

Contents

Dedication	iii
Preface	iv
User's Guide	vii
Acknowledgments	x

SECTION I

INTRODUCTION TO EXERCISE PHYSIOLOGY 1

- 1. Origins of Exercise Physiology: Foundations
for the Field of Study 3**

SECTION II

NUTRITION AND ENERGY 31

- 2. Macronutrients and Micronutrients 33**
- 3. Food Energy and Optimum Nutrition
for Exercise 81**
- 4. Nutritional and Pharmacologic
Aids to Performance 109**

SECTION III

ENERGY TRANSFER 149

- 5. Fundamentals of Human Energy Transfer 151**
- 6. Human Energy Transfer During Exercise 185**
- 7. Measuring and Evaluating Human Energy-
Generating Capacities During Exercise 203**
- 8. Energy Expenditure During Rest and
Physical Activity 237**

SECTION IV

THE PHYSIOLOGIC SUPPORT SYSTEMS 263

- 9. The Pulmonary System and Exercise 265**
- 10. The Cardiovascular System and Exercise 301**
- 11. The Neuromuscular System and Exercise 337**
- 12. Hormones, Exercise, and Training 377**

SECTION V

EXERCISE TRAINING AND ADAPTATIONS 407

- 13. Training the Anaerobic and
Aerobic Energy Systems 409**
- 14. Training Muscles to Become Stronger 443**
- 15. Factors Affecting Physiologic Function:
The Environment and Special Aids
to Performance 493**

SECTION VI

OPTIMIZING BODY COMPOSITION, SUCCESSFUL AGING, AND HEALTH-RELATED EXERCISE BENEFITS 531

- 16. Body Composition, Obesity, and
Weight Control 533**
- 17. Physical Activity, Exercise, Successful
Aging, and Disease Prevention 595**
- 18. Clinical Aspects of Exercise Physiology 631**

Appendix

- A. The Metric System and Conversion
Constants in Exercise Physiology 669**
- B. Metabolic Computations in Open-Circuit
Spirometry 672**
- C. Evaluation of Body Composition—
Girth Method 676**
- D. Evaluation of Body Composition—
Skinfold Method 683**
