

# **Brief Contents**

*CHAPTER 1 Biological Psychology: Scope and Outlook 1*

## ***PART 1: Biological Foundations of Behavior 23***

*CHAPTER 2 Functional Neuroanatomy: The Nervous System and Behavior 25*

*CHAPTER 3 Neurophysiology: Conduction, Transmission, and Integration of Neural Signals 57*

*CHAPTER 4 Psychopharmacology: Neurotransmitters, Drugs, and Behavior 87*

*CHAPTER 5 Hormones and the Brain 117*

## ***PART 2: Evolution and Development of the Nervous System 147***

*CHAPTER 6 Evolution of Brain and Behavior 149*

*CHAPTER 7 Life-Span Development of the Brain and Behavior 177*

## ***PART 3: Perception and Action 211***

*CHAPTER 8 General Principles of Sensory Processing, Touch, and Pain 213*

*CHAPTER 9 Hearing, Vestibular Perception, Taste, and Smell 247*

*CHAPTER 10 Vision: From Eye to Brain 281*

*CHAPTER 11 Movements and Actions 323*

## ***PART 4: The Regulation of Behavior 363***

*CHAPTER 12 Sex: Evolutionary, Hormonal, and Neural Bases 363*

*CHAPTER 13 Homeostasis: Active Regulation of Internal States 399*

*CHAPTER 14 Biological Rhythms, Sleep, and Dreaming 433*

## ***PART 5: Emotions and Mental Disorders 467***

*CHAPTER 15 Emotions, Aggression, and Stress 469*

*CHAPTER 16 Psychopathology: Biological Bases of Behavior Disorders 503*

## ***PART 6: Cognitive Neuroscience 535***

*CHAPTER 17 Learning and Memory: Biological Perspectives 537*

*CHAPTER 18 Learning and Memory: Neural Mechanisms 571*

*CHAPTER 19 Language and Cognition 607*

***Afterword: The Ever-Changing Brain 643***

# ***Contents***

## ***Chapter 1 Biological Psychology: Scope and Goals***

- What Is Biological Psychology? 2
- Five Viewpoints Explore the Biology of Behavior 4
- Three Approaches Relate Brain and Behavior 6
- Neural Plasticity: Behavior Can Change the Brain 8
- Biological Psychologists Use Several Levels of Analysis 10
- A Preview of the Book: Fables and Facts about the Brain 11
- Neuroscience Contributes to Our Understanding of Psychiatric Disorders 14

## ***PART 1: Biological Foundations of Psychology***

### ***Chapter 2 Functional Neuroanatomy: The Nervous System and the Brain***

- On a Small Scale, the Nervous System Is Composed of Cells 26
- On a Large Scale, the Nervous System Consists of Central and Peripheral Divisions 35
- Brain Structures Can Be Described on the Basis of Function 45
- The Brain Is Well Protected and Has an Abundant Blood Supply 50
- Newer Imaging Techniques Allow Us to Look into the Living Human Brain 52

## *e and Outlook 1*

Laboratory and Clinical Approaches Complement Each Other 14

Animal Research Makes Vital Contributions 15

The History of Research on the Brain and Behavior Begins in Antiquity 16

*Recommended Reading* 21

**BOX 1.1 WE ARE ALL ALIKE AND WE ARE ALL DIFFERENT** 5

**BOX 1.2 IS BIGGER BETTER? THE CASE OF THE BRAIN AND INTELLIGENCE** 20

## *of Behavior*

## *The Nervous System and Behavior 25*

*Summary* 55

*Recommended Reading* 56

**BOX 2.1 NEUROANATOMICAL METHODS PROVIDE WAYS TO MAKE SENSE OF THE BRAIN** 28

**BOX 2.2 THREE CUSTOMARY ORIENTATIONS FOR VIEWING THE BRAIN AND BODY** 37

**BOX 2.3 ISOLATING SPECIFIC BRAIN ACTIVITY** 55

## ***Chapter 3 Neurophysiology: Conduction of Neural Signals 57***

- Electrical Signals Are the Vocabulary of the Nervous System 58
- The Sequence of Transmission Processes at Chemical Synapses 73
- Neurons and Synapses Combine to Make Circuits 78
- Gross Electrical Activity of the Human Brain 82

