<i>Preface</i>	<i>xv</i>
<i>Volumes in Series</i>	<i>xvii</i>

1. Practical Approaches to Protein Folding and Assembly: Spectroscopic Strategies in Thermodynamics and Kinetics **1**

Jad Walters, Sara L. Milam, and A. Clay Clark

1. Introduction	2
2. Equilibrium Unfolding	3
3. Measuring Folding Kinetics	21
References	36

2. Using Thermodynamics to Understand Progesterone Receptor Function: Method and Theory **41**

Keith D. Connaghan-Jones and David L. Bain

1. Introduction	42
2. Assessing Protein Functional and Structural Homogeneity	43
3. Dissecting Linked Assembly Reactions	46
4. Analysis and Dissection of Natural Promoters	54
5. Measuring the Energetics of Coactivator Recruitment	62
6. Correlation to Biological Function	64
7. Conclusions and Future Directions	67
Acknowledgments	68
References	68

3. Direct Quantitation of Mg^{2+} -RNA Interactions by Use of a Fluorescent Dye **71**

Dan Grilley, Ana Maria Soto, and David E. Draper

1. Introduction	72
2. General Principles	73
3. Ion-Binding Properties of HQS	78
4. Preparation of Solutions and Reagents	81
5. Instrumentation and Data Collection Protocols	84

6. Data Analysis	88
7. Controls and Further Considerations	90
Acknowledgments	92
References	92
 4. Analysis of Repeat-Protein Folding Using Nearest-Neighbor Statistical Mechanical Models	 95
Tural Aksel and Doug Barrick	
1. Historical Overview of Ising Models and Motivation for the Present Review	96
2. Linear Repeat Proteins and Their Connection to Linear Ising Models	97
3. Formulating a Homopolymer Partition Function and the Zipper Approximation	100
4. Matrix Approach: Homopolymers	104
5. Matrix Approach: Heteropolymers	109
6. Solvability Criteria for Ising Models Applied to Repeat-Protein Folding	111
7. Matrix Homopolymer Analysis of Consensus TPR Folding	115
8. Matrix Heteropolymer Analysis of Consensus Ankyrin Repeat Folding	119
9. Summary and Future Directions	123
Acknowledgments	124
References	124
 5. Isothermal Titration Calorimetry: General Formalism Using Binding Polynomials	 127
Ernesto Freire, Arne Schön, and Adrian Velazquez-Campoy	
1. Introduction	128
2. The Binding Polynomial	129
3. Microscopic Constants and Cooperativity	131
4. Independent or Cooperative Binding?	132
5. Analysis of ITC Data Using Binding Polynomials	133
6. A Typical Case: Macromolecule with Two Ligand-Binding Sites	135
7. Data Analysis	137
8. Data Interpretation	141
9. An Experimental Example	146
10. Experimental Situations from the Literature	147
11. Macromolecule with Three Ligand-Binding Sites	150
12. Conclusions	150
Appendix	151
Acknowledgment	154
References	154

6. Kinetic and Equilibrium Analysis of the Myosin ATPase	157
Enrique M. De La Cruz and E. Michael Ostap	
1. Introduction	158
2. Reagents and Equipment Used for all Assays	159
3. Steady-State ATPase Activity of Myosin	161
4. Steady-State Measurement of Actomyosin Binding Affinities	166
5. Transient Kinetic Analysis of the Individual ATPase Cycle Transitions	170
6. Kinetic Simulations	188
Acknowledgments	189
References	190
7. The Hill Coefficient: Inadequate Resolution of Cooperativity in Human Hemoglobin	193
Jo M. Holt and Gary K. Ackers	
1. Introduction	194
2. Cooperativity and Intrinsic Binding	194
3. The Macroscopic Binding Isotherm	197
4. The Hill Coefficient	200
5. Microscopic Cooperativity in Hemoglobin	205
6. Summary	211
References	212
8. Methods for Measuring the Thermodynamic Stability of Membrane Proteins	213
Heedeok Hong, Nathan H. Joh, James U. Bowie, and Lukas K. Tamm	
1. Introduction	214
2. Two Classes of Membrane Proteins	215
3. Methods for Measuring Transmembrane Domain Oligomer Stability	216
4. Methods for Measuring Multipass α -helical Membrane Protein Stability	219
5. Methods to Study the Stability of β -barrel Membrane Proteins	222
6. A Few Salient Results on Forces that Stabilize Membrane Proteins	227
7. Conclusion and Outlook	231
Acknowledgments	232
References	232
9. NMR Analysis of Dynein Light Chain Dimerization and Interactions With Diverse Ligands	237
Gregory Benison and Elisar Barbar	
1. NMR Methodology	238
2. Monomer-dimer Equilibrium Coupled to Electrostatics	241

