<i>Foreword</i>	<i>page xi</i>
<b>1 Introduction</b>	<b>1</b>
1.1 Optimization problems	1
1.2 Optimization with data uncertainty	5
1.3 Financial mathematics	8
<b>2 Linear programming: theory and algorithms</b>	<b>15</b>
2.1 The linear programming problem	15
2.2 Duality	17
2.3 Optimality conditions	21
2.4 The simplex method	23
<b>3 LP models: asset/liability cash-flow matching</b>	<b>41</b>
3.1 Short-term financing	41
3.2 Dedication	50
3.3 Sensitivity analysis for linear programming	53
3.4 Case study: constructing a dedicated portfolio	60
<b>4 LP models: asset pricing and arbitrage</b>	<b>62</b>
4.1 Derivative securities and the fundamental theorem of asset pricing	62
4.2 Arbitrage detection using linear programming	69
4.3 Additional exercises	71
4.4 Case study: tax clientele effects in bond portfolio management	76
<b>5 Nonlinear programming: theory and algorithms</b>	<b>80</b>
5.1 Introduction	80
5.2 Software	82
5.3 Univariate optimization	82
5.4 Unconstrained optimization	92
5.5 Constrained optimization	100
5.6 Nonsmooth optimization: subgradient methods	110

<b>6</b>	<b>NLP models: volatility estimation</b>	112
6.1	Volatility estimation with GARCH models	112
6.2	Estimating a volatility surface	116
<b>7</b>	<b>Quadratic programming: theory and algorithms</b>	121
7.1	The quadratic programming problem	121
7.2	Optimality conditions	122
7.3	Interior-point methods	124
7.4	QP software	135
7.5	Additional exercises	136
<b>8</b>	<b>QP models: portfolio optimization</b>	138
8.1	Mean-variance optimization	138
8.2	Maximizing the Sharpe ratio	155
8.3	Returns-based style analysis	158
8.4	Recovering risk-neutral probabilities from options prices	161
8.5	Additional exercises	165
8.6	Case study: constructing an efficient portfolio	167
<b>9</b>	<b>Conic optimization tools</b>	168
9.1	Introduction	168
9.2	Second-order cone programming	169
9.3	Semidefinite programming	173
9.4	Algorithms and software	177
<b>10</b>	<b>Conic optimization models in finance</b>	178
10.1	Tracking error and volatility constraints	178
10.2	Approximating covariance matrices	181
10.3	Recovering risk-neutral probabilities from options prices	185
10.4	Arbitrage bounds for forward start options	187
<b>11</b>	<b>Integer programming: theory and algorithms</b>	192
11.1	Introduction	192
11.2	Modeling logical conditions	193
11.3	Solving mixed integer linear programs	196
<b>12</b>	<b>Integer programming models: constructing an index fund</b>	212
12.1	Combinatorial auctions	212
12.2	The lockbox problem	213
12.3	Constructing an index fund	216
12.4	Portfolio optimization with minimum transaction levels	222
12.5	Additional exercises	223
12.6	Case study: constructing an index fund	224

<b>13 Dynamic programming methods</b>	225
13.1 Introduction	225
13.2 Abstraction of the dynamic programming approach	233
13.3 The knapsack problem	236
13.4 Stochastic dynamic programming	238
<b>14 DP models: option pricing</b>	240
14.1 A model for American options	240
14.2 Binomial lattice	242
<b>15 DP models: structuring asset-backed securities</b>	248
15.1 Data	250
15.2 Enumerating possible tranches	252
15.3 A dynamic programming approach	253
15.4 Case study: structuring CMOs	254
<b>16 Stochastic programming: theory and algorithms</b>	255
16.1 Introduction	255
16.2 Two-stage problems with recourse	256
16.3 Multi-stage problems	258
16.4 Decomposition	260
16.5 Scenario generation	263
<b>17 Stochastic programming models: Value-at-Risk and Conditional Value-at-Risk</b>	271
17.1 Risk measures	271
17.2 Minimizing CVaR	274
17.3 Example: bond portfolio optimization	276
<b>18 Stochastic programming models: asset/liability management</b>	279
18.1 Asset/liability management	279
18.2 Synthetic options	285
18.3 Case study: option pricing with transaction costs	288
<b>19 Robust optimization: theory and tools</b>	292
19.1 Introduction to robust optimization	292
19.2 Uncertainty sets	293
19.3 Different flavors of robustness	295
19.4 Tools and strategies for robust optimization	302
<b>20 Robust optimization models in finance</b>	306
20.1 Robust multi-period portfolio selection	306
20.2 Robust profit opportunities in risky portfolios	311
20.3 Robust portfolio selection	313
20.4 Relative robustness in portfolio selection	315
20.5 Moment bounds for option prices	317
20.6 Additional exercises	318

<b>Appendix A</b>	<b>Convexity</b>	320
<b>Appendix B</b>	<b>Cones</b>	322
<b>Appendix C</b>	<b>A probability primer</b>	323
<b>Appendix D</b>	<b>The revised simplex method</b>	327
