Preface	vii
Notes to the Reader	xi
Chapter 1 Wedderburn-Artin Theory	1
§1. Basic terminology and examples	1
26 Exercises	
§2. Semisimplicity	16
8 Exercises	
§3. Structure of semisimple rings	20
25 Exercises	
Chapter 2 Jacobson Radical Theory	35
§4. The Jacobson radical	35
28 Exercises	
§5. Jacobson radical under change of rings	52
10 Exercises	
§6. Group rings and the J -semisimplicity problem	57
17 Exercises	
Chapter 3 Introduction to Representation Theory	69
§7. Modules over finite-dimensional algebras	69
10 Exercises	
§8. Representations of groups	74
27 Exercises	
§9. Linear groups	97
6 Exercises	

Chapter 4 Prime and Primitive Rings	103
§10. The prime radical; prime and semiprime rings	103
29 Exercises	
§11. Structure of primitive rings; the Density Theorem	119
23 Exercises	
§12. Subdirect products and commutativity theorems	136
22 Exercises	
Chapter 5 Introduction to Division Rings	151
§13. Division rings	151
15 Exercises	
§14. Some classical constructions	159
19 Exercises	
§15. Tensor products and maximal subfields	176
6 Exercises	
§16. Polynomials over division rings	179
15 Exercises	
Chapter 6 Ordered Structures in Rings	191
§17. Orderings and preorderings in rings	191
15 Exercises	
§18. Ordered division rings	202
7 Exercises	
Chapter 7 Local Rings, Semilocal Rings, and Idempotents	211
§19. Local rings	211
16 Exercises	
§20. Semilocal rings	221
13 Exercises	
§21. The theory of idempotents	229
34 Exercises	
§22. Central idempotents and block decompositions	250
9 Exercises	
Chapter 8 Perfect and Semiperfect Rings	257
§23. Perfect and semiperfect rings	257
6 Exercises	
§24. Homological characterizations of perfect and semiperfect rings	265
10 Exercises	
§25. Principal indecomposables and basic rings	271
4 Exercises	
Name Index	277
Subject Index	281