## ***Chapter 4 Psychopharmacology: Neurotr***

- The Search for Chemical Transmitters 88
- Neurotransmitter Systems Form a Complex Array in the Brain 89
- Research on Drugs Ranges from Molecular Processes to Effects on Behavior 95
- Drugs Affect Each Stage of Neural Conduction and Synaptic Transmission 98
- Drugs That Affect the Brain Can Be Divided into Functional Classes 100

## ***Chapter 5 Hormones and the Brain 117***

- Hormones Act in a Great Variety of Ways throughout the Body 118
- Hormones Act on a Wide Variety of Cellular Mechanisms 126
- Each Endocrine Gland Secretes Specific Hormones 130
- Hormones Affect Behavior in Many Different Ways 143
- Hormonal and Neural Systems Interact to Produce Integrated Responses 144

## ***PART 2: Evolution and Developme***

### ***Chapter 6 Evolution of Brain and Behavi***

- Why Should We Study Other Species? 150
- How Closely Related Are Two Species? 151
- Comparative Methods Help Us Study the Biological Mechanisms of Behavior 156
- Nervous Systems Differ Widely in Structure 159

## ***, Transmission, and Integration***

*Summary* 84

*Recommended Reading* 85

**BOX 3.1 ELECTRICAL SYNAPSES WORK WITH NO TIME DELAY** 70

**BOX 3.2 SEIZURE DISORDERS** 83

## ***Transmitters, Drugs, and Behavior*** 87

**Drug Abuse Is Pervasive** 108

*Summary* 115

*Recommended Reading* 115

**BOX 4.1 PATHWAYS FOR NEUROTRANSMITTER SYNTHESIS** 91

**BOX 4.2 A STAR AMONG RECEPTOR MOLECULES** 94

**BOX 4.3 THE TERMINOLOGY OF SUBSTANCE-RELATED DISORDERS** 109

*Summary* 145

*Recommended Reading* 146

**BOX 5.1 TECHNIQUES OF MODERN BEHAVIORAL ENDOCRINOLOGY** 122

**BOX 5.2 STRESS AND GROWTH: PSYCHOSOCIAL DWARFISM** 136

## ***ent of the Nervous System***

*for* 149

**The Evolution of Vertebrate Brains Can Be Related to Changes in Behavior** 165

*Summary* 175

*Recommended Reading* 175

**BOX 6.1 TO EACH ITS OWN SENSORY WORLD** 157

**BOX 6.2 WHY SHOULD WE STUDY PARTICULAR SPECIES?** 160

## ***Chapter 7 Life-Span Development of t***

Growth and Development of the Brain Are Orderly Processes 178

Development of the Nervous System Can Be Divided into Six Distinct Stages 180

Glial Cells Provide Myelin, Which Is Vital for Brain Function 193

Growth and Development of the Brain Reflect the Interaction of Intrinsic and Extrinsic Factors 194

Experience Is an Important Influence on Brain Development 197

Maldevelopment of the Human Brain Impairs Behavior 202

## ***PART 3: Perception and Action***

### ***Chapter 8 General Principles of Sensor***

#### **Sensory Processing 214**

All Sensory Systems Follow the Same Basic Plan 214

Different Species Detect Different Aspects of the World with Similar Sensory Systems 216

Sensory Information Processing Is Selective and Analytical 219

### ***Chapter 9 Hearing, Vestibular Percepti***

#### **Hearing 248**

Each Part of the Ear Performs a Specific Function in Hearing 249

Auditory System Pathways Run from the Brainstem to the Cortex 256

Two Main Theories Describe How We Discriminate Pitch 258

One Ear Can Localize Sounds, but Two Ears Can Do It Better 259

The Auditory Cortex Performs Complex Tasks in the Perception of Sound 261

Deafness Is a Major Disorder of the Nervous System 263

#### **Vestibular Perception 266**

The Receptor Mechanisms for the Vestibular System Are in the Inner Ear 266

## ***he Brain and Behavior 177***

The Brain Continues to Change As We Grow Older

Two Timescales Are Needed to Describe Brain Development 208

*Summary 209*

*Recommended Reading 210*

**BOX 7.1 DEGENERATION AND REGENERATION OF NERVOUS TISSUE 185**

**BOX 7.2 THE FROG RETINOTECTAL SYSTEM DEMONSTRATES THE INTERPLAY OF INTRINSIC AND EXTRINSIC FACTORS IN NEURAL DEVELOPMENT 192**

