

Contents

<i>Preface</i>	vii
Introduction	1
Section 1 Arbuscular mycorrhizas	11
1 The symbionts forming arbuscular mycorrhizas	13
2 Colonization of roots and anatomy of arbuscular mycorrhizas	42
3 Genetic, cellular and molecular interactions in the establishment of arbuscular mycorrhizas	91
4 Growth and carbon economy of arbuscular mycorrhizal symbionts	117
5 Mineral nutrition, toxic element accumulation and water relations of arbuscular mycorrhizal plants	145
Section 2 Ectomycorrhizas	189
6 Structure and development of ectomycorrhizal roots	191
7 Ectendo- and arbutoid mycorrhizas	269
8 Growth and carbon allocation of ectomycorrhizal symbionts	295
9 Nitrogen mobilization and nutrition in ectomycorrhizal plants	321
10 Phosphorus and base cation nutrition, heavy metal accumulation and water relations of ectomycorrhizal plants	349
Section 3 Ericoid, orchid and mycoheterotrophic mycorrhizas	387
11 Ericoid mycorrhizas	389
12 Mycorrhizas of green orchids	419
13 Mycorrhizas in achlorophyllous plants (mycoheterotrophs)	458
14 Fungal symbioses in lower land plants	507
Section 4 Functioning of mycorrhizas in broader contexts	523
15 The roles of mycorrhizas in successional processes and in selected biomes	525
16 Mycorrhizas in ecological interactions	573
17 Mycorrhizas in agriculture, horticulture and forestry	611
References	637
Index	769

The colour plate section appears at the back of the book
