Section A: Introduction

1	Towards Ecological Relevance – Progress and Pitfalls in the Path Towards an Understanding of Mycorrhizal Functions in Nature . . .	3
	D.J. READ	
1.1	Summary	3
1.2	Introduction	4
1.3	The Platform Provided by Reductionist Approaches	4
1.4	Approaches to Examination of Mycorrhizal Function at the Community Level	8
1.4.1	The Microcosm Approach	10
1.4.2	The Field Approach	21
1.5	Conclusion	23
	References	24

Section B: Ecophysiology, Ecosystems Effects and Global Change

2	Carbon and Nutrient Fluxes Within and Between Mycorrhizal Plants	33
	S.W. SIMARD, D. DURALL, M. JONES	
2.1	Summary	34
2.2	Introduction	34
2.3	Ecto-mycorrhiza and Nutrient Uptake	35
2.3.1	Quantitative Effects of Ecto-mycorrhiza on Nutrient Uptake by Plants	35
2.3.2	Mechanisms of Increased Nutrient Uptake	39
2.3.3	Transport of Nutrients Within the Ecto-mycorrhizal Fungal Mycelium	43
2.4	Carbon Flux in Ecto-mycorrhizal Plants	44

2.4.1	Mechanism of Carbon Exchange Between Symbionts	44
2.4.2	Quantification of Belowground C Partitioning	45
2.4.3	Biological and Physical Effects on Belowground Carbon Partitioning	46
2.5	Carbon and Nutrient Transfers Between Plants	47
2.5.1	Hyphal Links Between Plants	47
2.5.2	Carbon and Nutrient Transfer Between Plants	50
2.5.3	Factors Regulating Carbon and Nutrient Transfer	55
2.6	Conclusions on the Ecological Significance of Interplant Transfer	59
References	61

3

**Function and Diversity of Arbuscular Mycorrhizae
in Carbon and Mineral Nutrition**
75

I. JAKOBSEN, S.E. SMITH, F.A. SMITH

3.1	Summary	75
3.1	Introduction	76
3.2	Carbon Nutrition and Growth of the Fungus	76
3.3	Mineral Nutrition of the Fungus	79
3.4	Nutrition of the Plant: The Autotrophic Symbiont	82
3.5	Mycorrhizal Responsiveness	84
3.6	From Individual Symbioses to Plant Communities	87
References	88

4

**Foraging and Resource Allocation Strategies
of Mycorrhizal Fungi in a Patchy Environment**
93

P.A. OLSSON, I. JAKOBSEN, H. WALLANDER

4.1	Summary	93
4.2	Introduction	94
4.3	The Mycorrhizal Mycelium	98
4.3.1	Structures and Growth Rates	98
4.3.2	Density of the Mycelium Front	99
4.3.3	Energy Storage	100
4.4	Foraging of the Ecto-mycorrhizal Mycelium	100
4.4.1	Response to Inorganic Nutrients	100
4.4.2	Response to Organic Nutrient Sources	101
4.4.3	Response to Plant Roots	102
4.5	Foraging of the Arbuscular Mycorrhizal Mycelium	102
4.5.1	Response to Inorganic Nutrients	102