**BOX 7.3 TRANSGENIC AND KNOCKOUT MICE 198**

## ***ry Processing, Touch, and Pain 213***

**Touch and Pain 228**

Touch Includes a Variety of Sensations 229

Pain Is an Unpleasant but Adaptive Experience

*Summary 244*

*Recommended Reading 245*

## ***ion, Taste, and Smell 247***

Evolution Has Shaped the Auditory and Vestibular End Organs 268

Nerve Fibers from the Vestibular Portion of the Vestibulocochlear Nerve Synapse in the Brainstem 270

Some Forms of Vestibular Excitation Produce Motion Sickness 268

**The Chemical Senses: Taste and Smell 266**

Chemicals in Tastants Elicit Taste Sensations 272

Chemicals in the Air Elicit Odor Sensations 272

*Summary 278*

*Recommended Reading 279*

**BOX 9.1 THE BASICS OF SOUND 248**

**BOX 9.2 WHY DO SNAKES HAVE FORKED TONGUES? 250**

## ***Chapter 10 Vision: From Eye to Brain***

Vision Provides Information about the Form, Color, Location, Movement, and Identity of Objects 282

The Eye Is Both an Optical Device and a Neural Organ 286

Neural Signals Travel from the Retina to Several Brain Regions 295

Neurons at Different Levels of the Visual System Have Very Different Receptive Fields 298

Area V1 Is Organized in Columns and Slabs 307

Color Vision Depends on Special Channels from the Retinal Cones through Cortical Area V4 310

Perception of Visual Motion Is Analyzed by a Special System That Includes Cortical Area V5 315

