<i>Foreword by Steve Mills</i>	xxi
<i>Foreword by Ronald Schmelzer</i>	xxiii
<i>Preface</i>	xxix
<i>Acknowledgments</i>	xxxix
<i>About the Authors</i>	xxxiii

PART 1 INTRODUCTION	1
----------------------------	----------

1 Service-Oriented Architectures	3
1.1 Virtual Enterprises	4
1.1.1 Business Process Optimization	4
1.1.2 Collaborations, Mergers, and Acquisitions	6
1.1.3 Resource Sharing	8

1.2 The Need for Loose Coupling	9
1.2.1 Issues with Current Distributed System Technologies	9
1.2.2 Advantages of Message-Oriented Middleware	10
1.2.3 Future Proofing	12
1.3 What Is a Service?	13
1.3.1 Evolution of Major Software Granules	14
1.3.2 The Software Version of a Service	15
1.4 Service-Oriented Architecture	17
1.4.1 Bind/Publish/Find	18
1.4.2 Framework for SOA	21
1.5 Summary	22

2 Background **23**

2.1 XML	23
2.1.1 XML Basics	23
2.1.2 DTDs, XML Schema, and RelaxNG	25
2.1.3 XML Namespaces	26
2.2 World Wide Web	28
2.2.1 URIs	28
2.2.2 HTTP	29
2.2.3 MIME	29
2.3 Summary	30

3 Web Services: A Realization of SOA **31**

3.1 Scope of the Architecture	33
3.2 Transport Services	36
3.3 Messaging Services	36
3.3.1 SOAP	37
3.3.2 WS-Addressing	39
3.4 Service Description	40
3.4.1 WSDL	40
3.4.2 Policy	41

3.5 <i>Discovery Services</i>	42
3.5.1 <i>UDDI</i>	42
3.5.2 <i>MetaData Exchange</i>	43
3.6 <i>Quality of Service</i>	44
3.6.1 <i>WS-Security</i>	45
3.6.2 <i>Reliable Messaging</i>	46
3.6.3 <i>Transactions</i>	47
3.7 <i>Service Components</i>	49
3.7.1 <i>Composition of Web Services</i>	50
3.8 <i>Composeability</i>	50
3.9 <i>Interoperability</i>	52
3.9.1 <i>WS-I</i>	53
3.10 <i>REST</i>	54
3.10.1 <i>“Representational” in REST</i>	55
3.10.2 <i>“State Transfer” in REST</i>	55
3.10.3 <i>REST Interface Structure</i>	55
3.10.4 <i>REST and Web Services</i>	56
3.11 <i>Scope of Applicability of SOA and Web Service</i>	57
3.12 <i>Summary</i>	59

PART 2 MESSAGING FRAMEWORK

61

4 SOAP

63

4.1 <i>A Brief History of SOAP</i>	64
4.2 <i>Architectural Concepts</i>	64
4.2.1 <i>Defining Some Terms</i>	64
4.2.2 <i>The SOAP Processing Model</i>	66
4.2.3 <i>SOAP Roles</i>	68
4.2.4 <i>SOAP Faults</i>	73
4.2.5 <i>Documents and RPC</i>	75
4.2.6 <i>Message Exchange Patterns</i>	75
4.2.7 <i>SOAP Bindings</i>	78

4.3 SOAP Attachments	81
4.4 Differences Between SOAP 1.1 and 1.2	84
4.5 Summary	85

5 Web Services Addressing **87**

5.1 Addressing Web Services	88
5.2 Architectural Concepts	90
5.2.1 Endpoint References	90
5.2.2 Comparing Endpoints	92
5.2.3 Message Information Headers	93
5.2.4 Binding Endpoint References to SOAP Messages	96
5.2.5 Request-Reply Pattern in WS-Addressing	97
5.3 Example	100
5.4 Future Directions	102
5.5 Summary	102

