About the Editors xxiii

SECTION I

FUNCTION AND COMPOSITION OF THE IMMUNE SYSTEM 1

CHAPTER 1

Overview of Immunity 3

Karen E. Yates and Jeffrey B. Lyczak

Overview of Immunology 3

Definitions of Immunology and Immunity 3

The Immune System: Key Definitions and Concepts 4

Categories of Immune System Functions 7

Innate Immunity 7

Mechanisms of Innate Immunity 7

Cellular Effectors of Innate Immunity 9

Cooperation among Innate Immune Mechanisms 10

Mechanisms of Adaptive Immunity 11

Self/Nonself Discrimination 11

Cellular Effectors of Adaptive Immunity 11

Organs That Support the Acquired Immune Response 17

Cytokines: Regulators of Immune Function 17

Interactions between Acquired and Innate Immunity 18

The Primary Role of the Immune System: Protection against
Infection and Disease 18

Protection against Cancer 22
Pathology Related to the Immune Response 22
Summary 26
SUGGESTED READING 27

Chapter 2

Innate Immunity 29

Jeffrey B. Lyczak

Physical and Physiologic Barriers 30
Enzymatic and Protein Effectors 31
Enzymatic and Protein Effectors at Mucosal Surfaces 31
Enzymatic and Protein Effectors in the Blood: the Complement System 33
Cellular Effectors of Innate Immunity 34
Signal Transduction 36
Mechanisms of Recognition by Cells of the Innate Immune Response 36
Innate Responses to Viral Infection 41
Type I Interferons 41
Complement as an Antiviral Agent 42
Inflammation: Orchestrating the Innate Effectors 43
Localized Inflammatory Responses 43
Systemic Inflammatory Responses: the Acute-Phase Response 44
Cross-Talk between the Innate and Acquired Arms of Immunity 44
Summary 45
SUGGESTED READING 45

3

Cells of the Immune System 47*Elinor M. Levy***Hematopoiesis and Generation of Cells of the Immune System 47**

Stem Cells, Myeloid Cells, and Lymphoid Cells 47

Growth Factors and Genesis of Cells of the Immune System 48

Identification of Cells via Surface Markers 49

The Concept of the Use of Cell Surface Antigens To Generate Antibodies 49

Use of Monoclonal and Polyclonal Antibodies To Identify Cells via Expressed Markers 49

Morphology and Function of Myeloid Cells 49

Monocytes, Macrophages, and Other Antigen-Presenting Cells 49

Granulocytes: Neutrophils, Eosinophils, and Basophils 53

Platelets and Their Role in Immunity 56

Dendritic Cells 57

Morphology and Function of Lymphoid Cells 58

Lymphoid Cells 58

Major Populations and Subpopulations of Lymphocytes 60

T Lymphocytes 60

B Lymphocytes 61

Null or Third-Population Cells 62

Summary 64**SUGGESTED READING 64**

4

Organs and Tissues of the Immune System 67*Steven A. Bogen***Generative Lymphoid Organs 68**

Bone Marrow 68

Thymus 69

The Anatomy of Immune Responses 70

Lymphocyte Recirculation 72

Germinal Centers 74

Peripheral Lymphoid Organs 76

The Spleen 76

Lymph Nodes 77

MALT 78

The Mucosal Barrier 79

Anatomic Organization of Mucosal Lymphoid Tissues 80

Cutaneous Immunity 82

Summary 83

SUGGESTED READING 84

chapter 5

Complement 85

Francis Moore, Jr.

Complement Proteins 86

Activation of Complement 87

The Classical Pathway of Complement Activation 88

The Alternative Pathway of Complement Activation 92

The Lectin Pathway 94

Other Mechanisms of Complement Activation 95

Functions of Complement 97

Complement Receptors 97

Functions Associated with Surface-Bound Split Products 100

Functions Associated with Soluble Split Products 102

Regulation of Complement Activation 102

Intrinsic Biochemical Properties of Complement Proteins That Regulate Complement Activation 102

