1	Introduction	1
2	The General Concept	6
3	Wavelets	13
3.1	Preliminaries	13
3.2	Multiscale Decomposition of Function Spaces — Uniform Refinements . .	14
3.2.1	Multiresolution of L_2	14
3.2.2	Multiresolution of Sobolev Spaces and Norm Equivalences	21
3.2.3	Reverse Cauchy–Schwarz Inequalities	23
3.2.4	Preconditioning	24
3.2.5	An Example of Biorthogonal Wavelets on \mathbb{R}	25
3.3	Wavelets on an Interval	27
3.4	Wavelets on Manifolds	29
3.4.1	Domain Decomposition Approaches	29
3.4.2	The Cartesian Product Approach	31
3.5	Multiscale Decomposition of Function Spaces — Non–Uniform Refinements	33
4	Elliptic Boundary Value Problems	34
4.1	General Saddle Point Problems	34
4.1.1	The Continuous Abstract Saddle Point Problem	34
4.1.2	Discretization and Preconditioning	36
4.1.3	The Discrete Finite Problem	37
4.1.4	Error Estimates and Iterative Solution	38
4.2	Elliptic Boundary Value Problems as Saddle Point Problems	39
4.2.1	The Fictitious Domain—Lagrange Multiplier Approach	40
4.2.2	Trace Theorems	44
4.2.3	Conditions Ensuring Stability of the Discretizations: General Remarks	46
4.2.4	Conditions Ensuring Stability of the Discretizations: The LBB Condition	47
4.3	Numerical Studies	55
5	Least Squares Problems	69
5.1	Introduction	69
5.2	General Setting	71
5.3	Least Squares Formulation of General Saddle Point Problems	73
5.4	Wavelet Representation of Least Squares Systems	76

5.5	Truncation	82
5.6	Preconditioning and Computational Work	87
5.7	Numerical Experiments	88
6	Control Problems	95
6.1	Introduction	95
6.2	The Continuous Case: Two Coupled Saddle Point Problems	99
6.3	Discretization and Preconditioning	106
6.4	The Discrete Finite-Dimensional Problem	109
6.5	Iterative Methods for WSPP($\hat{\mathbf{A}}, \mathbf{\Lambda}$)	110
6.6	Alternative Iterative Methods for the Coupled System	111
6.6.1	Semi-Iterative Methods	112
6.6.2	Block Kaczmarz Iteration	113
6.6.3	A Fully Iterative Method for Coupled Saddle Point Problems . . .	114
6.6.4	Computational Work for ALGORITHM OUTIT	121
6.6.5	A Numerical Example	125
6.7	Outlook into Nonlinear Problems and Adaptive Strategies	128
