Preface .....	VII
Prolog: What This Book Is About .....	1
Notation .....	5

---

## Part I. The Classics

---

<b>1. Counting</b> .....	11
1.1 The binomial theorem .....	11
1.2 Selection with repetitions .....	13
1.3 Partitions .....	14
1.4 Double counting .....	14
1.5 The averaging principle .....	16
Exercises .....	19
<b>2. Advanced Counting</b> .....	23
2.1 Bounds on intersection size .....	23
2.2 Zarankiewicz's problem .....	25
2.3 Density of 0-1 matrices .....	27
Exercises .....	29
<b>3. The Principle of Inclusion and Exclusion</b> .....	32
3.1 The principle .....	32
3.2 The number of derangements .....	34
Exercises .....	35
<b>4. The Pigeonhole Principle</b> .....	37
4.1 Some quickies .....	37
4.2 The Erdős-Szekeres theorem .....	38
4.3 Mantel's theorem .....	40
4.4 Turán's theorem .....	41
4.5 Dirichlet's theorem .....	42
4.6 Swell-colored graphs .....	43

4.7	The weight shifting argument	45
4.8	Pigeonhole and resolution	47
4.8.1	Resolution refutation proofs	47
4.8.2	Haken's lower bound	48
	Exercises	51
<b>5.</b>	<b>Systems of Distinct Representatives</b>	<b>55</b>
5.1	The marriage theorem	55
5.2	Two applications	57
5.2.1	Latin rectangles	57
5.2.2	Decomposition of doubly stochastic matrices	58
5.3	Min-max theorems	59
5.4	Matchings in bipartite graphs	60
	Exercises	63
<b>6.</b>	<b>Colorings</b>	<b>65</b>
6.1	Property B	65
6.2	The averaging argument	67
6.2.1	Almost good colorings	67
6.2.2	The number of mixed triangles	68
6.3	Coloring the cube: the algorithmic aspect	71
	Exercises	73

---

## Part II. Extremal Set Theory

---

<b>7.</b>	<b>Sunflowers</b>	<b>79</b>
7.1	The sunflower lemma	79
7.2	Modifications	81
7.2.1	Relaxed core	81
7.2.2	Relaxed disjointness	82
7.3	Applications	83
7.3.1	The number of minterms	83
7.3.2	Small depth formulas	84
	Exercises	86
<b>8.</b>	<b>Intersecting Families</b>	<b>89</b>
8.1	The Erdős-Ko-Rado theorem	89
8.2	Finite ultrafilters	90
8.3	Maximal intersecting families	91
8.4	A Helly-type result	93
8.5	Intersecting systems	93
	Exercises	95

<b>9. Chains and Antichains</b>	97
9.1 Decomposition of posets	97
9.1.1 Symmetric chains	99
9.1.2 Application: the memory allocation problem	100
9.2 Antichains	101
9.2.1 Sperner's theorem	101
9.2.2 Bollobás's theorem	102
9.2.3 Strong systems of distinct representatives	105
9.2.4 Union-free families	106
Exercises	107
<b>10. Blocking Sets and the Duality</b>	109
10.1 Duality	109
10.2 The blocking number	111
10.3 Generalized Helly theorems	112
10.4 Decision trees	114
10.4.1 Depth versus certificate complexity	115
10.4.2 Block sensitivity	116
10.5 The switching lemma	117
10.6 Monotone circuits	121
10.6.1 The lower bounds criterion	122
10.6.2 Explicit lower bounds	125
Exercises	130
<b>11. Density and Universality</b>	133
11.1 Dense sets	133
11.2 Hereditary sets	134
11.3 Universal sets	136
11.3.1 Isolated neighbor condition	137
11.3.2 Paley graphs	138
11.4 Full graphs	140
Exercises	141
<b>12. Witness Sets and Isolation</b>	143
12.1 Bondy's theorem	143
12.2 Average witnesses	144
12.3 The isolation lemma	147
12.4 Isolation in politics: the dictator paradox	150
Exercises	152
<b>13. Designs</b>	153
13.1 Regularity	153
13.2 Finite linear spaces	155
13.3 Difference sets	156
13.4 Projective planes	157

13.4.1	The construction	158
13.4.2	Brüen's theorem	159
13.5	Resolvable designs	161
13.5.1	Affine planes	162
13.5.2	Blocking sets in affine planes	163
	Exercises	165

---

## Part III. The Linear Algebra Method

---

<b>14.</b>	<b>The Basic Method</b>	169
14.1	The linear algebra background	169
14.2	Spaces of incidence vectors	172
14.2.1	Fisher's inequality	172
14.2.2	Inclusion matrices	173
14.2.3	Disjointness matrices	175
14.3	Spaces of polynomials	176
14.3.1	Two-distance sets	177
14.3.2	Sets with few intersection sizes	178
14.3.3	Constructive Ramsey graphs	179
14.3.4	Bollobás theorem – another proof	180
14.4	Combinatorics of linear spaces	181
14.4.1	Universal sets from linear codes	182
14.4.2	Short linear combinations	182
14.5	The flipping cards game	184
	Exercises	186
<b>15.</b>	<b>Orthogonality and Rank Arguments</b>	191
15.1	Orthogonality	191
15.1.1	Orthogonal coding	191
15.1.2	A bribery party	192
15.1.3	Hadamard matrices	194
15.2	Rank arguments	196
15.2.1	Balanced families	196
15.2.2	Lower bounds for boolean formulas	197
	Exercises	203
<b>16.</b>	<b>Span Programs</b>	205
16.1	The model	205
16.2	Span programs and switching networks	206
16.3	Monotone span programs	206
16.3.1	Threshold functions	207
16.3.2	Non-bipartite graphs	208
16.3.3	Odd factors	208
16.3.4	A lower bound for threshold functions	211