Attenuation of Complement Activation by Dedicated Regulatory Proteins 103

Evasion by Pathogenic Microorganisms of Complement-Mediated Killing 104

Synthesis of Complement Proteins 105

Disorders Associated with Defects in Synthesis of Complement Proteins 106

Summary 107

SUGGESTED READING 109

chapter II

ANTIBODIES 111

chapter 6

Antibodies 113

Ronald B. Corley

Chemical Structure of Antibodies 114

Early Studies 114

Monomer Unit Structure: Heavy and Light Chains 114

Variable and Constant Regions 117

Variable-Region Domains: Structure and Function 122

Constant-Region Domains: Structure and Function 127

The Hinge Region	130
The J Chain	131
Membrane Forms of Antibodies: the B-Cell Receptor	132
Glycosylation	132
Antigenic Determinants of Immunoglobulins	133
Classification of Antibodies	134
Antibody Classes and Their Functions	134
Nonmammalian Immunoglobulin Isotypes	140
The Immunoglobulin Superfamily	141
SUGGESTED READING	143

chapter 7

Molecular Genetics of Antibody Diversity 145

Guillermo E. Taccioli

Observations and Theories Predating Molecular Genetics of Immunoglobulin Genes 145

Organization of the Immunoglobulin Genes 148

Overview 148

The Immunoglobulin H-Chain (IGH) Locus 149

The κ L-Chain (IGK) Locus 151

The λ L-Chain (IGL) Locus 151

The Mechanism of Variable-Region Gene Assembly 151

Overview 151

Recombination Signal Sequences 153

DNA Rearrangements during V(D)J Recombination 155

Protein Factors Involved in V(D)J Recombination 157

Generation of Antibody Diversity 162

Combinatorial Rearrangement of V, D, and J Genes 162

H-Chain–L-Chain Pairing 164

Palindromic Nucleotide (P-Nucleotide) Addition 165

Junctional Flexibility 166

Nontemplated Nucleotide (N-Nucleotide) Addition 167

Somatic Hypermutation 167

Receptor Editing, a Means of Rescuing an Autoreactive B Cell from Negative Selection 169

Other Mechanisms of Immunoglobulin Diversity in Other Species 170

Productive and Nonproductive Rearrangements: Allelic Exclusion 170

B-Cell Differentiation 171

Antigen-Independent Development 171

Antigen-Dependent Development 171

Overview of Model Systems for Study of B-Cell Differentiation 173

Surrogate L-Chain Genes 173

Surface Marker Expression during Early B-Cell Stages 174

Regulation of Immunoglobulin Expression 175

Transcription at the Immunoglobulin Loci 175

Immunoglobulin H-Chain Isotype Expression during
B-Cell Differentiation 176**An AID in the Generation of Immunoglobulin
Diversity 179**

Summary 182

SUGGESTED READING 182

8**Antigens, Antigenicity, and
Immunogenicity 185***Gerald B. Pier***General Properties of Antigens 186****Activation of T Cells and B Cells by Antigen 187**

Nature of B- and T-Cell Epitopes 187

T-Cell Epitopes and Peptide Binding to MHC Molecules 187

Host Factors Affecting the Selection of Antigenic Peptides 190

Recognition of the MHC-Complexed T-Cell Epitope 191

B-Cell Epitopes 192

Anti-Idiotypic Antibodies 193

Immunodominance of Epitopes 193

Antigenicity and Immunogenicity 194

Factors Affecting Immunogenicity 194

Adjuvants 197**Important Antigens from Infectious Agents 198**

Viral Antigens 199

Bacterial Antigens 199

Fungal Antigens 200

Parasitic Antigens 202

Superantigens 202**Mitogens 204**

Summary 204

SUGGESTED READING 205

9**Antibody-Antigen Interactions
and Measurements of
Immunologic Reactions 207***Johannes Huebner***The Concept of Specificity 207**

The Molecular Basis of Specificity 208

Crystallographic Evidence of Specificity 209

Deviations from Absolute Specificity 210

Cross-Reactivity 210

Polyfunctional Binding Sites 212

The Physical Nature of the Antibody-Antigen Interaction 213

The Concept of Antibody Affinity 213

The Law of Mass Action and Its Application to Antigen-Antibody Binding 213

The Concept of Antibody Avidity 215

Forces between Antigens and Antibodies 215

Types of Assays To Measure Antigen-Antibody Interactions 217

Precipitin Reactions 217

Fluid-Phase Immunoprecipitation or "Ring Test" 219

Gel-Based Immunoprecipitation 219

Agglutination 220

Enzyme-Linked Immunoassays 224

Radioimmunoassay 226

Use of Antibodies To Differentiate Tissues and Cells 226

Fluorescence Cell Sorting 226

Microscopic Detection of Cells and Antigens: Light Microscopy and Electron Microscopy 228

