.1	Notation	217
10.2	Observers	218
10.2.1	The gain matrix $\mathbf{K}_O$	220
10.3	Ideal LQP feedback control	222
10.3.1	Structure of the ideal controller transfer function	223
10.3.2	Classical controllers	224
10.3.3	An example of an ideal LQP controller	225
10.3.4	Behaviour of the closed-loop control system	228
10.4	General conclusions	229
10.4.1	Specifying the problem	230
10.4.2	Controller structure	230
10.4.3	Controller dynamics	231
10.5	Problems	231
<b>11</b>	<b>Optimal control theory</b>	<b>236</b>
11.1	Introduction	236

11.2	Scalar, time-invariant problems	238
11.2.1	Discrete-time	238
11.2.2	Continuous-time	240
11.3	Problems having multiple states	241
11.3.1	The principle of optimality	243
11.4	LQP problems	244
11.5	Calculus of variations	246
11.5.1	The Pontriagin maximum principle	246
11.5.2	Problems with constrained controls	247
11.6	Features of dynamic programming	251
11.7	Problems	252
PART III STOCHASTIC CONTROL THEORY		
12	<b>Probability and random processes</b>	259
12.1	Introduction	259
12.2	Probability	259
12.3	Probability distributions	263
12.4	Stochastic state space models	270
12.4.1	Discrete-time, linear stochastic systems	272
12.4.2	Continuous-time, stochastic systems	273
12.5	Stochastic variables	274
12.5.1	Discrete-time	274
12.5.2	Continuous-time	277
12.6	Random processes	280
12.7	Problems	286
13	<b>Estimating uncertain states</b>	293
13.1	Introduction	293
13.2	Bayes's rule	295
13.2.1	Scalar linear example	298
13.2.2	The need for prior information	300
13.3	Kalman filters	301
13.3.1	Introductory, first-order example	301
13.3.2	Discrete-time systems of any order	302
13.3.3	The covariance equations	305
13.3.4	Summary of the discrete-time Kalman filter	308
13.3.5	Continuous-time systems	309
13.4	Parameter estimation	309
13.4.1	The basic recursive algorithm	310
13.4.2	Preventing convergence of the Kalman gain to zero	312

13.4.3	Real systems	314
13.5	Estimation for non-linear systems	314
13.5.1	Normal approximation	316
13.5.2	Predictor–corrector	316
13.5.3	Extended Kalman filter	317
13.6	Problems	320
<b>14</b>	<b>Optimal stochastic control</b>	<b>325</b>
14.1	Introduction	325
14.2	Fixed-configuration problems	328
14.2.1	A simple example	330
14.3	Discrete-time problems with known current state	331
14.3.1	LQP problems	333
14.4	Discrete-time, optimal, stochastic control	335
14.4.1	LQG problems	337
14.5	Continuous-time LQG problems	340
14.5.1	A simple example	341
14.6	Problems	344
<b>15</b>	<b>Information and feedback control</b>	<b>353</b>
15.1	Introduction	353
15.2	Cost of uncertainty about controlled objects	355
15.2.1	Notation	355
15.2.2	Information variability and object variability	355
15.2.3	Discrete-time LQG example	356
15.3	Interaction between controller functions	359
15.3.1	Structural properties of controlled objects	359
15.3.2	Intentional errors, caution and probing	362
15.4	Various controller designs	365
15.4.1	Classical transfer functions	365
15.4.2	Receding-horizon controllers	366
15.4.3	Adaptive control	366
15.4.4	Extremal control	368
15.5	General, practical conclusions	369
	<b>Answers to problems</b>	<b>371</b>
	<b>Bibliography</b>	<b>382</b>
	<b>Index</b>	<b>385</b>
