<i>Preface</i>	v
<i>Introduction</i>	1
1. Dynamic equations	7
1.1 Preliminary. Fibre bundles over \mathbb{R}	7
1.2 Autonomous dynamic equations	13
1.3 Dynamic equations	16
1.4 Dynamic connections	18
1.5 Non-relativistic geodesic equations	22
1.6 Reference frames	27
1.7 Free motion equations	30
1.8 Relative acceleration	33
1.9 Newtonian systems	36
1.10 Integrals of motion	38
2. Lagrangian mechanics	43
2.1 Lagrangian formalism on $Q \rightarrow \mathbb{R}$	43
2.2 Cartan and Hamilton–De Donder equations	49
2.3 Quadratic Lagrangians	51
2.4 Lagrangian and Newtonian systems	56
2.5 Lagrangian conservation laws	58
2.5.1 Generalized vector fields	58
2.5.2 First Noether theorem	60
2.5.3 Noether conservation laws	64
2.5.4 Energy conservation laws	66
2.6 Gauge symmetries	68

3.	Hamiltonian mechanics	73
3.1	Geometry of Poisson manifolds	73
3.1.1	Symplectic manifolds	74
3.1.2	Presymplectic manifolds	76
3.1.3	Poisson manifolds	77
3.1.4	Lichnerowicz–Poisson cohomology	82
3.1.5	Symplectic foliations	83
3.1.6	Group action on Poisson manifolds	87
3.2	Autonomous Hamiltonian systems	89
3.2.1	Poisson Hamiltonian systems	90
3.2.2	Symplectic Hamiltonian systems	91
3.2.3	Presymplectic Hamiltonian systems	91
3.3	Hamiltonian formalism on $Q \rightarrow \mathbb{R}$	93
3.4	Homogeneous Hamiltonian formalism	98
3.5	Lagrangian form of Hamiltonian formalism	99
3.6	Associated Lagrangian and Hamiltonian systems	100
3.7	Quadratic Lagrangian and Hamiltonian systems	104
3.8	Hamiltonian conservation laws	105
3.9	Time-reparametrized mechanics	110
4.	Algebraic quantization	113
4.1	GNS construction	113
4.1.1	Involutive algebras	113
4.1.2	Hilbert spaces	115
4.1.3	Operators in Hilbert spaces	118
4.1.4	Representations of involutive algebras	119
4.1.5	GNS representation	121
4.1.6	Unbounded operators	124
4.2	Automorphisms of quantum systems	126
4.3	Banach and Hilbert manifolds	131
4.3.1	Real Banach spaces	131
4.3.2	Banach manifolds	132
4.3.3	Banach vector bundles	134
4.3.4	Hilbert manifolds	136
4.3.5	Projective Hilbert space	143
4.4	Hilbert and C^* -algebra bundles	144
4.5	Connections on Hilbert and C^* -algebra bundles	147
4.6	Instantwise quantization	151

5.	Geometric quantization	155
5.1	Geometric quantization of symplectic manifolds	156
5.2	Geometric quantization of a cotangent bundle	160
5.3	Leafwise geometric quantization	162
5.3.1	Prequantization	163
5.3.2	Polarization	169
5.3.3	Quantization	170
5.4	Quantization of non-relativistic mechanics	174
5.4.1	Prequantization of T^*Q and V^*Q	176
5.4.2	Quantization of T^*Q and V^*Q	178
5.4.3	Instantwise quantization of V^*Q	180
5.4.4	Quantization of the evolution equation	183
5.5	Quantization with respect to different reference frames . .	185
6.	Constraint Hamiltonian systems	189
6.1	Autonomous Hamiltonian systems with constraints	189
6.2	Dirac constraints	193
6.3	Time-dependent constraints	196
6.4	Lagrangian constraints	199
6.5	Geometric quantization of constraint systems	201
7.	Integrable Hamiltonian systems	205
7.1	Partially integrable systems with non-compact invariant submanifolds	206
7.1.1	Partially integrable systems on a Poisson manifold	206
7.1.2	Bi-Hamiltonian partially integrable systems	210
7.1.3	Partial action-angle coordinates	214
7.1.4	Partially integrable system on a symplectic manifold	217
7.1.5	Global partially integrable systems	221
7.2	KAM theorem for partially integrable systems	225
7.3	Superintegrable systems with non-compact invariant submanifolds	228
7.4	Globally superintegrable systems	232
7.5	Superintegrable Hamiltonian systems	235
7.6	Example. Global Kepler system	237
7.7	Non-autonomous integrable systems	244
7.8	Quantization of superintegrable systems	250

8.	Jacobi fields	257
8.1	The vertical extension of Lagrangian mechanics	257
8.2	The vertical extension of Hamiltonian mechanics	259
8.3	Jacobi fields of completely integrable systems	262
9.	Mechanics with time-dependent parameters	269
9.1	Lagrangian mechanics with parameters	270
9.2	Hamiltonian mechanics with parameters	272
9.3	Quantum mechanics with classical parameters	275
9.4	Berry geometric factor	282
9.5	Non-adiabatic holonomy operator	284
10.	Relativistic mechanics	293
10.1	Jets of submanifolds	293
10.2	Lagrangian relativistic mechanics	295
10.3	Relativistic geodesic equations	304
10.4	Hamiltonian relativistic mechanics	311
10.5	Geometric quantization of relativistic mechanics	312
11.	Appendices	317
11.1	Commutative algebra	317
11.2	Geometry of fibre bundles	322
11.2.1	Fibred manifolds	323
11.2.2	Fibre bundles	325
11.2.3	Vector bundles	328
11.2.4	Affine bundles	331
11.2.5	Vector fields	333
11.2.6	Multivector fields	335
11.2.7	Differential forms	336
11.2.8	Distributions and foliations	342
11.2.9	Differential geometry of Lie groups	344
11.3	Jet manifolds	346
11.3.1	First order jet manifolds	346
11.3.2	Second order jet manifolds	347
11.3.3	Higher order jet manifolds	349
11.3.4	Differential operators and differential equations	350
11.4	Connections on fibre bundles	351
11.4.1	Connections	352

11.4.2	Flat connections	354
11.4.3	Linear connections	355
11.4.4	Composite connections	357
11.5	Differential operators and connections on modules	359
11.6	Differential calculus over a commutative ring	363
11.7	Infinite-dimensional topological vector spaces	366