Measurements of Immunity to Infection 228

Neutralization Assays 228

Opsonophagocytic Assay for Extracellular Pathogens 229

Measurements of Cell-Mediated Immunity 230

Lymphocyte Proliferation and Response of T Cells to Antigenic Stimulus 231

Cytotoxic Responses 232

Summary 232**SUGGESTED READING 232****10****B-Lymphocyte Activation and Antibody Production 233***Lee M. Wetzler and Hilde-Kari Guttormsen***Interaction of Antigen and B Lymphocyte: the BCR 234**

BCR Structure and Expression 234

Signal-Transduction Events after Engagement of the BCR 236

Regulation of BCR Signal Transduction 239

CD19/CD21/CD81: the B-Cell Coreceptor 239

CD22 240

CD45 240

CD20 241

CD5: a Questionable Role for Expression and Function on B Cells? 242

Role of Fc Receptors in B-Cell Activity 242

Germinal Centers and B-Cell Maturation 245

The Initial Encounter of B Cell with Antigen 245

The Secondary Phase of the B-Cell Response 246

Interaction of B Cells with FDCs 246

Antibody Production by B Lymphocytes 247

TI Antibody Response 247

Structure of TI Antigens 247

TI-1 Antigens 248

TI-2 Antigens 248

Kinetics and Characteristics of the Antibody Response to TI Antigens 249

TD Antibody Response 249

Structure of TD Antigens 249

Kinetics of TD Antibody Response 250

T-Cell Dependence and Conjugate Vaccines 250

B-Lymphocyte Interaction with T Lymphocytes 251

Contact Interaction between B and T Lymphocytes 251

Effect of Cytokines on B-Cell Activation and Antibody Production 254

Isotype Switching 256

Apoptosis: the Flip Side of B-Cell Activation 257

Summary 258

SUGGESTED READING 258

SECTION III

CELLULAR IMMUNITY 259

CHAPTER 11

The Major Histocompatibility Complex 261

Jeffrey B. Lyszak

Discovery of the MHC Gene Complex 261

General Arrangement of the MHC Gene Complex 262

Basic Nomenclature of MHC Genes and Proteins 262

Each Class of MHC Proteins Is Made Up of Functionally Related but Distinct Proteins 262

Polymorphism of Genes for Antigen-Presenting MHC Proteins 263

Use of Inbred Mouse Strains in Experimental Immunology 264

MHC-Congenic Mouse Strains and Their Use in the Study of MHC Function 265

Recombinant Congenic Mouse Strains 268

MHC-Transgenic Mouse Strains 269

MHC Genes and Linkage Disequilibrium 270

Structure of MHC Class I and Class II Proteins 270

Subunit Composition of MHC Class I and Class II Proteins 270

Peptide Binding by MHC Class I and Class II Proteins 271

Differences between Peptides Bound by MHC Class I Proteins and Those Bound by Class II Proteins 273

Variation in Classical MHC Class I and Class II Proteins and Effect on Peptide Binding 274

MHC Class I and Class II Polymorphism Allows Binding of Diverse Antigenic Peptides 275

Some MHC Class I and Class II Genes Exist in Multiple Copies per Haploid Genome 276

Serologic and Sequence-Based Identification of MHC Proteins and Relationship to MHC Polymorphism 276

Serologic Identification of MHC Class I Antigens 276

Serologic Identification of MHC Class II Antigens 278

DNA-Based HLA Typing 279

MHC Proteins with Ancillary Roles in Antigen Presentation 279

MHC Class III: MHC Proteins with No Role in Antigen Presentation 280

Roles of Some Nonclassical MHC Gene Products in Activation of T Cells in Response to Novel Stimuli 280

MHC-Like Antigen-Presenting Molecules Encoded by Genes Located outside the MHC and Roles in Presentation of Unusual Antigens 281

Summary 282

SUGGESTED READING 282

12

Antigen Processing and Presentation 283

Lee M. Wetzler

APCs 284

Antigen-Processing Pathways 284

Antigen Presentation by MHC Class I 286

Proteasomes and Immunoproteasomes: Antigen Processing for MHC Class I Presentation 286

Peptide Trafficking to MHC Class I and the Transporter Associated with Antigen Processing 288

