PART I THE PHYSICS OF RELATIVISTIC HYDRODYNAMICS

1	A Brief Review of General Relativity	3
1.1	Why this chapter?	3
1.2	The concept of spacetime	4
1.3	Spacetime as a manifold	5
1.3.1	Coordinates	6
1.3.2	Curves and paths	9
1.3.3	Tangent vectors	9
1.3.4	Gradients of a function	12
1.3.5	A geometrical view of vectors and covectors	13
1.3.6	Tensors	15
1.3.7	Tensor algebra	17
1.3.8	The most important tensor: the metric	20
1.3.9	Splitting a tensor through a vector	23
1.4	Flat spacetime: special relativity	24
1.5	Curved spacetimes: general relativity	29
1.5.1	Lie derivative	31
1.5.2	Covariant derivative and Christoffel symbols	34
1.5.3	Symmetries and Killing vector fields	37
1.5.4	Geodesic equation	38
1.5.5	The Riemann tensor	41
1.6	Einstein equations	46
1.7	Spacetimes of astrophysical relevance	48
1.7.1	Non-rotating black holes: the Schwarzschild solution	49
1.7.2	Rotating black holes: the Kerr solution	54
1.7.3	The Friedmann–Robertson–Walker metric	59
1.8	Gravitational radiation	61
1.9	Further reading	66
1.10	Problems	67
2	A Kinetic-Theory Description of Fluids	68
2.1	On the fluid approximation	68
2.2	Newtonian kinetic theory	70
2.2.1	The Boltzmann equation	70
2.2.2	The H -theorem	75
2.2.3	The moment equations	78
2.2.4	The Maxwell–Boltzmann equilibrium distribution	81

2.2.5	The zero-order approximation: perfect fluids	84
2.2.6	The first-order approximation: non-perfect fluids	87
2.3	Relativistic kinetic theory	89
2.3.1	The relativistic Boltzmann equation	90
2.3.2	Relativistic transport fluxes	91
2.3.3	The relativistic H -theorem	93
2.3.4	The relativistic moment equations	95
2.3.5	The general-relativistic hydrodynamic equations	96
2.3.6	Relativistic equilibrium distributions	97
2.3.7	The laws of thermodynamics	101
2.4	Equations of state	103
2.4.1	Degenerate relativistic fluid	109
2.4.2	Non-degenerate relativistic fluid	110
2.4.3	Non-degenerate non-relativistic fluid	111
2.4.4	Ultrarelativistic fluid	112
2.4.5	Degenerate Fermi fluid	114
2.4.6	Ideal fluid	115
2.4.7	Polytropic fluid	118
2.4.8	Radiation fluid	123
2.4.9	Dark-energy fluid	126
2.4.10	Newtonian and relativistic barotropic fluids	128
2.5	Further reading	131
2.6	Problems	132
3	Relativistic Perfect Fluids	133
3.1	Kinematic properties of fluids	133
3.1.1	Kinematic shear, expansion and vorticity	133
3.1.2	Evolution laws of the kinematic quantities	137
3.2	Mass current and energy–momentum of perfect fluids	138
3.3	Hydrodynamics equations of perfect fluids	143
3.4	Perfect fluids and symmetries	145
3.5	The Newtonian limit of the hydrodynamic equations	147
3.6	Stationary flows	150
3.6.1	Bernoulli’s theorem	150
3.6.2	Relativistic Bernoulli theorem	152
3.7	Irrotational flows	152
3.7.1	Newtonian irrotational flows	152
3.7.2	Kelvin–Helmholtz theorem	154
3.7.3	Relativistic vorticity	155
3.7.4	Relativistic irrotational flows	157
3.7.5	Relativistic Kelvin–Helmholtz theorem	159
3.8	Isentropic flows	162
3.9	A velocity-potential approach to relativistic hydrodynamics	164
3.10	A variational principle for relativistic hydrodynamics	168
3.11	Perfect multifluids	175
3.11.1	Coupled multifluids	175

