Preface	v
1 Preliminaries	1
1.1 Notation	1
1.2 Plain bases and unconditional bases	1
1.3 Orthogonal bases and frames	5
1.4 Orthogonal projections and complements	8
2 Time-frequency analysis	10
2.1 Fourier analysis	10
2.2 The windowed Fourier transform and Gabor bases	18
2.3 Local trigonometric expansions	23
2.4 The wavelet transform	27
3 Multiresolution analysis and wavelets	31
3.1 Multiresolution analysis	31
3.2 The Haar wavelet and MRA	34
3.3 Algorithm: The fast wavelet transform	38
3.4 Daubechies style wavelets	42
3.5 Other plain wavelets	52
4 Friends, relatives, and mutations of wavelets	54
4.1 Biorthogonal MRA and wavelets	54
4.2 Multiwavelets	60
4.3 Wavelets in 2-D	64
4.4 Wavelet packets	65
4.5 Second generation wavelets	68
4.6 An alternative localization notion and the prolate spheroidal wave functions.	75
5 Assorted applications	77
5.1 Signal/image processing	77
5.2 Calculus with wavelets	80
5.3 Applications to functional analysis	85
5.4 Applications to differential equations	88
6 References and further reading	92

Internet references	95
Bibliography	97
Index	107