Assembly of MHC Class I-Peptide Complex 289

Viral Evasion of MHC Class I Antigen Presentation 290

Antigen Presentation by MHC Class II 291

Antigen Uptake and Entrance into the Lysosomal/Endosomal Pathway 291

Synthesis of MHC Class II and Trafficking to the Lysosomal/Endosomal Pathway 291

Bacterial Evasion of MHC Class II Immunity 293

Presentation of Nonclassical, Nonprotein Antigens to T Cells 293

Summary 294

SUGGESTED READING 294

Chapter 13

The T-Cell Receptor 297

Howard Ceri and Chris Mody

Isolation and Characterization of the TCR 297

Functional Assays: the Demonstration of T-Cell Specificity and Self MHC Restriction 297

Monoclonal Antibodies and TCR Identification 299

Cloning and Sequencing of the TCR Gene 299

Structure of the TCR 299

Structure of the $\alpha\beta$ Receptor 299

Structure of the $\gamma\delta$ Receptor 301

Organization of TCR Genes 302

Organization of the Germ Line 302

Rearrangement of TCR Genes and Analogies to Immunoglobulin Genes 303

Generation of Diversity in the TCR 303

Genetic Basis for the Generation of TCR Variable Regions 303

Generation of TCR Diversity and Interaction with Peptide-MHC 307

Production of a Functional Receptor 308

Interaction with CD3 309

Role of CD4 and CD8 Polypeptides in TCR Function 310

Role of Other Accessory Molecules in TCR-Based Antigen Recognition 312

Summary 313

SUGGESTED READING 313

14

T-Cell Maturation and Activation 315

Gerald B. Pier, Howard Ceri, Chris Mody, and Michael Preston

T-Cell Maturation and Development in the Thymus 316

Early T-Cell Development 316

Cellular Markers and T-Cell Development 316

Lineage Commitment 320

Acquisition of MHC Restriction and Generation of the Mature T-Cell Repertoire 321