PART 3 DESCRIBING METADATA **103**

6 Web Services Description Language (WSDL) **105**

6.1 Role of WSDL in WS-*/SOA	106
6.2 History	107
6.3 Architectural Concepts	108
6.3.1 Extensibility	108
6.3.2 Support for Multiple Type Systems	109
6.3.3 Unifying Messaging and RPC	109
6.3.4 Separation of “What” from “How” and “Where”	110
6.3.5 Support for Multiple Protocols and Transports	110
6.3.6 No Ordering	111
6.3.7 No Semantics	111

6.4 WSDL 1.1	111
6.4.1 Language Structure	112
6.4.2 Best Practices	120
6.4.3 Problems and Limitations	121
6.5 WSDL v2.0	122
6.5.1 Overall Language Structure	122
6.5.2 Interface Extensions	123
6.5.3 Elimination of <message>	123
6.5.4 Message Exchange Patterns	124
6.5.5 Services	125
6.5.6 Features and Properties	125
6.6 Future Directions	126
6.7 Summary	126
 7 Web Services Policy	 127
7.1 Motivation for WS-Policy	128
7.2 Architectural Concepts	130
7.2.1 Policy Framework	131
7.2.2 Attaching Policies to Web Services	137
7.3 Future Directions	140
7.4 Summary	141
 PART 4 DISCOVERING METADATA	 143
 8 Universal Description, Discovery, and Integration (UDDI)	 145
8.1 Role of UDDI in SOA and the WS Stack	146
8.1.1 Use of UDDI During Design and Development	146
8.1.2 Use of UDDI at Runtime	147
8.2 Motivation for UDDI	147

<i>8.3 Architectural Concepts</i>	148
<i>8.3.1 UDDI V3 Data Model</i>	148
<i>8.3.2 UDDI and WSDL</i>	152
<i>8.3.3 UDDI and WS-Policy</i>	157
<i>8.3.4 UDDI V3 Architecture and APIs</i>	158
<i>8.3.5 New Features in UDDI V3</i>	163
<i>8.4 Future Directions</i>	170
<i>8.4.1 Standardization of Taxonomy Language</i>	170
<i>8.4.2 Semantic Searching</i>	170
<i>8.4.3 Instance-Based Security</i>	170
<i>8.5 Summary</i>	171

9 Web Services Metadata Exchange **173**

<i>9.1 Architectural Concepts</i>	175
<i>9.1.1 Extensibility of Metadata Dialects</i>	175
<i>9.1.2 Use of Indirection: Metadata References and Locations</i>	176
<i>9.1.3 Metadata Request Operations</i>	177
<i>9.1.4 Default Protocol Binding</i>	181
<i>9.2 Future Directions</i>	182
<i>9.3 Summary</i>	183

PART 5 RELIABLE INTERACTION **185**

10 Reliable Messaging **187**

<i>10.1 Motivation for Reliable Messaging</i>	188
<i>10.1.1 The Network Is Reliable</i>	189
<i>10.1.2 Latency Is Zero</i>	190
<i>10.1.3 There Is One Administrator</i>	190
<i>10.2 Reliable Messaging Scenarios</i>	191
<i>10.2.1 Store and Forward</i>	191
<i>10.2.2 Batch Window</i>	191

10.2.3 Failure Recovery	192
10.2.4 Long-Running Transactions	192
10.3 Architectural Concepts	193
10.4 Processing Model	194
10.4.1 Sequence Lifecycle	196
10.4.2 Basic Syntax	198
10.4.3 Sequence Element	199
10.4.4 SequenceAcknowledgement Element	200
10.4.5 AckRequested Element	202
10.4.6 SequenceFault Element	203
10.4.7 Delivery Semantics Supported	204
10.4.8 Policy Assertions	205
10.4.9 Inactivity Timeout	205
10.4.10 Retransmission Interval	205
10.4.11 Acknowledgement Interval	206
10.4.12 Basic WS-Reliable Messaging Profile	206
10.5 Strengths and Weaknesses	207
10.6 Examples	208
10.7 Future Directions	214
10.8 Summary	215
 11 Transactions	 217
11.1 Role of Transactions in Web Services/SOA	218
11.2 Motivation for Transactions	220
11.2.1 Classic Transactions	220
11.2.2 Business Transactions	224
11.3 Architectural Concepts	228
11.3.1 Definition of Transaction Architectural Terms	228
11.3.2 Services and Protocols	230
11.4 Example	248
11.4.1 Travel Agent Scenario Using Atomic Transaction	248
11.4.2 Travel Agent Scenario Using Business Activity	252
11.5 Summary	259

