

Contents

List of contributors	iv
Contents	v
Abbreviations	viii
Introduction	
Paper and durability	3
1.1 Introduction	3
1.2 Paper and its production	4
1.3 Paper degradation	5
1.4 References	8
Degradation and ageing of polymers	9
2.1 Introduction	9
2.2 Modes of degradation	10
2.3 Thermolysis	10
2.4 Oxidation	13
2.5 Light-induced degradation	15
2.6 Propagation and advanced degradation phases	17
2.7 General stabilisation strategies	19
2.8 Conclusions	22
2.9 References	23
Methodology	
Methodology and analytical techniques in paper stability studies	27
3.1 Introduction	27
3.2 Mechanical properties	27
3.3 Paper pH	28
3.4 Determination of alkaline reserve	30
3.5 Viscometry	30
3.6 Size exclusion chromatography	31
3.7 IR spectroscopy	32
3.8 Diffuse reflectance spectrophotometry, colourimetry and spectrofluorimetry	33
3.9 Degradation of linear polymers	35
3.9 The Arrhenius equation	37
3.10 Accelerated degradation studies	40
3.11 Conclusions	43
3.12 References	44
Experimental techniques in studies of photo-stability	49
4.1 Introduction: Accelerated photoageing – a century-long story	49
4.2 Review of outdoor weathering sites and accelerated photoageing units	50
4.3 Acceleration of photooxidation reactions	57
4.4 Conclusions	63
4.5 References	64

Chemiluminescence from polymers	71
5.1 Introduction	71
5.2 General classification of chemiluminescence from polymers	71
5.3 The effect of temperature and atmosphere	74
5.4 The effect of molar mass	76
5.5 The effect of antioxidants and polymer stabilizers	77
5.6 Mechanisms leading to chemiluminescence during polymer oxidation	78
5.7 A simple kinetic model of non-isothermal chemiluminescence	81
5.8 Fit of isothermal experimental data	84
5.9 Instrumentation	86
5.10 Conclusions	88
5.11 References	88

Degradation

Acid-catalysed degradation	93
6.1 Introduction	93
6.2 Paper acidity in library collections. The example of Poland	93
6.3 Acid-catalysed degradation – background	96
6.4 Studies at Jagiellonian University	101
6.5 Diffusion phenomena inside books	105
6.6 The concept of mixed-control kinetics – acid hydrolysis and oxidation	106
6.7 Perspectives	108
6.8 References	108

Thermo-oxidative degradation	111
7.1 Introduction	111
7.2 Autoxidation	112
7.3 Initiation of oxidation	113
7.4 Peroxides and hydroxyl radicals	117
7.5 Role of water	119
7.6 Thermo-oxidative degradation: Ca or Mg?	123
7.7 Antioxidants	126
7.8 Conclusions	128
7.9 References	129

Chemiluminescence of cellulose and paper	133
8.1 Introduction	133
8.2 Sample morphology and size	134
8.3 Chemiluminescence in inert atmosphere	135
8.4 Chemiluminescence in oxidative atmosphere	136
8.5 Chemiluminescence following irradiation with light	145
8.6 Conclusions	146
8.7 References	147

Photooxidative degradation	149
9.1 Introduction	149
9.2 Photooxidative degradation of polymers	149
9.3 Free radicals during irradiation of cellulose	152
9.4 Depolymerisation of cellulose due to irradiation	153

9.5	Natural and accelerated photoageing	155
9.6	Natural light and accelerated photoageing	157
9.7	Conclusions	160
9.8	References	161
Stabilisation		
Air pollution and its prevention		165
10.1	Introduction	165
10.2	Materials used in the study	166
10.3	Archival storage conditions and air purification	168
10.4	Study of pollutants	169
10.5	Evaluation of pollution	170
10.6	Study of stored materials	172
10.7	Conclusions	177
10.8	References	177
Stabilisation strategies		181
11.1	Introduction	181
11.2	Aqueous deacidification	181
11.3	Thermo-oxidative stabilisation study using model paper	186
11.4	Thermo-oxidative stabilisation studies using papers for common use	189
11.5	Stability of real-life paper samples during photodegradation	195
11.6	Conclusions	196
11.8	References	198
Outlook		199
12.1	Introduction	199
12.2	Analytical methodology	199
12.3	Degradation mechanisms	200
12.4	Experimental approach to ageing	200
12.5	Standards on paper ageing	201
12.6	Storage	201
12.7	Development of applications	202
12.8	References	203
Index		205