Positive Selection 322

Tolerance 325

Negative Selection 325

Central Tolerance Does Not Eliminate All Autoreactive Lymphocytes 329

Peripheral Tolerance 329

T-Cell Activation and Antigen Recognition 334

Events in T-Cell Signal Transduction 334

Alternate Mechanisms of T-Cell Activation 341

Summary 342

SUGGESTED READING 342

15

Cellular Communication 343

Arthur O. Tzianabos and Lee M. Wetzler

Interaction of Cells of the Immune System 343

Mechanisms of Communication 344

Structure and Function of Mediators of Cell-to-Cell Contact 345

Soluble Mediators of Communication: Cytokines and Chemokines 347

Biologic Properties of Cytokines 347

Identification of Cytokines 349

Chemokines 351

Chemokine Receptors 351

Cytokine Receptors and Receptor Signaling 351

Cytokine Families 358

Proinflammatory and Inflammatory Cytokines 358

Cytokines and Differentiation of T-Cell Function 361

Cytokines That Control Cell-Mediated Immunity: TH1-Type Cytokines 363

Cytokines That Control B-Cell Function: TH2-Type Cytokines 364

Cytokines That Control Cellular and Tissue Development 366

Chemokines and IL-8 367

Role of Cytokines in Other Diseases 368

Summary 368

SUGGESTED READING 369

SECTION IV

IMMUNOLOGIC EFFECTOR SYSTEMS AND IMMUNITY TO INFECTION 371

Chapter 16

Cell-Mediated Immunity 373

William R. Green

Fundamental Aspects of Cell-Mediated Immunity 373

History 374

Overlap of Cell-Mediated and Humoral Immunity 375

Specific versus Nonspecific Cell-Mediated Immunity 375

Initiating Cell-Mediated Immunity 378

DTH Reactions 379

Characteristics of the DTH Reaction 379

Cell-Mediated Cytotoxicity 390

CTLs 390

Biologic Significance 390

Induction of CTL Responses 390

CTL Effector Phase: Lytic Mechanisms 392

ADCC 396

Heterogeneity of Effector Cells Mediating ADCC 396

Nature and Specific Roles of Fc Receptors 396

Mechanisms of Target Cell Lysis in ADCC 397

Summary 398

SUGGESTED READING 398

Chapter 17

Mucosal Immunity 399

Scott Simpson and Lee M. Wetzler

GALT 400

Innate Immunity of GALT 400

Acquired Immunity of GALT 405

Factors Regulating the Mucosal Immune Response: Oral Tolerance 417

Airway Immunity: BALT 418

Innate Immunity in the Respiratory Tract: the Alveolar Epithelium 418

Acquired Immunity in the Respiratory Tract: Inductive Sites 419

Humoral Immunity: B Cells and Immunoglobulin 419

Cellular Immunity 420

Urogenital Tract Immunity 421

Innate Immunity of the UGT 421

Acquired Immunity of the UGT 422

Damage to Mucosal Sites by the Immune Response 423

Summary 423

SUGGESTED READING 423

Chapter 18

Immunity to Bacterial Infections 425

Gerald B. Pier

Bacteria and Disease 425

Bacterial Diseases: Many Infectious Agents and Many Diseases 426

Innate Immunity and Bacterial Infection 429

Immune System Function and Resistance to Bacterial Infections 432

Role of Complement and Antibody 433

Cell-Mediated Immunity and Bacterial Infection 434

Cytokines and Chemokines in Cell-Mediated Immunity to Bacteria 435

Host Response to Bacterial Infection 435

Immunity at Mucosal Surfaces 435

The Study of How Bacteria Cause Disease: Bacterial Pathogenesis 436

Cell Wall Structure of Gram-Positive and Gram-Negative Bacteria 436

Initial Stage of Bacterial Infection: Colonization of Host Surfaces 441

Tissue Invasion and Disease 442

Disease 443

Toxins 443

Endotoxin 445

Bacterial Invasion 445

Bacterial Virulence Factors: How They Thwart Host Immunity 445

Surface Polysaccharides and Proteins and Bacterial Survival 446

Biofilms, Quorum Sensing, and Bacterial Pathogenesis 446

Mechanisms of Secretion of Microbial Virulence Factors 447

Bioterrorism and Bacterial Pathogens 448

Anthrax 448

Plague 449

Tularemia 450

Botulism 450

Antigenic Targets Involved in Protective Immunity 450

Antigenic Targets of Immunity for Extracellular Pathogens 450

Antigenic Targets of Immunity for Intracellular Bacterial Pathogens 451

Protection against Bacterial Exotoxins 451

Summary 451

SUGGESTED READING 452

19**Immunity to Viruses 453***Edward Barker***Viruses and Disease 453**

Tissue Tropism and Viral Infections 454

The Course of Viral Infections and Development of Disease 454

Emergence of New Viral Diseases 455

Innate Immunity and Viral Infections 455

Viruses and Acquired Immunity 457

Antibody-Mediated Antiviral Responses 458

Cellular Antiviral Immune Responses 459

Structural Properties of the Virus 460

The Capsid 460

The Envelope 460

Viral Nucleic Acid 461

Replication of the Virus 462

Host-Cell Response to Viral Infections 464

Evasion of Host Antiviral Immune Defenses 465

Dormancy and the Proviral State 465

Inhibition of Antiviral Humoral Immunity 466

Evasion of Cellular Antiviral Immune Responses 466

Summary 467

SUGGESTED READING 467

20**Immunity to Parasitic and Fungal Infections 469***Judith E. Allen and Leo X. Liu***Protozoal Infections 471**

