<b>Preface</b> . . . . .	ix
<b>Abbreviations</b> . . . . .	xi
<b>List of figures</b> . . . . .	xv
<b>List of tables</b> . . . . .	xvii
<b>About the authors</b> . . . . .	xxi
<b>1 Global climate and carbon cycle</b> . . . . .	1
1.1 Interactivity of global climate change and carbon cycle dynamics . . . . .	1
1.1.1 Global warming: facts and illusions . . . . .	1
1.1.2 Carbon cycle . . . . .	6
1.1.3 Carbon cycle and climate . . . . .	18
1.1.4 Conclusion . . . . .	22
1.2 Present-day trends of civilization development . . . . .	23
1.2.1 Introduction . . . . .	23
1.2.2 Contemporary global ecodynamics . . . . .	26
1.2.3 Sustainable development . . . . .	36
1.3 The global climate change and the Kyoto Protocol . . . . .	38
1.3.1 Atmospheric temperature . . . . .	40
1.3.2 Snow and ice cover . . . . .	40
1.3.3 Surface level and heat content of the upper layer of the ocean . . . . .	41
1.3.4 Other climatic parameters . . . . .	41
1.3.5 Concentration of GHGs and anthropogenic aerosols in the atmosphere . . . . .	42

1.4	The atmospheric greenhouse effect and global carbon cycle . . . .	46
1.5	Modelling the anthropogenic processes . . . . .	50
1.5.1	Anthropogenic factors in the global environmental dynamics. . . . .	50
1.5.2	Modelling the demographic processes . . . . .	60
1.5.3	Parameterization of anthropogenic processes. . . . .	65
1.5.4	Modelling natural and anthropogenic processes in a megalopolis . . . . .	70
1.6	Scenarios of the environmental dynamics . . . . .	74
1.6.1	Fishery scenario . . . . .	75
1.6.2	Scenario of the distribution of the soil-plant formation areas . . . . .	75
1.6.3	Investment scenario . . . . .	76
1.7	The major sudden stratospheric warming and the ozone hole split over Antarctica in 2002 . . . . .	79
1.7.1	The unprecedented event . . . . .	79
1.7.2	The role of the tropospheric dynamics . . . . .	80
1.7.3	The role of the planetary waves. . . . .	81
1.7.4	The role of the polar stratospheric vortex . . . . .	82
1.7.5	What do the models show? . . . . .	84
1.7.6	Conclusions . . . . .	84
<b>2</b>	<b>The biogeochemical carbon cycle in nature . . . . .</b>	<b>87</b>
2.1	Sources of and sinks for carbon dioxide in the biosphere . . . . .	87
2.2	Anthropogenic sources of carbon . . . . .	93
2.3	Conceptual diagrams of the global carbon cycle . . . . .	97
2.4	Resources of the biosphere and carbon cycle . . . . .	104
<b>3</b>	<b>Surface ecosystems and carbon cycle . . . . .</b>	<b>107</b>
3.1	Land ecosystems and their global dynamics . . . . .	107
3.1.1	Characteristics of the anthropogenic impacts on ecosystems. . . . .	108
3.1.2	The present state of individual ecosystems and the trends of their variability. . . . .	109
3.2	The role of forest ecosystems. . . . .	121
3.2.1	The greenhouse effect and forest ecosystems. . . . .	122
3.2.2	Global cycles of GHGs . . . . .	125
3.2.3	Afforestation and deforestation . . . . .	128
3.2.4	Conclusion . . . . .	128
3.3	The impact of carbon dioxide on primary production. . . . .	129
3.4	Carbon exchange processes on the "land-atmosphere" border . .	132
3.5	Some aspects of biocoenology in connection with the atmospheric greenhouse effect. . . . .	138
3.6	The system approach in biocoenology . . . . .	141
3.7	Models in biocoenology . . . . .	143