PART 6 SECURITY**261**

12 Security	263
12.1 A Motivating Example: Travel Agent Web Services	265
12.2 Roles of Security in Web Services	267
12.3 Motivation for Using WS-Security	268
12.4 End-to-End Security When Intermediaries Are Present	270
12.5 Federating Multiple Security Domains	272
12.6 A Brief History	273
12.7 Architectural Concepts	273
12.8 Processing Model	276
12.8.1 XML Signature	277
12.8.2 XML Encryption	278
12.9 Putting the Pieces Together	279
12.9.1 The Basic Model	279
12.9.2 Model with Intermediary	282
12.9.3 Trust Relationships	283
12.10 Interoperability	285
12.10.1 Basic Security Profile	285
12.11 Future Directions	287
12.12 Summary	288

13 Advanced Security	289
-----------------------------	------------

13.1 WS-Trust	290
13.1.1 In-Band	294
13.1.2 Out-of-Band	294
13.2 WS-SecureConversation	294
13.3 WS-Privacy	295
13.4 WS-Federation	296
13.5 WS-Authorization	298

13.6 Web Services Authorization Model	299
13.7 Security and Policy	301
13.8 Assertion Model	301
13.9 Other Security Topics	303
13.9.1 Public-Key Cryptography	303
13.10 Non-Repudiation	304
13.10.1 Data Integrity and Data-Origin Authentication	304
13.10.2 Proof of Message Origin	307
13.10.3 Proof of Message Receipt	308
13.10.4 Delivery of Proof of Message Receipt	309
13.11 Summary	309

PART 7 SERVICE COMPOSITION

311

14 Modeling Business Processes: BPEL	313
14.1 Motivation for BPEL	315
14.1.1 A Brief History	316
14.2 Architectural Concepts	317
14.2.1 Overview of the Process Composition Model	318
14.2.2 Abstract and Executable Processes	321
14.2.3 Recursive, Type-Based Composition	322
14.2.4 Process Instance Lifecycle	327
14.2.5 Event Handling	330
14.2.6 Dealing with Exceptional Behavior	330
14.2.7 Extensibility and the Role of Web Services Policies	332
14.3 BPEL Processing Model	333
14.3.1 Deployment	333
14.3.2 Interacting with the Process	334
14.3.3 Navigating the Process Model	335
14.3.4 Scopes and Handlers	337
14.4 Future Directions	339
14.5 Summary	340

PART 8 CASE STUDIES**341****15 Case Study: Car Parts Supply Chain 343**

15.1 Scenario Description	343
15.2 Architecture	344
15.3 Web Service Descriptions	348
15.4 Messages and Protocols	352
15.5 Summary	357

16 Case Study: Ordering Service Packs 359

16.1 Scenario Description	359
16.2 Architecture	360
16.3 Web Service Descriptions	362
16.4 Messages and Protocols	366
16.5 Summary	369

PART 9 CONCLUSION**371****17 Futures 373**

17.1 Semantics	373
17.2 Wiring	375
17.3 Ordering Constraints	378
17.4 Contracting	379
17.5 Summary	380

18 Conclusion	381
18.1 A Summary of the Web Services Platform	381
18.2 Standardization	383
18.2.1 Concerns About the Standardization Process	384
18.3 Competing Specifications	385
18.4 Perspectives	387
18.4.1 Why Will It Succeed?	387
18.4.2 Risks	388
18.5 Building on the Core Platform	389
18.6 Summary	392
 References	 393
 Index	 399
