

CONTENTS

Preface	xvii
---------------	------

1. Cell-Cell Channels and Their Implications for Cell Theory	1
<i>Frantisek Baluska, Dieter Volkmann and Peter W. Barlow</i>	
The Permanent Crisis Surrounding Cell Theory	2
More Problems with Cell Theory: What Is a Cell?	3
Julius Sachs: Energide as the Basic Unit of Eukaryotic Life	
Endowed with Vital Energy	4
Energide versus Cell Periphery	5
Adaptability versus Complexity in Cellular Evolution	6
Duality of Eukaryotic Cells	7
Cell-Cell Channels: Supracellularity Is Found at All Levels	
of Cellular Organization	7
Cell-Cell Channels in Filamentous Fungi, Plants and Animals	9
Cell-Cell Channels and the Energide: Implications for Cell Theory	10

Section I: Prokaryotic Cells

2. Mating Cell-Cell Channels in Conjugating Bacteria	21
<i>Elisabeth Grohmann</i>	
Conjugative DNA Transfer in Gram-Negative Bacteria	22
Pheromone-Responsive Conjugative Plasmids in <i>E. faecalis</i>	27
Nonpheromone-Responsive Plasmids in G+ Bacteria	28

Section II: Ciliate Cells

3. The <i>Tetrahymena</i> Conjugation Junction	39
<i>Eric S. Cole</i>	
Developmental Biology	41
Biochemical Studies	55
Genetic Studies	57

Section III: Algal Cells

4. Cytoplasmic Bridges in <i>Volvox</i> and Its Relatives	65
<i>Harold J. Hoops, Ichiro Nishii and David L. Kirk</i>	
A Brief Overview of <i>Volvox carteri</i> Development	66
The Formation of a Cytoplasmic-Bridge System	
in <i>Volvox carteri</i> Embryos	68
Structural Features of the <i>V. carteri</i> Cytoplasmic-Bridge System	70
The Function of the Cytoplasmic-Bridge System	
in Cleaving Embryos	71
The Function of the Cytoplasmic-Bridge System	
in Inverting Embryos	71
An Inversion Motor in the Cytoplasmic Bridges	72

The Evolutionary Origins of Cytoplasmic Bridges that Persist in the Adult	74
Structure and Formation of Persistent Cytoplasmic Bridges in <i>Volvox</i> , Section Euvolvox	76
What Is the Relationship between Embryonic and Adult Cytoplasmic Bridges?	81
The Functions of Persistent Cytoplasmic Bridges	81

Section IV: Fungal Cells

5. Vegetative Hyphal Fusion in Filamentous Fungi	87
<i>Nick D. Read and M. Gabriela Roca</i>	
Fusion between Spores and Spore Germlings	88
Fusion between Hyphae in the Mature Colony	91
CAT Fusion as a Model for Studying Vegetative Hyphal Fusion	91
Functions of Vegetative Hyphal Fusion	94
Features of Hyphal Fusion in Common with Yeast Cell Mating and Appressorium Formation	94
Vegetative Hyphal Fusion and Heterokaryon Incompatibility	95

Section V: Plant Cells

6. Plasmodesmata: Cell-Cell Channels in Plants	101
<i>Yoselin Benitez Alfonso, Laurence Cantrill and David Jackson</i>	
Structure of Plasmodesmata	102
Mechanisms of Protein and RNA Transport through PDs	104
Plasmodesmata as a Route for Trafficking of Developmental Signals	106
Developmental and Environmental Regulation of PD SEL	106
7. Sieve-Pore Plugging Mechanisms	113
<i>Aart J.E. van Bel</i>	
Cell Biology of the Sieve Element/Companion Cell Complex	113
Mass Flow and Phloem-Specific Proteins	114
Sieve-Plate Plugging by Phloem-Specific Proteins	114
Mechanisms of Sieve-Plate Sealing	115
Dispersion and Contraction of Forisomes	115
Physiological Triggers of the Sieve-Plate Plugging	115
8. Actin and Myosin VIII in Plant Cell-Cell Channels	119
<i>Jozef Samaj, Nigel Chaffey, Uday Tirlapur, Jan Jasik, Andrej Hlavacka, Zhan Feng Cui, Dieter Volkmann, Diedrik Menzel and Frantisek Baluska</i>	
How Are Proteins and Other Molecules Targeted to PD?	120
How Are Molecules Transported through PD?	120

Actin and Myosin VIII in PD of Algae and Herbaceous Plants	121
Root Cap Statocytes Are Symplasmically Isolated and Depleted in Myosin VIII	122
PD and Nuclear Pores: Common Structural and Functional Aspects	124
PD and Cell Plates: Endocytic Connections?	125
Cytoskeleton, Endocytosis and PD	127
Actin and Myosin VIII in PD of Woody Tissues in Trees	128
Conclusions and Outlook: From the Actomyosin-Based PD in Plants to the Actomyosin-Based Cell-Cell Channels in Animals	130
9. Cell-Cell Communication in Wood	135
<i>John R. Barnett</i>	
Xylem Parenchyma	137
Origin and Function of Rays	141
Distribution of Plasmodesmata in Nonparenchymatous Wood Cells	142
Plasmodesmata in Differentiating Xylem	144
Formation of Plasmodesmata in Cambium and Developing Wood Cells	145
10. TMV Movement Protein Targets Cell-Cell Channels in Plants and Prokaryotes: Possible Roles of Tubulin- and FtsZ-Based Cytoskeletons	148
<i>Manfred Heinlein</i>	
Plasmodesmata and Intercellular Communication in Plants	148
The Movement Protein of TMV Interacts with the Plant Cytoskeleton and Plasmodesmata to Facilitate Intercellular Spread of the Virus	149
The Movement Protein of TMV Targets and Modifies Cell-Cell Junctions in <i>Anabaena</i>	152
11. Viral Movement Proteins Induce Tubule Formation in Plant and Insect Cells	160
<i>Jan W.M. van Lent and Corinne Schmitt-Keichinger</i>	
Viruses, Transport Tubules and Plasmodesmata	161
Requirements for the Assembly of the Transport Tubules	165
The MPs That Form Tubules	165
Interactions between Tubules and Capsids for Cell-to-Cell Movement	166
Host Factors Involved in Targeting and Assembly of the Tubules	167
Interaction between MP and Plasma Membrane: Anchoring	169
A Model for Tubule-Mediated Cell-to-Cell Movement	169

