5 The neural crest 126

Early determination and individuation of the neural crest	127
Trunk neural crest	129
Migration pathways	129
Guidance molecules	130
Segmental crest migration through the somites	131
Integrins	132
Neural crest cell differentiation	132
Dorsal root gangliogenesis	133
Development of sympathetic neurons	133
Ligand–receptor systems involved in migration, proliferation and survival	135
Cranial neural crest	137
Prepatterning of the cranial crest	138
Migration of the cranial neural crest into the branchial arches	139
Influence of the local environment on cell type differentiation	142
Neurogenic placodes	143
Key points	144
General reading	145
References	146

6 Glia and myelination 149

Determination of glial fate in the CNS	150
Glial origins and migration in the neural tube	152
Control of glial numbers in the CNS	153
Schwann cells and the neuregulins	154
Association of axons with Schwann cells	156
Myelination	156
Ion channels	158
Myelination by oligodendrocytes	159

Trophic interactions between Schwann cells and neurons	159
Perineurium	160
The blood-brain barrier	160
Glial mutations in mouse and man	161
Key points	163
General reading	164
References	164

7 Development of cerebral cortex and cerebellar cortex 169

Development of cerebral cortex	169
Proliferation and production of cortical neurons	170
Migration of cortical neurons	174
Cortical lamination and differentiation	175
Reeler mice, reelin and human abnormalities of migration/lamination	177
Migration of olfactory bulb precursors	178
Regionalization of cerebral cortex	180
Cortical morphogenesis	181
Development of cerebellar cortex	181
Granule cell differentiation	182
Granule cell migration and radial glia	183
Purkinje cell migration and differentiation	184
Cerebellar compartments	185
Mutations affecting cerebellar development	186
Key points	187
General reading	189
References	189

8 Development of sense organs 194

The eye	194
The compound eye of the fly and some evolutionary considerations	194
Photoreceptor differentiation	195
Influence of axons on neurogenesis in retinal target tissues	200
The vertebrate eye	200
The inner ear	205
Development of the lateral line	207
Development of taste buds	208
Development of olfactory receptors	209
Development of peripheral sense organs	209
Key points	211
General reading	213