3. Dimerization is Coupled to Ligand Binding	246
4. Folding is Coupled to Binding	247
5. Allostery in LC8	251
6. Summary	255
References	256
10. Characterization of Parvalbumin and Polcalcin Divalent Ion Binding by Isothermal Titration Calorimetry	259
Michael T. Henzl	
1. Introduction	260
2. Practical Aspects of Data Collection	262
3. Illustrative Global ITC Analyses of Divalent Ion Binding	281
4. Conclusion	295
Acknowledgment	295
References	295
11. Energetic Profiling of Protein Folds	299
Jason Vertrees, James O. Wrabl, and Vincent J. Hilser	
1. Introduction	300
2. Modeling the Native State Ensemble of Proteins using Statistical Thermodynamics	301
3. Energetic Profiles of Proteins Derived from Thermodynamics of the Native State Ensemble	304
4. Principal Components Analysis of Energetic Profile Space	306
5. Energetic Profiles are Conserved Between Homologous Proteins	308
6. Direct Alignment of Energetic Profiles Based on a Variant of the CE Algorithm	315
7. CE Algorithm Described for Structure Coordinates	316
8. Necessary Deviations from the CE Algorithm to Accommodate Energetic Profiles	317
9. Towards a Thermodynamic Homology of Fold Space: Clustering Energetic Profiles using STEPH	318
10. Energetic Profiles Provide a Vehicle to Discover Conserved Substructures in the Absence of Known Homology	321
11. Conclusion	323
Acknowledgments	325
References	325

12. Model Membrane Thermodynamics and Lateral Distribution of Cholesterol: From Experimental Data To Monte Carlo Simulation	329
Juyang Huang	
1. Introduction	330
2. Materials and Methods	331
3. Result and Discussion	338
4. Concluding Remarks	362
Acknowledgments	362
References	363
13. Thinking Inside the Box: Designing, Implementing, and Interpreting Thermodynamic Cycles to Dissect Cooperativity in RNA and DNA Folding	365
Nathan A. Siegfried and Philip C. Bevilacqua	
1. Introduction	366
2. Folding Cooperativity Defined	367
3. Thermodynamic Boxes: Design, Implementation, and Interpretation	369
4. Thermodynamic Cubes: Design, Implementation, and Interpretation	374
5. Examples of Cooperativity in RNA	376
6. Measuring Thermodynamic Parameters by UV Melting	379
7. Concluding Remarks	390
Acknowledgment	391
References	391
14. The Thermodynamics of Virus Capsid Assembly	395
Sarah Katen and Adam Zlotnick	
1. Introduction	396
2. The Structural Basis of Capsid Stability	397
3. Analysis of Capsid Stability	401
4. Applications of Thermodynamic Evaluation of Virus Capsid Stability	408
5. Concluding Remarks	414
References	414
15. Extracting Equilibrium Constants from Kinetically Limited Reacting Systems	419
John J. Correia and Walter F. Stafford	
1. Introduction	420
2. Methods	421
3. Simulation and Analysis of Dimerization	421

4. Kinetically Mediated Dimerization	428
5. A Stepwise Approach	436
6. Final Thoughts	442
Acknowledgments	443
References	443