16.4 A general lower bound . . . . .	212
16.5 Explicit self-avoiding families . . . . .	214
Exercises . . . . .	216

---

## Part IV. The Probabilistic Method

---

<b>17. Basic Tools . . . . .</b>	<b>221</b>
17.1 Probabilistic preliminaries . . . . .	221
17.2 Elementary tools . . . . .	224
17.3 Advanced tools . . . . .	225
Exercises . . . . .	227
<b>18. Counting Sieve . . . . .</b>	<b>229</b>
18.1 Ramsey numbers . . . . .	229
18.2 Van der Waerden's theorem . . . . .	230
18.3 Tournaments . . . . .	231
18.4 Property B revised . . . . .	231
18.5 The existence of small universal sets . . . . .	232
18.6 Cross-intersecting families . . . . .	233
Exercises . . . . .	236
<b>19. The Lovász Sieve . . . . .</b>	<b>237</b>
19.1 The local lemma . . . . .	237
19.2 Counting sieve for almost independence . . . . .	239
19.3 Applications . . . . .	240
19.3.1 Colorings . . . . .	240
19.3.2 Hashing functions . . . . .	243
Exercises . . . . .	244
<b>20. Linearity of Expectation . . . . .</b>	<b>245</b>
20.1 Hamilton paths in tournaments . . . . .	245
20.2 Sum-free sets . . . . .	246
20.3 Dominating sets . . . . .	247
20.4 The independence number . . . . .	247
20.5 Low degree polynomials . . . . .	248
20.6 Maximum satisfiability . . . . .	250
20.7 Hashing functions . . . . .	251
20.8 Submodular complexity measures . . . . .	253
20.9 Discrepancy . . . . .	256
20.9.1 Example: matrix multiplication . . . . .	259
Exercises . . . . .	260

<b>21. The Deletion Method</b>	263
21.1 Ramsey numbers	263
21.2 Independent sets	264
21.3 Coloring large-girth graphs	265
21.4 Point sets without obtuse triangles	266
21.5 Covering designs	268
21.6 Affine cubes of integers	269
Exercises	272
<b>22. The Second Moment Method</b>	273
22.1 The method	273
22.2 Separators	274
22.3 Threshold for cliques	276
Exercises	278
<b>23. The Entropy Function</b>	279
23.1 Basic properties	279
23.2 Subadditivity	280
23.3 Combinatorial applications	282
Exercises	285
<b>24. Random Walks</b>	286
24.1 Satisfying assignments for 2-CNF	286
24.2 The best bet for simpletons	288
24.3 Small formulas for complicated functions	290
24.4 Random walks and search problems	294
24.4.1 Long words over a small alphabet	295
24.4.2 Short words over a large alphabet	296
Exercises	298
<b>25. Randomized Algorithms</b>	299
25.1 Zeroes of multivariate polynomials	299
25.2 Verifying the equality of long strings	302
25.3 The equivalence of branching programs	302
25.4 A min-cut algorithm	304
Exercises	306
<b>26. Derandomization</b>	307
26.1 The method of conditional probabilities	307
26.1.1 A general frame	308
26.1.2 Splitting graphs	309
26.1.3 Maximum satisfiability: the algorithmic aspect	310
26.2 The method of small sample spaces	312
26.3 Sum-free sets: the algorithmic aspect	316
Exercises	317

---

## Part V. Fragments of Ramsey Theory

---

<b>27. Ramsey's Theorem</b> .....	321
27.1 Colorings and Ramsey numbers .....	321
27.2 Ramsey's theorem for graphs .....	322
27.3 Ramsey's theorem for sets .....	324
27.4 Schur's theorem .....	326
27.5 Geometric application: convex polygons .....	327
Exercises .....	327
<b>28. Ramseyan Theorems for Numbers</b> .....	329
28.1 Sum-free sets .....	329
28.2 Zero-sum sets .....	332
28.3 Szemerédi's cube lemma .....	334
Exercises .....	336
<b>29. The Hales–Jewett Theorem</b> .....	337
29.1 The theorem and its consequences .....	337
29.1.1 Van der Waerden's theorem .....	338
29.1.2 Gallai–Witt's Theorem .....	339
29.2 Shelah's proof of HJT .....	340
29.3 Application: multi-party games .....	343
29.3.1 Few players: the hyperplane problem .....	344
29.3.2 Many players: the matrix product problem .....	348
Exercises .....	349
<b>Epilog: What Next?</b> .....	351
<b>References</b> .....	353
<b>Name Index</b> .....	367
<b>Subject Index</b> .....	371
