Contributors      xi  
Preface          xv

## 1 \_\_\_\_\_

### **The Avian Embryo as a Model in Developmental Studies: Chimeras and *in Vitro* Clonal Analysis**

*Elisabeth Dupin, Catherine Ziller, and Nicole M. Le Douarin*

I. Introduction      1  
II. Quail–Chick Embryonic Chimeras      2  
III. *In Vitro* Cloning of Neural Crest Cells      12  
IV. Summary      29  
References      30

## 2 \_\_\_\_\_

### **Inhibition of Gene Expression by Antisense Oligonucleotides in Chick Embryos *in Vitro* and *in Vivo***

*Aixa V. Morales and Flora de Pablo*

I. Introduction      37  
II. Designing the Antisense Oligodeoxynucleotides      38  
III. Controls to Assess the Specificity of Antisense Oligodeoxynucleotide Effects      40  
IV. Application of Oligodeoxynucleotides to Early Chick Embryos      43  
V. Optimization of Oligodeoxynucleotide Delivery      45  
VI. Concluding Remarks      47  
References      48

## 3 \_\_\_\_\_

### **Lineage Analysis Using Retroviral Vectors**

*Constance L. Cepko, Elizabeth Ryder, Christopher Austin, Jeffrey Golden, and Shawn Fields-Berry*

I. Transduction of Genes via Retrovirus Vectors      51  
II. Production of Virus Stocks for Lineage Analysis      53

III. Replication-Competent Helper Virus	54
IV. Determination of Sibling Relationships	56
V. Procedures	59
References	73

## 4

---

### Use of Dominant Negative Constructs to Modulate Gene Expression

*Giorgio Lagna and Ali Hemmati-Brivanlou*

I. Introduction	75
II. Dominant Negative Mutations	77
III. Generation of Dominant Negative Mutants	78
IV. Interpretation of Dominant Negative Effects	82
V. How to Overproduce a Dominant Negative Mutant	88
VI. Examples of Dominant Negative Mutants	88
VII. Concluding Remarks	95
References	96

## 5

---

### The Use of Embryonic Stem Cells for the Genetic Manipulation of the Mouse

*Miguel Torres*

I. Introduction	99
II. Materials and Instrumentation	100
III. Protocols	100
References	114

## 6

---

### Organoculture of Otic Vesicle and Ganglion

*Juan J. Garrido, Thomas Schimmang, Juan Represa, and Fernando Giráldez*

I. Introduction	115
II. Organotypic Culture of Otic Vesicles and the Study of Growth Factors and Cell Proliferation in the Otic Vesicle	116
III. Culture of Auditory and Vestibular Ganglia: Whole Ganglia and Dissociated Cells	121
IV. Concluding Remarks	126
References	129

---

**7**
**Organoculture of the Chick Embryonic Neuroretina**

*Enrique J. de la Rosa, Begoña Díaz, and Flora de Pablo*

I. Introduction	133
II. Whole Neuroretina Culture	134
III. Evaluation of Cellular Processes in the Whole Neuroretina	137
IV. Evaluation of Cellular Processes in Dissociated Retinal Cells	140
V. Concluding Remarks	142
References	143

---

**8**
**Embryonic Explant and Slice Preparations for Studies of Cell Migration and Axon Guidance**

*Catherine E. Krull and Paul M. Kulesa*

I. Introduction	145
II. Preparing and Culturing Chick Embryo Explants	146
III. Chick Embryo Slice Preparation	151
IV. Preparing and Culturing Mouse Embryo Explants	154
V. Evaluation of Explant and Slice Features	156
VI. Explant and Slice Experimental Perturbations	158
VII. Conclusions	158
References	159

---

**9**
**Culture of Avian Sympathetic Neurons**

*Alexander v. Holst and Hermann Roher*

I. Introduction	161
II. Dissection of Ganglia	162
III. Dissociation of Ganglia	166
IV. Selection of Neurons or Non-neuronal Cells	168
V. Identification of Neuronal and Glial Cell Populations	171
VI. Cell Culture	172
VII. Expression of Exogenous Genes by Transfection	176
VIII. Solutions and Media	178
References	180