3.11.2	Interacting multifluids	179
3.12	Further reading	187
3.13	Problems	188
4	Linear and Nonlinear Hydrodynamic Waves	190
4.1	Hyperbolic systems of partial differential equations	190
4.1.1	Quasi-linear formulation	190
4.1.2	Conservative formulation	195
4.2	Linear and nonlinear behaviour	198
4.2.1	Characteristic equations for linear systems	198
4.2.2	Riemann invariants	200
4.2.3	Characteristic curves and caustics	203
4.2.4	Domain of determinacy and region of influence	206
4.3	Linear hydrodynamic waves	208
4.3.1	Sound waves	208
4.4	Nonlinear hydrodynamic waves	209
4.4.1	Simple waves and discontinuous waves	209
4.4.2	Rarefaction waves	211
4.4.3	Shock waves	214
4.4.4	Contact discontinuities	222
4.5	The Riemann problem	223
4.6	Solution of the one-dimensional Riemann problem	227
4.6.1	Limiting relative velocities	228
4.7	Solution of the multidimensional Riemann problem	233
4.7.1	Jumps across a shock wave	235
4.7.2	Jumps across a rarefaction wave	236
4.7.3	Limiting relative velocities	237
4.7.4	Relativistic effects in multidimensional Riemann problems	239
4.7.5	Shock-detection techniques	243
4.8	Stability of shock waves	245
4.9	General-relativistic discontinuities	249
4.10	Further reading	255
4.11	Problems	256
5	Reaction Fronts: Detonations and Deflagrations	258
5.1	Basic properties of reaction fronts	258
5.2	Reaction adiabat	259
5.3	Relativistic detonations	262
5.4	Relativistic deflagrations	266
5.5	Stability of reaction fronts	268
5.5.1	Stability of detonations	271
5.5.2	Stability of deflagrations	281
5.6	Further reading	283
5.7	Problems	284
6	Relativistic Non-Perfect Fluids	285
6.1	On the four-velocity of a non-perfect fluid	285

6.2	The energy–momentum tensor of non-perfect fluids	287
6.3	Hydrodynamic equations of non-perfect fluids	290
6.3.1	The general form of the momentum and energy equations	290
6.3.2	The equilibrium state	291
6.4	Classical Irreversible Thermodynamics (first-order theories)	291
6.4.1	The constitutive equations	292
6.4.2	The Newtonian limit: Navier–Stokes and heat conduction	294
6.5	The importance of a causal theory	296
6.5.1	Parabolic versus hyperbolic	296
6.5.2	Non-causality of Classical Irreversible Thermodynamics	298
6.6	Extended Irreversible Thermodynamics (second-order theories)	299
6.6.1	The Israel–Stewart formulation	300
6.6.2	Characteristic speeds of the Israel–Stewart formulation	303
6.6.3	Divergence-type theories	306
6.7	Concluding remarks	312
6.8	Further reading	314
6.9	Problems	315

PART II NUMERICAL RELATIVISTIC HYDRODYNAMICS

7	Formulations of the Einstein–Euler Equations	319
7.1	The 3+1 decomposition of spacetime	319
7.2	Formulations of the Einstein equations	324
7.2.1	Spherically symmetric Lagrangian formulations	325
7.2.2	The ADM formulation	329
7.2.3	Conformal traceless formulations	335
7.2.4	Gauge conditions in 3+1 formulations	343
7.2.5	The generalised harmonic formulation	346
7.2.6	Constraint equations, initial data and constrained evolution	350
7.3	Formulations of the hydrodynamic equations	360
7.3.1	The Wilson formulation	360
7.3.2	The importance of conservative formulations	362
7.3.3	The 3+1 “Valencia” formulation	364
7.3.4	The covariant formulation	374
7.3.5	The light-cone formulation	375
7.3.6	The discontinuous Galerkin formulation	377
7.4	Further reading	383
7.5	Problems	384
8	Numerical Relativistic Hydrodynamics: Finite-Difference Methods	386
8.1	The discretisation process	387
8.2	Numerical errors	390
8.2.1	Consistency, convergence and stability	394
8.3	Finite-difference methods	396
8.3.1	Analysis of the numerical stability	396
8.3.2	The upwind scheme	399

8.3.3	The FTCS scheme	401
8.3.4	The Lax–Friedrichs scheme	402
8.3.5	The leapfrog scheme	404
8.3.6	The Lax–Wendroff scheme	405
8.3.7	Kreiss–Oliger dissipation	407
8.4	Artificial-viscosity approaches	409
8.5	Further reading	412
8.6	Problems	413
9	Numerical Relativistic Hydrodynamics: HRSC Methods	414
9.1	Conservative schemes	414
9.1.1	Rankine–Hugoniot conditions	414
9.1.2	Finite-volume conservative numerical schemes	416
9.1.3	Finite-difference conservative numerical schemes	418
9.2	Upwind methods	420
9.2.1	Monotone methods	420
9.2.2	Total variation diminishing methods	421
9.2.3	Godunov methods	423
9.3	Reconstruction techniques	427
9.3.1	Slope-limiter methods	428
9.3.2	The piecewise-parabolic method	430
9.3.3	Reconstruction in characteristic variables	434
9.4	Approximate Riemann solvers	436
9.4.1	Incomplete Riemann solvers	436
9.4.2	Complete Riemann solvers	439
9.5	The method of lines	447
9.5.1	Explicit Runge–Kutta methods	448
9.5.2	Implicit-explicit Runge–Kutta methods	449
9.6	Central numerical schemes	452
9.6.1	Staggered central schemes	453
9.6.2	Non-staggered central schemes	455
9.7	Further reading	457
9.8	Problems	458
10	Numerical Relativistic Hydrodynamics: High-Order Methods	459
10.1	Why high-order numerical methods?	459
10.2	ENO and WENO methods for hyperbolic conservation laws	460
10.2.1	Finite-volume ENO schemes	461
10.2.2	Finite-volume WENO schemes	466
10.2.3	Finite-difference ENO schemes	468
10.2.4	Finite-difference WENO schemes	472
10.3	Discontinuous Galerkin methods	472
10.3.1	The essence of DG methods	472
10.3.2	An example: a RKDG scheme in spherical symmetry	475
10.4	The ADER approach	479
10.4.1	The original formulation	479

