

# CONTENTS

<b>PART A: INTRODUCTION AND BASIC TECHNIQUES</b>	<b>1</b>
<b>CHAPTER I. SOME IMPORTANT CLASSES OF GLOBAL OPTIMIZATION PROBLEMS</b>	<b>3</b>
1. Global Optimization	3
2. Concave Minimization	9
2.1. Definition and Basic Properties	9
2.2. Brief Survey of Direct Applications	12
2.3. Integer Programming and Concave Minimization	14
2.4. Bilinear Programming and Concave Minimization	20
2.5. Complementarity Problems and Concave Minimization	24
2.6. Max–Min Problems and Concave Minimization	25
3. D.C. Programming and Reverse Convex Constraints	26
3.1. D.C. Programming: Basic Properties	26
3.2. D.C. Programming: Applications	32
3.3. Reverse Convex Constraints	37
3.4. Canonical D.C. Programming Problems	39
4. Lipschitzian Optimization and Systems of Equations and Inequalities	43
4.1. Lipschitzian Optimization	43
4.2. Systems of Equations and Inequalities	47
<b>CHAPTER II. OUTER APPROXIMATION</b>	<b>53</b>
1. Basic Outer Approximation Method	53
2. Outer Approximation by Convex Polyhedral Sets	58
3. Constraint Dropping Strategies	67
4. On Solving the Subproblems ( $Q_k$ )	71
4.1. Finding an Initial Polytope $D_1$ and its Vertex Set $V_1$	72
4.2. Computing New Vertices and New Extreme Directions	74
4.3. Identifying Redundant Constraints	84

<b>CHAPTER III. CONCAVITY CUT</b>	<b>89</b>
1. Concept of a Valid Cut	89
2. Valid Cuts in the Degenerate Case	95
3. Convergence of Cutting Procedures	99
4. Concavity Cuts for Handling Reverse Convex Constraints	104
5. A Class of Generalized Concavity Cuts	108
6. Cuts Using Negative Edge Extensions	113
<b>CHAPTER IV. BRANCH AND BOUND</b>	<b>115</b>
1. A Prototype Branch and Bound Method	115
2. Finiteness and Convergence Conditions	126
3. Typical Partition Sets and their Refinement	137
3.1. Simplices	137
3.2. Rectangles and Polyhedral Cones	142
4. Lower Bounds	145
4.1. Lipschitzian Optimization	145
4.2. Vertex Minima	146
4.3. Convex Subfunctionals	148
4.4. Duality	159
4.5. Consistency	164
5. Deletion by Infeasibility	169
6. Restart Branch and Bound Algorithm	176
<b>PART B: CONCAVE MINIMIZATION</b>	<b>179</b>
<b>CHAPTER V. CUTTING METHODS</b>	<b>181</b>
1. A Pure Cutting Algorithm	181
1.1. Valid Cuts and a Sufficient Condition for Global Optimality	182
1.2. Outline of the Method	187
2. Facial Cut Algorithm	190
2.1. The Basic Idea	190
2.2. Finding an Extreme Face of D Relative to M	192
2.3. Facial Valid Cuts	196
2.4. A Finite Cutting Algorithm	198

<b>3. Cut and Split Algorithm</b>	<b>201</b>
3.1. Partition of a Cone	202
3.2. Outline of the Method	203
3.3. Remarks	206
<b>4. Generating Deep Cuts: The Case of Concave Quadratic Functionals</b>	<b>211</b>
4.1. A Hierarchy of Valid Cuts	211
4.2. Konno's Cutting Method for Concave Quadratic Programming	217
4.3. Bilinear Programming Cuts	222
 <b>CHAPTER VI. SUCCESSIVE APPROXIMATION METHODS</b>	 <b>225</b>
<b>1. Outer Approximation Algorithms</b>	<b>225</b>
1.1. Linearly Constrained Problem	226
1.2. Problems with Convex Constraints	234
1.3. Reducing the Sizes of the Relaxed Problems	240
<b>2. Inner Approximation</b>	<b>243</b>
2.1. The (DG) Problem	244
2.2. The Concept of Polyhedral Annexation	245
2.3. Computing the Facets of a Polytope	248
2.4. A Polyhedral Annexation Algorithm	251
2.5. Relations to Other Methods	261
2.6. Extensions	264
<b>3. Convex Underestimation</b>	<b>267</b>
3.1. Relaxation and Successive Underestimation	267
3.2. The Falk and Hoffman Algorithm	269
3.3. Rosen's Algorithm	273
<b>4. Concave Polyhedral Underestimation</b>	<b>278</b>
4.1. Outline of the Method	278
4.2. Computation of the Concave Underestimators	281
4.3. Computation of the Nonvertical Facets	282
4.4. Polyhedral Underestimation Algorithm	285
4.5. Alternative Interpretation	287
4.6. Separable Problems	289
 <b>CHAPTER VII. SUCCESSIVE PARTITION METHODS</b>	 <b>295</b>
<b>1. Conical Algorithms</b>	<b>295</b>
1.1. The Normal Conical Subdivision Process	296
1.2. The Main Subroutine	298
1.3. Construction of Normal Subdivision Processes	300
1.4. The Basic NCS Process	306
1.5. The Normal Conical Algorithm	308
1.6. Remarks Concerning Implementation	312
1.7. Example	315
1.8. Alternative Variants	319
1.9. Concave Minimization with Convex Constraints	323
1.10. Unbounded Feasible Domain	328