3.8	Modelling the forest ecosystems . . . . .	146
3.8.1	Modelling the growth of a tree as an element of the forest biocoenoses . . . . .	146
3.8.2	Modelling the water regime of plants . . . . .	148
3.9	Modelling the energy fluxes in the atmosphere–plant–soil system . . . . .	150
3.9.1	The model of photosynthesis of leaf canopy . . . . .	153
3.9.2	A dynamic photosynthesis–conductivity model . . . . .	157
3.10	Modelling the production processes in the coniferous forest . . . . .	158
3.10.1	Photosynthesis . . . . .	159
3.10.2	Distribution of enzymes . . . . .	160
3.10.3	Respiration and dying-off . . . . .	161
3.10.4	Water cycle . . . . .	161
3.11	Modelling the succession processes in the tundra–taiga system . . . . .	162
3.12	Global carbon dioxide model taking into account the spatial distribution of land biomass . . . . .	165
<b>4</b>	<b>Carbon cycle in the ocean . . . . .</b>	<b>167</b>
4.1	The World Ocean as a complex hierarchic system . . . . .	167
4.2	Atmosphere – ocean exchange processes . . . . .	170
4.3	The zonal model of the carbon cycle in the atmosphere–ocean system . . . . .	178
4.4	The 3-D model of the carbon cycle in the World Ocean . . . . .	180
4.5	Modelling the organic carbon cycle in the World Ocean . . . . .	183
4.5.1	General principles of deriving the models of the ocean ecosystems . . . . .	183
4.5.2	Equations of the World Ocean ecosystems dynamics . . . . .	186
4.5.3	Analysis of the vertical structure of the ocean ecosystem . . . . .	190
4.5.4	The organic carbon cycle in the ecosystem of the Peruvian current . . . . .	194
4.5.5	The organic carbon cycle in the ecosystem of upwelling . . . . .	198
4.5.6	The organic carbon cycle in conditions of freezing seas . . . . .	203
4.5.7	The organic carbon cycle in the Okhotsk Sea . . . . .	209
<b>5</b>	<b>Modelling the interactive cycles of carbon and other chemicals . . . . .</b>	<b>213</b>
5.1	Introduction . . . . .	213
5.2	General characteristics of global biogeochemical cycles . . . . .	214
5.3	Model of the global sulphur cycle . . . . .	216
5.4	Model of the global phosphorus cycle . . . . .	224
5.5	Model of the global nitrogen cycle (MGNC) . . . . .	227
5.5.1	Conceptual schemes of the nitrogen cycle in nature . . . . .	228
5.5.2	The block-scheme of the global nitrogen cycle in the biosphere . . . . .	228
5.5.3	Atmospheric components of the nitrogen cycle . . . . .	231
5.5.4	The surface part of the nitrogen cycle in the biosphere . . . . .	232
5.5.5	The hydrospheric constituent of the global nitrogen cycle . . . . .	235
5.5.6	Anthropogenic factors of nitrogen oxide in the biosphere . . . . .	236

5.6	Biospheric budget of oxygen and ozone . . . . .	239
5.6.1	Oxygen sources. . . . .	241
5.6.2	Processes of oxygen assimilation . . . . .	242
5.6.3	Ozone. . . . .	242
5.6.4	Anthropogenic impact on the oxygen cycle . . . . .	243
5.6.5	The model block-scheme of the oxygen budget in the biosphere. . . . .	247
5.7	An assessment of the role of aviation in the ozone layer dynamics . . . . .	249
5.8	The role of precipitation in the global cycle of carbon dioxide . . . . .	256
5.8.1	Modelling the global water cycle . . . . .	258
5.8.2	Modelling the water cycle on the atmosphere–land border . . . . .	261
5.8.3	Modelling the water cycle on the atmosphere–water surface border . . . . .	265
5.8.4	Simulation of water fluxes in the atmosphere . . . . .	266
5.8.5	Simulation of water fluxes in the World Ocean. . . . .	267
5.8.6	The model of the hydrological regime of a territory. . . . .	270
5.9	Methane and the carbon cycle . . . . .	275
<b>6</b>	<b>Modelling the global carbon cycle . . . . .</b>	<b>285</b>
6.1	Introduction . . . . .	285
6.2	The global model of the nature–society system dynamics. . . . .	287
6.3	The role of land biota in CO <sub>2</sub> assimilation from the atmosphere . . . . .	294
6.4	The role of the World Ocean in the assimilation of carbon dioxide from the atmosphere . . . . .	298
6.5	Future development of the global carbon cycle model. . . . .	300
6.5.1	The international programme on studies of the carbon cycle in the environment. . . . .	301
6.5.2	Structure of the global model of the nature–society system . . . . .	306
6.5.3	Evolution and survivability of the nature–society system. . . . .	309
6.5.4	Modelling the climatic processes . . . . .	311
6.5.5	Some estimates of global eco-dynamics . . . . .	317
