

# Table of Contents

<b>Preface</b> .....	V
<b>1. Introduction</b> .....	1
<b>2. Bounded Rationality and Artificial Intelligence</b> .....	7
2.1 Bounded Rationality in Economics .....	7
2.2 Artificially Intelligent Agents in Economic Systems .....	11
2.3 Learning Techniques of Artificially Intelligent Agents .....	13
2.3.1 Genetic Algorithms and Related Techniques .....	13
2.3.2 Classifier Systems .....	13
2.3.3 Neural Networks .....	17
2.3.4 Cellular Automata .....	21
2.4 Some Applications of CI Methods in Economic Systems .....	25
2.4.1 Bidding Strategies in Auctions .....	25
2.4.2 The Iterated Prisoner's Dilemma .....	27
2.4.3 Market Models .....	31
2.4.4 Further Simple Economic Models .....	33
2.5 Potentiality and Problems of CI Techniques in Economics ...	34
<b>3. Genetic Algorithms</b> .....	37
3.1 What are Genetic Algorithms? .....	37
3.2 The Structure of Genetic Algorithms .....	38
3.3 Genetic Operators .....	39
3.3.1 Selection .....	39
3.3.2 Crossover .....	41
3.3.3 Mutation .....	42
3.3.4 Other Operators .....	42
3.3.5 An Example .....	43
3.4 Genetic Algorithms with a Non-Standard Structure .....	44
3.5 Economic Interpretation of Genetic Learning .....	45
3.6 Some Analytical Approaches to Model Genetic Algorithms ...	49
3.6.1 The Schema Theorem .....	49
3.6.2 The Quantitative Genetics Approach .....	52
3.6.3 Markov Chain Models .....	54

<b>4. Genetic Algorithms with a State Dependent Fitness Function</b> .....	61
4.1 State Dependency in Economic Systems .....	61
4.2 A Markov Model for Systems with a State Dependent Fitness Function .....	62
4.3 The Difference Equations Describing the GA .....	67
4.4 Deviation from the Markov Process .....	68
4.5 A Numerical Example .....	72
4.6 Stability of the Uniform States .....	73
4.7 Two-Population Models .....	81
<b>5. Genetic Learning in Evolutionary Games</b> .....	87
5.1 Equilibria and Evolutionary Stability .....	87
5.2 Learning in Evolutionary Games .....	88
5.3 Learning by a Simple Genetic Algorithm .....	91
5.3.1 Rock-Scissors-Paper Games .....	92
5.3.2 A GA Deceptive Game .....	97
5.3.3 Learning in Non Deceptive Games .....	101
5.4 Two-Population Contests .....	104
<b>6. Simulations with Genetic Algorithms in Economic Systems</b> .....	111
6.1 A Model of a Competitive Market .....	111
6.1.1 Pure Quantity Decision .....	114
6.1.2 Exit and Entry Decisions .....	117
6.2 An Overlapping Generations Model with Fiat Money .....	122
6.2.1 Learning of Cyclical Equilibria .....	126
6.2.2 Learning of Sunspot Equilibria .....	130
<b>7. Stability and Encoding</b> .....	133
7.1 The Cobweb Example Revisited .....	133
7.2 Impact of a Change in Encoding and Scaling .....	137
7.3 A Method for Finding Economic Equilibria .....	139
<b>8. Conclusions</b> .....	141
<b>A. Basic Definitions and Results Used</b> .....	143
A.1 Time Homogeneous Markov Chains .....	143
A.2 Nonlinear Difference Equations and Stability .....	145
<b>B. Calculation of the Equilibria of the Evolutionary Games in Chapter 5</b> .....	147
B.1 Rock-Scissor-Paper Games .....	147
B.2 The GA Deceptive Game GAD .....	149
B.3 The Games G1 and G2 .....	150
<b>References</b> .....	151

<b>List of Figures.....</b>	<b>159</b>
<b>List of Tables.....</b>	<b>163</b>
<b>Index .....</b>	<b>165</b>