1.11. A Class of Exhaustive Subdivision Processes	329
1.12. Exhaustive Nondegenerate Subdivision Processes	335
<b>2. Simplicial Algorithms</b>	<b>342</b>
2.1. Normal Simplicial Subdivision Processes	343
2.2. Normal Simplicial Algorithm	345
2.3. Construction of an NSS Process	347
2.4. The Basic NSS Process	349
2.5. Normal Simplicial Algorithm for Problems with Convex Constraints	351
<b>3. An Exact Simplicial Algorithm</b>	<b>353</b>
3.1. Simplicial Subdivision of a Polytope	353
3.2. A Finite Branch and Bound Procedure	356
3.3. A Modified ES Algorithm	358
3.4. Unbounded Feasible Set	361
<b>4. Rectangular Algorithms</b>	<b>365</b>
4.1. Normal Rectangular Algorithm	366
4.2. Construction of an NRS Process	369
4.3. Specialization to Concave Quadratic Programming	371
4.4. Example	377
<b>CHAPTER VIII. DECOMPOSITION OF LARGE SCALE PROBLEMS</b>	<b>381</b>
<b>1. Decomposition Framework</b>	<b>382</b>
<b>2. Branch and Bound Approach</b>	<b>384</b>
2.1. Normal Simplicial Algorithm	385
2.2. Normal Rectangular Algorithm	388
2.3. Normal Conical Algorithm	390
<b>3. Polyhedral Underestimation Method</b>	<b>391</b>
3.1. Nonseparable Problems	391
3.2. Separable Problems	393
<b>4. Decomposition by Outer Approximation</b>	<b>401</b>
4.1. Basic Idea	401
4.2. Decomposition Algorithm	403
4.3. An Extension	408
4.4. Outer Approximation Versus Successive Partition	412
4.5. Outer Approximation Combined with Branch and Bound	417
<b>5. Decomposition of Concave Minimization Problems over Networks</b>	<b>421</b>
5.1. The Minimum Concave Cost Flow Problem	421
5.2. The Single Source Uncapacitated Minimum Concave Cost Flow (SUCF) Problem	426
5.3. Decomposition Method for (SUCF)	433
5.4. Extension	443

<b>CHAPTER IX. SPECIAL PROBLEMS OF CONCAVE MINIMIZATION</b>	<b>447</b>
1. Bilinear Programming	447
1.1. Basic Properties	448
1.2. Cutting Plane Method	451
1.3. Polyhedral Annexation	456
1.4. Conical Algorithm	458
1.5. Outer Approximation Method	462
2. Complementarity Problems	469
2.1. Basic Properties	470
2.2. Polyhedral Annexation Method for the Linear Complementarity Problem (LCP)	472
2.3. Conical Algorithm for the (LCP)	475
2.4. Other Global Optimization Approaches to (LCP)	483
2.5. The Concave Complementarity Problem	486
3. Parametric Concave Programming	490
3.1. Basic Properties	492
3.2. Outer Approximation Method for (LRCP)	497
3.3. Methods Based on the Edge Property	500
3.4. Conical Algorithms for (LRCP)	508
 <b>PART C: GENERAL NONLINEAR PROBLEMS</b>	 <b>517</b>
 <b>CHAPTER X. D.C. PROGRAMMING</b>	 <b>519</b>
1. Outer Approximation Methods for Solving the Canonical D.C. Programming Problem	519
1.1. Duality between the Objective and the Constraints	520
1.2. Outer Approximation Algorithms for Canonical D.C. Problems	526
1.3. Outer Approximation for Solving Noncanonical D.C. Problems	541
2. Branch and Bound Methods	553
3. Solving D.C. Problems by a Sequence of Linear Programs and Line Searches	558
4. Some Special D.C. Problems and Applications	572
4.1. The Design Centering Problem	572
4.2. The Diamond Cutting Problem	581
4.3. Biconvex Programming and Related Problems	592
 <b>CHAPTER XI. LIPSCHITZ AND CONTINUOUS OPTIMIZATION</b>	 <b>603</b>
1. Brief Introduction into the Global Minimization of Univariate Lipschitz Functions	604
1.1. Saw-Tooth Covers	604
1.2. Algorithms for Solving the Univariate Lipschitz-Problem	609

<b>2. Branch and Bound Algorithms</b>	<b>616</b>
2.1. Branch and Bound Interpretation of Piyavskii's Univariate Algorithm	617
2.2. Branch and Bound Methods for Minimizing a Lipschitz Function over an $n$ -dimensional Rectangle	621
2.3. Branch and Bound Methods for Solving Lipschitz Optimization Problems with General Constraints	632
2.4. Global Optimization of Concave Functions Subject to Separable Quadratic Constraints	634
2.5. Linearly Constrained Global Optimization of Functions with Concave Minorants	645
<b>3. Outer Approximation</b>	<b>653</b>
<b>4. The Relief Indicator Method</b>	<b>662</b>
4.1. Separators for $f$ on $D$	663
4.2. A Global Optimality Criterion	666
4.3. The Relief Indicator Method	670