10.4.2 The local spacetime DG scheme	482
10.5 Extension to multidimensional problems	485
10.5.1 Finite-difference multidimensional schemes	486
10.5.2 Finite-volume multidimensional schemes	487
10.6 Further reading	489
10.7 Problems	490

PART III APPLICATIONS OF RELATIVISTIC HYDRODYNAMICS

11 Relativistic Hydrodynamics of Non-Selfgravitating Fluids	493
11.1 Similar and self-similar flows	494
11.1.1 One-dimensional self-similar flows	495
11.1.2 Self-similar hydrodynamics of a bubble	501
11.1.3 Self-similar hydrodynamics of a drop	504
11.2 Relativistic blast waves	507
11.3 Spherical flows onto and out of a compact object	513
11.4 Spherical accretion onto a black hole	516
11.5 Non-spherical accretion onto a moving black hole	524
11.5.1 Accreting potential flows	525
11.5.2 Bondi–Hoyle–Lyttleton flows	529
11.6 Fluids in circular motion around a black hole	537
11.6.1 von Zeipel cylinders	537
11.7 Geometrically thick tori	541
11.7.1 The “runaway” instability	548
11.7.2 On the sound speed in polytropic tori	549
11.7.3 Thick tori in Schwarzschild–de Sitter spacetimes	551
11.8 Relativistic accreting discs	553
11.8.1 Rest-mass conservation	558
11.8.2 Radial momentum conservation	559
11.8.3 Angular momentum conservation	560
11.8.4 Hydrostatic vertical equilibrium	562
11.8.5 Energy conservation	563
11.9 Relativistic jets	565
11.9.1 Apparently superluminal jets	566
11.9.2 Hydrodynamic acceleration mechanisms	569
11.9.3 Numerical modelling of relativistic jets	577
11.10 Relativistic heavy-ion collisions	580
11.10.1 Basic concepts	580
11.10.2 One-dimensional Bjorken flow	584
11.10.3 Cylindrically symmetric flows	585
11.11 Further reading	589
11.12 Problems	590
12 Relativistic Hydrodynamics of Selfgravitating Fluids	593
12.1 Spherical stars	593
12.2 Gravastars	599

12.3	Rotating stars	604
12.3.1	Uniformly rotating stars	604
12.3.2	Differentially rotating stars	608
12.4	Collapse of a compact star to a black hole	612
12.4.1	Dust collapse: the Oppenheimer–Snyder solution	612
12.4.2	Fluid collapse	617
12.5	Dynamics of binary neutron stars	623
12.5.1	Broadbrush picture	623
12.5.2	Dynamics of equal-mass binaries	627
12.5.3	Dynamics of unequal-mass binaries	637
12.6	Dynamics of black-hole–neutron-star binaries	647
12.6.1	Broadbrush picture	648
12.7	Further reading	657
12.8	Problems	658
Appendix A Geometrised System of Units		659
Appendix B Notable Thermodynamic Expressions		661
B.1	Thermodynamic quantities and potentials	661
B.2	Maxwell relations	663
Appendix C Notable Tensors		665
C.1	Relativistic expressions	665
C.2	Newtonian expressions	667
Appendix D Common Practices in Numerical Relativistic Hydrodynamics		668
D.1	Conversion from conserved to primitive variables	668
D.1.1	Analytic equations of state	668
D.1.2	Tabulated equations of state	671
D.2	Treatment of atmospheres	673
D.3	Guaranteeing the positivity of pressure	674
D.4	Domain excision	675
Appendix E Numerical Building Blocks		678
E.1	TVD slope limiters	678
E.2	Basic Riemann solvers	679
E.3	Reference one-dimensional pseudo-code	680
References		682