Malaria: a Serious Blood-Borne Protozoal Infection 471

Leishmaniasis: a Cutaneous and Visceral Intracellular Protozoal Infection 472

Trypanosomes: Tissue and Blood Protozoan Parasites 473

Toxoplasmosis: an Important Zoonosis 474

Helminthic Infections 474

Schistosomiasis: a Blood Fluke Infection Transmitted by Freshwater Snails 474

Filariasis and Onchocerciasis: Intravascular and Tissue Nematode Infections 475

Intestinal Nematodes Infect One-Fourth of the World's People 477

Immune Responses in Parasitic Infections 478

T Cells and Cytokines Regulate Immune Responses in Parasitic Infections 478

TH-Cell Subsets Control Disease Outcome in Leishmaniasis 482

TH2 Responses Control Infection with Intestinal Nematodes 482

The Interplay between TH1 and TH2 Responses during Parasitic Infection 483

Immune Effectors in Parasitic Infections 486

Macrophages and Nitric Oxide Are Critical for Parasite Killing 486

Cytotoxic CD8⁺ T Cells Help Control Intracytoplasmic Protozoan Parasites 487

Antibodies and Immunoglobulin Isotypes in Parasitic Infections 488

Mast Cells and Goblet Cells in Intestinal Nematode Infection 488
Eosinophils 489

Immune Evasion by Parasites 489

Intracellular Parasitism: Seclusion from the Immune System 490

Parasites Produce Antioxidant Enzymes 490

Parasites Survive by Interfering with the Complement Cascade 490

Antigenic Variation 491

Parasites Can Exploit Host Cytokines 492

Immunology of Fungal Infections 492

General Features of Fungal Infections 492

Immunity to Fungal Infections 493

Summary 495

SUGGESTED READING 496

21

Vaccines and Vaccination 497

Gerald B. Pier

Early and Defining Issues in Vaccine Development 498

Basic Concepts in Vaccination 498

Types of Protection 498

Defining Antigenic Targets of Immunity 499

Requirements for a Safe Vaccine 500

Immune Recognition of Pathogens 502

Basic Considerations 502

Parasite Evasion or Neutralization of Host Immune Effectors 504

Vaccine Components and Vaccination Strategies 505

Antigenic Targets and Delivery Vehicles 505

Anti-Idiotypic Vaccines 505

Peptide-Based Vaccines 505

DNA Vaccines 507

Adjuvants 507

Antigen Production in Infected or Transfected Mammalian Cells 510

Live, Recombinant Vector Vaccines 510

Reverse Vaccinology 511

Route of Vaccination 511

Bacterial Vaccines 513

Types of Bacterial Vaccines 514

Successful Bacterial Vaccines 516

Difficulties with Bacterial Vaccines 517

Viral Vaccines 518

Types of Viral Vaccines 520

Successful Viral Vaccines 521

Difficulties with Viral Vaccines 521

Safety of Viral Vaccines 522

Vaccines for Fungal Infections 522

Fungal Diseases Targeted by Current Vaccine Research 522

General Strategies for Future Development of Vaccines for Fungal Infections 524

Vaccines for Parasitic Diseases 524

Protozoan Diseases Targeted by Current Vaccine Research 525

Vaccines for Other Parasites 527

Passive Immunization 527

Summary 528

SUGGESTED READING 528

V IMMUNE SYSTEM DYSFUNCTION: DEFICIENCIES 529

22

Immunology and AIDS 531

Saskia Boisot and Gerald B. Pier

Etiology and Epidemiology of AIDS 531

HIV 532

Viral Tropism 536

Animal Models of HIV Infection 537

The Viral Genome 537

Viral Structural Genes 537

Pathogenesis 540

Acute Infection 540

Chronic Asymptomatic Infection 541

Late Infection 542

Immune Defects Due to HIV-1 Infection 542

CD4⁺ T Lymphocytes 542

Antigen-Presenting Cells 543

B Lymphocytes 543

CD8⁺ T Lymphocytes 543

Other Cell Types 543

Immune Responses to HIV-1 Infection 544

Role of CD4⁺ T Cells 544

HIV-1-Specific CTLs 544

Antiviral Cytokines 545

Antiviral Antibodies 545

Evasion of Immune Responses by HIV-1 545

Escape from Antiviral Cytokines 545

Escape from Neutralizing Antibodies 546

Escape from CTLs 546

Pharmacologic Therapy for HIV-1 Infection 547

Nucleoside RT Inhibitors 547

Nonnucleoside RT Inhibitors 548

Protease Inhibitors 548

Future Antiviral Drugs 548

Viral Fitness, Viral Resistance, and Viral Evolution 548

Potential Vaccines and Immunotherapies for HIV-1 Infection 548

Vaccination 549

Immune Reconstitution and Immunotherapies 549

Summary 550

SUGGESTED READING 550

23

Clinical and Genetic Perspectives in Primary Immunodeficiency Disorders 553

Jeff M. Milunsky and Stephen I. Pelton

Basic Defects Leading to Immune Dysfunction 554

Defects in Lymphocyte Development and Function 555

Bare Lymphocyte Syndrome 557

Defects in Phagocytic Killing 557

Leukocyte Adhesion Deficiency 558

Reticular Dysgenesis 561

Clinical Manifestations of Immunodeficiency 561

Clinical Aspects of SCID Syndrome 561

Invasive Bacterial Disease: Bacteremia and Sepsis 563

Increased Susceptibility to Invasive and Recurring Neisserial Disease 565

Respiratory Tract Infection 566

Respiratory Infection with Opportunistic Pathogens 566

Recurrent or Prolonged Respiratory Tract Infection 566

Complicated Pneumonia: Lung Abscess and Empyema 567

Skin Manifestations of Immune Deficiency 568

LAD 568

Chediak-Higashi Syndrome 569

Other Disorders of Leukocyte Mobility 569

Mucocutaneous Candidiasis 569

Oral Manifestations of Immune Deficiency 569

Viral Illnesses or Vaccine Complications of Unusual Severity 570

Summary 570

SUGGESTED READING 570

24

Cancer and the Immune System 573

Lisa H. Butterfield, Stephen P.