## ***Chapter 11 Motor Control and Plasticity***

The Behavioral View 324

The Control Systems View 326

The Neurobiological View 329

Movements Are Controlled at Several Nervous System Levels 337

Disorders of Muscle, Spinal Cord, or Brain Can Disrupt Movement 349

Sensory and Motor Representations Overlap in Some Places 357

## ***PART 4: The Regulation of Behavior***

### ***Chapter 12 Sex: Evolutionary, Hormonal, and Social Influences***

**Sexual Behavior 364**

Reproductive Behavior Can Be Divided into Four Stages 364

The Neural Circuitry of the Brain Regulates Reproductive Behavior 368

Human Reproduction Brings Gametes Together 370

Pheromones Both Prime and Activate Reproductive Behaviors 373

**Why Are There Two Sexes? 374**

Sexual Reproduction Helps Combine Beneficial Mutations 374

Visual Attention Involves Both Striate and Extrastriate Cortex 316

Are the Many Cortical Visual Areas Organized into Two Major Systems? 317

Visual Neuroscience Can Be Applied to Alleviate Some Visual Deficiencies 318

*Summary* 320

*Recommended Reading* 321

**BOX 10.1 THE BASICS OF LIGHT** 284

**BOX 10.2 EYES WITH LENSES HAVE EVOLVED IN SEVERAL PHYLA** 296

**BOX 10.3 DOES FORMING A MENTAL IMAGE REQUIRE ACTIVATION OF PRIMARY VISUAL CORTEX?** 304

## ity 323

We Can Trace a Choice Response from Input to Output 357

*Summary* 358

*Recommended Reading* 359

**BOX 11.1 MOVEMENTS AND ACTS ARE SHAPED AND MODIFIED BY LEARNING** 328

**BOX 11.2 CORTICAL NEURONS CONTROL MOVEMENTS OF A ROBOTIC ARM** 347

**BOX 11.3 THE FROZEN ADDICTS** 353

## ior

## al, and Neural Bases 363

Males and Females Often Adopt Different Reproductive Strategies 376

Mating Systems Can Be Classified into Four Basic Types 378

Sexual Selection Accentuates Differences between the Sexes 379

### **Sexual Differentiation 381**

The Sex of an Individual Is Determined Early in Life 381

How Should We Define Gender—by Genes, Gonads, Genitals, or the Brain? 387

Gonadal Hormones Direct Sexual Differentiation of the Brain and Behavior 387

Social Influences Affect Sexual Differentiation of the Nervous System 394

Do Early Gonadal Hormones Masculinize Human Behaviors in Adulthood? 395

*Summary* 397

## ***Chapter 13 Homeostasis: Active Regulation***

Homeostasis Maintains Internal States within a Critical Range 400

### **Temperature Regulation 401**

Body Temperature Is a Critical Condition for All Biological Processes 401

Some Animals Generate Heat; Others Must Obtain Heat from the Environment 402

Which Behaviors Can Adjust Body Temperature? 406

The Brain Monitors and Regulates Body Temperature 409

### **Fluid Regulation 411**

Our Cells Evolved to Function in Seawater 411

Two Internal Cues Trigger Thirst 414

Homeostatic Regulation of Salt Is Required for Effective Regulation of Water 417

## ***Chapter 14 Biological Rhythms, Sleep, and Circadian Rhythms***

### **Biological Rhythms 434**

Many Animals Show Daily Rhythms in Activity and Physiological Measures 434

An Endogenous Circadian Clock Is Located in the Hypothalamus 435

Many Biological Events Display Rhythms Shorter than a Day 440

Animals Use Circannual Rhythms to Anticipate Seasonal Changes 441

### **Sleeping and Waking 441**

Human Sleep Exhibits Different Stages 442

The Sleep of Different Species Provides Clues about the Evolution of Sleep 447

*Recommended Reading 398*

**BOX 12.1 EVOLUTIONARY PSYCHOLOGY 381**

**BOX 12.2 THE PARADOXICAL SEXUAL DIFFERENTIATION OF  
THE SPOTTED HYENA 391**

**BOX 12.3 WHAT DETERMINES A PERSON'S SEXUAL  
ORIENTATION? 396**

*Regulation of Internal States 399*

**Food and Energy Regulation 418**

Nutrient Regulation Requires the Anticipation of  
Future Needs 418

Insulin Is Crucial for the Regulation of Body  
Metabolism 421

Experience Protects Us from Toxins in Food 423

There Is Apparently No Single Satiety Center or  
Hunger Center in the Brain 424

Anorexia Nervosa and Bulimia Are Life-Threatening  
Eating Disorders 429

*Summary 431*

*Recommended Reading 432*

**BOX 13.1 BODY FAT STORES ARE TIGHTLY REGULATED  
AFTER SURGICAL REMOVAL OF FAT 430**

*Sleep and Dreaming 433*

Our Sleep Patterns Change across the Life Span

Manipulating Sleep Reveals an Underlying  
Structure 450

At Least Three Interacting Neural Systems Underlie  
Sleep 452

What Are the Biological Functions of Sleep? 455

Sleep Disorders Can Be Serious, Even Life-  
Threatening 459

*Summary 464*

*Recommended Reading 465*

**BOX 14.1 SLEEP DEPRIVATION CAN BE FATAL 457**

## ***PART 5: Emotions and Mental Disorders***

### ***Chapter 15 Emotions, Aggression, and Mental Disorders***

What Are Emotions? 470

Broad Theories of Emotion Emphasize Bodily Responses 470

Facial Expressions Reveal Emotional States 472

Emotions from the Comparative/Evolutionary Viewpoint 475

Individuals Differ in Their Emotional Responsiveness 477

Autonomic Responses Are Elicited by Emotion-Provoking Stimuli 477

### ***Chapter 16 Psychopathology: Biological and Psychological Perspectives***

The Toll of Psychiatric Disorders Is Huge 504

Schizophrenia Is the Major Neurobiological Challenge in Psychiatry 505

Autism Is a Disorder of Social Competence 517

Depression Is a Major Psychiatric Disorder 517

There Are Several Types of Anxiety Disorders 525

Neurosurgery Has Been Used to Treat Psychiatric Disorders 531

## ***PART 6: Cognitive Neuroscience***

### ***Chapter 17 Learning and Memory: Biological and Psychological Perspectives***

Many Kinds of Brain Damage Can Impair Memory 538

There Are Several Kinds of Memory and Learning 542

Even "Simple" Learning May Be Complex 542

Memory Has Temporal Stages: Short, Intermediate, and Long 545

Different Regions of the Brain Process Different Aspects of Memory 549

Brain Imaging Provides New Insights about Regions Involved in Different Kinds of Memories 557