Contents		XI
4.5.2	Response to Organic Material and Compounds	103
4.5.3	Response to Plant Roots	104
4.6	Differences in Foraging Strategies Between Arbuscular Mycorrhizal and Ecto-mycorrhizal Fungi	104
4.7	Models and Theories on the Foraging of Mycorrhizal Fungi	105
4.8	Conclusions and Future Perspectives	109
References	110
 5	 The Role of Various Types of Mycorrhizal Fungi in Nutrient Cycling and Plant Competition	 117
	R. AERTS	
5.1	Summary	117
5.2	Introduction	118
5.3	Soil Nutrient Sources	120
5.4	Different Mycorrhizal Types Can Tap Different Soil Nutrient Sources	122
5.5	Vascular Plant ¹⁵ N Natural Abundance as an Indicator for the Type of Mycorrhiza-Mediated Plant Nutrition? . . .	124
5.6	A Conceptual Model for Mycorrhizal Impacts on Plant Competition and Coexistence	125
5.7	Effects of Increased Nitrogen Deposition	127
5.8	Plant-Soil Feedbacks: Mineralization or 'Organicisation'? . .	129
5.9	Future Challenges	130
References	131
 6	 Global Change and Mycorrhizal Fungi	 135
	M. RILLIG, K.K. TRESEDER, M.F. ALLEN	
6.1	Summary	135
6.2	Introduction	136
6.2.1	What Is Global Change?	136
6.2.2	Rationale for Considering Mycorrhizae in Global Change Biology	138
6.3	Global Change: Multiple Factors	139
6.3.1	Elevated Atmospheric CO ₂	139
6.3.2	Nitrogen Deposition	143
6.3.3	Altered Precipitation and Temperature	144
6.3.4	Ozone	147
6.3.5	UV Radiation	148
6.4	Global Change Factor Interactions	149

6.5 Long-Term Versus Short-Term Responses 150

6.6 Global Change and Effects on Symbionts 151

6.7 Conclusions 152

References 153

Section C: Biodiversity, Plant and Fungal Communities

**7 Diversity of Ecto-mycorrhizal Fungal Communities
in Relation to the Abiotic Environment 163**

S. ERLAND, A.F.S. TAYLOR

7.1 Summary 163

7.2 Introduction 164

7.3 Natural Abiotic Factors Influencing Ecto-mycorrhizal
Community Structure 172

7.3.1 Edaphic Factors 172

7.3.2 Soil Organic Matter and Spatial Heterogeneity 173

7.3.3 Moisture 175

7.3.4 pH 176

7.3.5 Temperature 177

7.3.6 Wildfire 177

7.4 Effects of Pollution and Forest Management Practices
on Ecto-mycorrhizal Fungal Communities 179

7.4.1 Elevated CO₂ 179

7.4.2 Ozone 180

7.4.3 Heavy Metals 180

7.4.4 N-Deposition and Fertilisation 181

7.4.5 Acidification 184

7.4.6 Liming 185

7.4.7 Wood Ash Application and Vitality Fertilisation 186

7.5 Conclusions 187

7.6 Future Progress 192

16 Specificity in the Arbuscular Mycorrhizal Symbiosis 415
I.R. SANDERS

16.1 Summary 416

16.2 Introduction 416

16.3 Definitions of Specificity 417

16.4 Why Is Specificity in the Mycorrhizal
Symbiosis Ecologically Interesting? 417

16.5 Theoretical Considerations on the Evolution
of Specificity in Mutualistic Symbioses 419

16.6 Why Do We Not Already Know Whether Specificity Exists? . 421

16.7 Evidence Supporting a Lack of Specificity 423

16.7.1 Arbuscular Mycorrhizal Fungi Have a Broad Host Range . . 423

16.7.2 A Systematic Perspective 424

16.7.3 Repeatable Patterns of Arbuscular Mycorrhizal Fungal
Community Structure 425

16.7.4 Physiological Evidence 425

16.8 Evidence Supporting Specificity 425

16.8.1 Arbuscular Mycorrhizal Fungal Effects on Plant Fitness . . 425

16.8.2 Plant Species Effects on Fungal Fitness 426

16.9 What Information Is Missing
and Which Experiments Are Needed? 428

16.9.1 Arbuscular Mycorrhizal Fungal Benefit from Specific Hosts 428

16.9.2 Reciprocal Benefit Between Plant Species
and Fungal Species 428

16.9.3 A Genetic Basis for Specificity in Plants 429

16.9.4 A Genetic Basis for Specificity
in Arbuscular Mycorrhizal Fungi 430

16.9.5 The Importance of the Hyphal Network
for Understanding Specificity 433

16.10 Conclusions 434

References 434