Schoenberger, and Jeffrey B. Lyczak

Cancer Is a Disease of Genes 575

Genetic Changes in Transformed Cells 576

The Immune Response to Cancer 579

Mechanisms of Antitumor Immunity 579

Classes of Tumor Antigens 579

Methods for the Identification of Tumor Antigens 581

Immune Cell Types Important in Antitumor Immunity 583

CTLs 583

Natural Killer Cells 583

Macrophages 584

Tumor Surveillance Theory 584

Tumor Immunotherapy 585

TILs and LAKs 585

Cytokine Therapy 586

Nonspecific Immune Stimulation and Adjuvants 586

Antitumor Vaccines 587

Genetic Modification of Tumor Cells To Improve Antitumor Immune Responses 588

MAbs 588

Heteroconjugate MAbs 589

Immunotoxins 590

Summary 590

SUGGESTED READING 591

VI

IMMUNE SYSTEM DYSFUNCTION: OVERACTIVITY 593

Chapter 25

Hypersensitivity 595

J. Patrick Whelan and Carolyn L. Cannon

Historical Understanding of the Concept of Hypersensitivity 596

Molecular and Cellular Factors in Hypersensitivity Reactions 596

Three Types of Hypersensitivity 596

Mechanisms of Allergy 597

Subtypes of Allergic Responsiveness 599

Type I Immediate Hypersensitivity 599

Type II Cytotoxicity Reactions 612

Type III "Immune Complex" Hypersensitivity Reactions 616

DTH 619

Summary 623

SUGGESTED READING 623

Chapter 26

Autoimmunity and Disease 625

Harley Y. Tse and Michael K. Shaw

Autoimmunity and Autoimmune Diseases 625

Targets of Autoimmune Diseases 625

Genetic Considerations 626

Environmental Factors and Autoimmune Diseases 627

Cause-and-Effect Relationship of Autoimmunity and
Autoimmune Diseases 627

Pathogenesis of Autoimmune Diseases 627

Systemic Immune Complex-Mediated Autoimmunity 628

Organ-Specific Autoimmune Diseases 631

Animal Models of Autoimmune Diseases 636

Spontaneously Arising Autoimmune Diseases in Animals 636

Experimentally Induced Animal Models 638

Etiology of Autoimmunity 641

Sequestered Antigens Not Exposed to Selection during Tolerance Induction 641

Pathogens as Triggers of Autoimmunity 641

Therapy for Autoimmune Diseases 642

Standard Therapies 643

Experimental Approaches 645

Summary 648

SUGGESTED READING 648

27

Transplantation Immunology 649

Anil Chandraker and Mohamed H. Sayegh

The Role of Major Histocompatibility Antigens versus Minor Histocompatibility Antigens in Transplantation 651

Major Histocompatibility Antigens 651

Minor Histocompatibility Antigens 653

Tissue Typing 653

Initiation of a Graft Rejection Response 654

Mechanisms of Allorecognition 655

The Roles of Direct and Indirect Allorecognition in Graft Rejection 656

T-Cell Activation 657

Effector Mechanisms of Allograft Rejection 658

Chemokines 659

Graft-versus-Host Disease 660

Tolerance 661

Immunosuppression 662

Classes of Immunosuppressive Drugs 663

Corticosteroids 663

Azathioprine 664

Mycophenolate Mofetil 664

Calcineurin Inhibitors 664

Polyclonal Antibodies 665

Monoclonal Antibodies 665

Interleukin-2 Receptor Antagonists 665

Summary 666

SUGGESTED READING 666

APPENDIX A CD Antigens 667

APPENDIX B Antigen Names with CD Designation Equivalents 675

**APPENDIX C Cytokines, Chemokines, and
Their Receptors 681**

**APPENDIX D Cell Types and Immune-Related
Functions 689**

**APPENDIX E Historical Timeline of
Immunology 691**

**APPENDIX F Time Course of a Typical
Immune Response 693**

**APPENDIX G Comparison of Relative Sizes of
Cells, Structures, and Molecules That Are
Relevant to Infection and Immunity 695**