**10****Analysis of Gene Expression in Cultured Primary Neurons***Ming-Ji Fann and Paul H. Patterson*

- I. Introduction 183
- II. Culture of Small Numbers of Sympathetic Neurons in Chemically Defined Medium 184
- III. Preparation of RNA and cDNA 186
- IV. Polymerase Chain Reaction 187
- V. Selection of Primers 187
- VI. Specificity of Primers 189
- VII. Effects of Leukemia Inhibitory Factor, Ciliary Neurotrophic Factor, and Depolarization on Cultured Sympathetic Neurons 191
- VIII. Closing Comments 193
- References 193

**11****Selective Aggregation Assays for Embryonic Brain Cells and Cell Lines***Shinichi Nakagawa, Hiroaki Matsunami, and Masatoshi Takeichi*

- I. Introduction 197
- II. Principles of How to Disaggregate and Reaggregate Cells 199
- III. Solutions 200
- IV. Preparation of Single Cell Suspensions 201
- V. Aggregation of Cells 205
- VI. Analyzing the Results 207
- References 209

**12****Flow Cytometric Analysis of Whole Organs and Embryos***José Serna, Belén Pimentel, and Enrique J. de la Rosa*

- I. Introduction 211
- II. Specific Considerations for Whole Organs and Embryos 212
- III. Selected Applications 216
- IV. Concluding Remarks 220
- References 221

## 13

---

### Detection of Multiple Gene Products Simultaneously by *in Situ* Hybridization and Immunohistochemistry in Whole Mounts of Avian Embryos

*Claudio D. Stern*

I. Introduction	223
II. Synthesis of Digoxigenin- and Fluorescein-Labeled Riboprobes by <i>in Vitro</i> Transcription	224
III. Preparation of Embryos	227
IV. Prehybridization, Hybridization, and Post-Hybridization Washes	228
V. Antibody Incubations	230
VI. Detection	231
VII. Timetable for Multiple Color Detection	236
VIII. Photography	237
IX. Histologic Sectioning of Whole Mounts	237
X. Designing Appropriate Controls	238
XI. Trouble Shooting	239
References	242

## 14

---

### Cloning of Genes from Single Neurons

*Catherine Dulac*

I. Introduction: The Cloning of Mammalian Pheromone Receptor Genes	245
II. Tissue Dissociation and Isolation of Single Neurones	249
III. cDNA Synthesis and Amplification	251
IV. Differential Screening of Single Cell cDNA Libraries	254
V. Concluding Remarks	257
References	258

## 15

---

### Methods for Detecting and Quantifying Apoptosis

*Nicola J. McCarthy and Gerard I. Evan*

I. Introduction	259
II. The Problems of Measuring Apoptosis	260
III. Methods for Identifying and Measuring Apoptosis	262
IV. Practical Methods for Detecting and Measuring Apoptosis	263
References	277

# 16

---

## Methods in *Drosophila* Cell Cycle Biology

*Fabian Feiguin, Salud Llamazares, and Cayetano González*

I. Introduction	279
II. Fluorescent <i>in Situ</i> Hybridization to Polytene Chromosomes: Protocol 1	280
III. Fluorescent <i>in Situ</i> Hybridization to Diploid Cells: Protocol 2	282
IV. Immunostaining Embryos: Protocol 3	284
V. Immunostaining Larval Neuroblasts: Protocol 4	286
VI. Immunostaining of Female Meiotic Spindles: Protocol 5	288
VII. Preparing <i>Drosophila</i> Neuroblast Primary Cultures: Protocol 6	289
References	291

# 17

---

## Single Central Nervous System Neurons in Culture

*Juan Lerma, Miguel Morales, and María de los Angeles Vicente*

I. Introduction	293
II. Microculture Preparation: Steps to Follow	294
III. Examples on the Functionality of Microcultured Neurons	296
References	301

# 18

---

## Patch-Clamp Recordings from *Drosophila* Presynaptic Terminals

*Manuel Martínez-Padrón and Alberto Ferrús*

I. Introduction	303
II. Larval Preparation and Dissection	305
III. Synaptic Boutons	305
IV. Electrophysiological Recordings	306
V. Technical Considerations	307
VI. Perspectives	310
References	311
