

Table of Contents

1	Regularity in several variables	1
§1	Geometric models of divisorially valued function fields.	2
§2	Logarithmic differential operators.	11
§3	Connections regular along a divisor.	15
§4	Extensions with logarithmic poles.	22
§5	Regular connections: the global case.	29
§6	Exponents.	32
	Appendix A: A letter of Ph. Robba (Nov. 2, 1984).	40
	Appendix B: Models and log schemes.	42
2	Irregularity in several variables	49
§1	Spectral norms.	51
§2	The generalized Poincaré-Katz rank of irregularity.	57
§3	Some consequences of the Turrittin-Levelt-Hukuhara theorem.	69
§4	Newton polygons.	73
§5	Stratification of the singular locus by Newton polygons.	79
§6	Formal decomposition of an integrable connection at a singular divisor.	85
§7	Cyclic vectors, indicial polynomials and tubular neighborhoods.	97
3	Direct images (the Gauss-Manin connection)	103
§1	Elementary fibrations.	105
§2	Review of connections and De Rham cohomology.	110
§3	Dévissage.	117
§4	Generic finiteness of direct images.	123
§5	Generic base change for direct images.	128
§6	Coherence of the cokernel of a regular connection.	132
§7	Regularity and exponents of the cokernel of a regular connection.	138
§8	Proof of the main theorems: finiteness, regularity, monodromy, base change (in the regular case).	140
	Appendix C: Berthelot's comparison theorem on \mathcal{O}_X - vs. \mathcal{D}_X -linear duals.	142
	Appendix D: Introduction to Dwork's algebraic dual theory.	146
4	Complex and p-adic comparison theorems	171
§1	Review of analytic connections and De Rham cohomology.	172
§2	Abstract comparison criteria.	175
§3	Comparison theorem for algebraic vs. complex-analytic cohomology.	177

§4	Comparison theorem for algebraic vs. rigid-analytic cohomology (regular coefficients).....	182
§5	Rigid-analytic comparison theorem in relative dimension one.....	184
§6	Comparison theorem for algebraic vs. rigid-analytic cohomology (irregular coefficients).....	192
§7	The relative non-archimedean Turrittin theorem.....	202
Appendix E:	Riemann's "existence theorem" in higher dimension, an elementary approach.....	206