# **Disorders**

## ***Stress 469***

**Distinct Brain Circuits Mediate or Control Emotions 478**

**Neural Circuitry, Hormones, and Synaptic Transmitters  
Mediate Violence and Aggression 488**

**Stress Activates Many Bodily Responses 492**

**Stress and Emotions Are Related to Some Human  
Diseases 494**

***Summary 500***

***Recommended Reading 500***

**BOX 15.1 LIE DETECTOR? 478**

## ***Neural Bases of Behavior Disorders 503***

**Prions, Mad Cows, and Creutzfeldt–Jakob Disease 532**

***Summary 533***

***Recommended Reading 534***

**BOX 16.1 LONG-TERM EFFECTS OF ANTIPSYCHOTIC  
DRUGS 515**

**BOX 16.2 THE SEASON TO BE DEPRESSED 524**

**BOX 16.3 TICS, TWITCHES, AND SNORTS: THE UNUSUAL  
CHARACTER OF TOURETTE’S SYNDROME 530**

## ***Biological Perspectives 537***

**Comparative Approaches Yield Insights about the  
Evolution of Learning and Memory 562**

**Learning and Memory Change throughout Life 566**

***Summary 569***

***Recommended Reading 570***

**BOX 17.1 LEARNING AND MEMORY: SOME BASIC CONCEPTS  
AND DEFINITIONS 543**

**BOX 17.2 MASTERING LONDON TOPOGRAPHY CHANGES  
HIPPOCAMPAL STRUCTURE IN TAXI DRIVERS 566**

## ***Chapter 18 Learning and Memory: New Experimental Techniques Enable Rapid Progress in Research on Mechanisms of Memory***

New Experimental Techniques Enable Rapid Progress in Research on Mechanisms of Memory 572

The Nervous System May Form and Store Memories in Various Ways 573

Cerebral Changes Result from Training 576

Invertebrate Nervous Systems Show Plasticity 581

Could Long-Term Potentiation Be a Model for Studying Mechanisms of Learning and Memory? 582

The Mammalian Cerebellum Houses the Brain Circuit for a Simple Conditioned Reflex 590

## ***Chapter 19 Language and Cognition***

The Development and Evolution of Speech and Language Are Remarkable and Mysterious 608

Language Disorders Result from Region-Specific Brain Injuries 613

Electrical Stimulation Provides Information about the Organization of Language in the Brain 620

Functional Neuroimaging Portrays the Organization of the Brain for Speech and Language 621

Williams Syndrome Offers Clues about Language 623

The Left Brain Is Different from the Right Brain 623

The Frontal Lobes of Humans Are Related to Higher-Order Aspects of Cognitive and Emotional Functions 629

**Afterword 643**

**Appendix A-1**

**Glossary G-1**

**References R-1**

## ***Neural Mechanisms 571***

**Memories of Different Durations Form by Different  
Neurochemical Mechanisms 593**

**The Basic Neurochemical Cascade Extends from  
Stimulus to LTM 596**

**Memory Formation Can Be Modulated 598**

**Some Brain Measures Correlate with Age-Related  
Impairments of Memory 599**

***Summary 604***

***Recommended Reading 605***

**BOX 18.1 MODIFYING BRAINS FOR BETTER LEARNING  
AND MEMORY 600**

## ***607***

**Deficits in Spatial Perception Follow Some Types  
of Brain Injury 632**

**Following Some Injuries, the Brain Can Recover  
Function 634**

***Summary 641***

***Recommended Reading 642***

**BOX 19.1 THE WADA TEST 614**

**BOX 19.2 A SPORT THAT DESTROYS THE MIND 635**

**BOX 19.3 THE COMPARATIVELY MINOR EFFECTS OF  
CHILDHOOD LOSS OF ONE HEMISPHERE 638**

**Author Index AI-1**

**Subject Index SI-1**

**Illustration Credits IC-1**
