

# Contents

<b>Introduction</b>	1
1. This is a book...	1
2. How to use this book	2
3. About the English edition	3
4. Acknowledgements	3
<b>I. Affine Geometry</b>	7
1. Affine spaces	7
2. Affine mappings	14
3. Using affine mappings: three theorems in plane geometry	23
4. Appendix: a few words on barycenters	26
5. Appendix: the notion of convexity	28
6. Appendix: Cartesian coordinates in affine geometry	30
Exercises and problems	32
<b>II. Euclidean Geometry, Generalities</b>	43
1. Euclidean vector spaces, Euclidean affine spaces	43
2. The structure of isometries	46
3. The group of linear isometries	52
Exercises and problems	58
<b>III. Euclidean Geometry in the Plane</b>	65
1. Angles	65
2. Isometries and rigid motions in the plane	76
3. Plane similarities	79
4. Inversions and pencils of circles	83
Exercises and problems	98
<b>IV. Euclidean Geometry in Space</b>	113
1. Isometries and rigid motions in space	113
2. The vector product, with area computations	116
3. Spheres, spherical triangles	120
4. Polyhedra, Euler formula	122
5. Regular polyhedra	126
Exercises and problems	130
<b>V. Projective Geometry</b>	143
1. Projective spaces	143
2. Projective subspaces	145

3. Affine <i>vs</i> projective .....	147
4. Projective duality .....	153
5. Projective transformations .....	155
6. The cross-ratio .....	161
7. The complex projective line and the circular group .....	164
Exercises and problems .....	170
<b>VI. Conics and Quadrics</b> .....	183
1. Affine quadrics and conics, generalities .....	184
2. Classification and properties of affine conics .....	189
3. Projective quadrics and conics .....	200
4. The cross-ratio of four points on a conic and Pascal's theorem ..	208
5. Affine quadrics, <i>via</i> projective geometry .....	210
6. Euclidean conics, <i>via</i> projective geometry .....	215
7. Circles, inversions, pencils of circles .....	219
8. Appendix: a summary of quadratic forms .....	225
Exercises and problems .....	233
<b>VII. Curves, Envelopes, Evolutes</b> .....	247
1. The envelope of a family of lines in the plane .....	248
2. The curvature of a plane curve .....	254
3. Evolutes .....	256
4. Appendix: a few words on parametrized curves .....	258
Exercises and problems .....	261
<b>VIII. Surfaces in 3-dimensional Space</b> .....	269
1. Examples of surfaces in 3-dimensional space .....	269
2. Differential geometry of surfaces in space .....	271
3. Metric properties of surfaces in the Euclidean space .....	284
4. Appendix: a few formulas .....	294
Exercises and problems .....	296
<b>A few Hints and Solutions to Exercises</b> .....	301
Chapter I .....	301
Chapter II .....	304
Chapter III .....	306
Chapter IV .....	314
Chapter V .....	321
Chapter VI .....	326
Chapter VII .....	332
Chapter VIII .....	336
<b>Bibliography</b> .....	343
<b>Index</b> .....	347