12. Cell-Cell Movements of Transcription Factors in Plants	176
<i>Alexis Maizel</i>	
Noncell Autonomous Action of Transcription Factors by Direct Protein Transfer in Plants	176
Common Mechanistic Trends in Plant Transcription Factors Movement?	179
Biological Significance of Transcription Factor Movement in Plants?	180

Section VI: Animal Cells

13. Gap Junctions: Cell-Cell Channels in Animals	185
<i>Fabio Mammano</i>	
Connexins	185
Connexin-Related Pathologies	191
Pannexins	195
14. Tunneling Nanotubes: Membranous Channels between Animal Cells	200
<i>Hans-Hermann Gerdes and Amin Rustom</i>	
Structure	201
Formation	203
Function(s)	204
Implications and Outlook	206
15. Cytoplasmic Bridges as Cell-Cell Channels of Germ Cells	208
<i>Sami Ventelä</i>	
Cytoplasmic Bridges during Gametogenesis	208
The Cytoplasmic Bridges in Action	209
Mechanisms Needed for Cytoplasmic Material Transportation between the Germ Cells	212
16. Fusome as a Cell-Cell Communication Channel of <i>Drosophila</i> Ovarian Cyst	217
<i>Jean-René Huynh</i>	
Formation of the Fusome	218
Fusome Functions in the Formation and Differentiation of the Germline Cyst	227
17. Cytonemes as Cell-Cell Channels in Human Blood Cells	236
<i>Svetlana Ivanovna Galkina, Anatoly Georgievich Bogdanov, Georgy Natanovich Davidovich and Galina Fedorovna Sud'ina</i>	
Cytonemes of Embryonic Cells	237
Cytonemes of Human Blood Cells	237
Formation and Properties of Cytonemes Connecting Blood Cells	240
Origin and Degradation of Cytonemes	242

18. Paracellular Pores in Endothelial Barriers.....	245
<i>Luca Manzi and Gianfranco Bazzoni</i>	
Endothelial Permeability	245
Tight Junctions and Paracellular Permeability	245
The Role of Claudins in Paracellular Permeability	247
Open Issues	248
19. Channels across Endothelial Cells	251
<i>Radu V. Stan</i>	
Vascular Permeability—Pathways of Transendothelial Exchange	252
Pores across Endothelium	257
20. Molecular Transfers through Transient Lymphoid Cell-Cell Channels	267
<i>Mary Poupot, Julie Gertner and Jean-Jacques Fournié</i>	
Introduction: Transient Cell-Cell Contacts Take Place at the Immunological Synapse between Lymphoid Cells	267
Two Different Ways for Cell-Cell Transfer between Lymphoid Cells	269
A Mechanistic Model of Trogocytosis	272
Methods and Techniques for the Monitoring of in Vitro Trogocytosis	273
Intercellular Transfer in Activated Lymphoid Cells	275
Spontaneous Homotypic Intercellular Transfer in Lymphoid Cancer Cells	276
Physiological Consequences of Intercellular Transfer by T Lymphocytes	276
Physiological Consequences of Intercellular Transfer by NK Cells: Protective Role of Acquired HLA Class I Alleles, Cytokine Receptor and Deleterious Role of Acquired Viral Receptors	277
Technological Consequences of Trogocytosis	277
Trogotypes for Immuno-Monitoring the Lymphoid Cell Reactivity to Cancer	278
Transynaptic Acquisition of Functional Markers in Oncology	279
21. Cell-Cell Transport of Homeoproteins: With or Without Channels?	283
<i>Alain Joliot and Alain Prochiantz</i>	
Intercellular Transfer of Homeoproteins in Animals	283
Phylogenesis of Homeoprotein Intercellular Transfer	284
Function of Intercellular Transfer	285

22. Virological Synapse for Cell-Cell Spread of Viruses	288
<i>Eduardo Garcia and Vincent Piguet</i>	
Neural, Immunological and Virological Synapse	288
Virological Synapse during Retroviral Infection	289
Virological Synapses during HIV Infection	289
Virological Synapse for HTLV-1 Replication	291
Emerging Role for a Plant Virological Synapse	292
23. Cell-Cell Fusion: Transient Channels Leading	
to Plasma Membrane Merger	298
<i>William A. Mohler</i>	
Fertilization (Mouse)	300
Fertilization (Nematode)	300
Myoblasts (Mouse)	300
Myoblasts (Fruit Fly)	302
Placental Syncytiotrophoblast Cells (Human and Mouse)	303
Lens Fiber Cells (Mouse and Other Vertebrates)	305
Macrophages/Osteoclasts (Mouse)	305
Implanted Stem Cells (Mouse and Human)	306
Epithelia (Nematode)	306
Primary Mesenchyme (Sea Urchin)	308
Embryonic Blastomeres (Leech)	309
Haploid Mating (Yeast)	309
Fungal Hyphae	309
Summary of Molecules Driving Cell Fusion:	
Obstacles to Their Discovery	309
Structural Origins of Cell Fusion Channels?	310
Evolution and Cell Fusion	311
Index	317
