

Summary of contents

Guided tour	xxxiv
Preface to the fourth edition	xxxvii
Acknowledgements	xxxix
1 Basic concepts: atoms	1
2 Basic concepts: molecules	31
3 Introduction to molecular symmetry	60
4 Experimental techniques	87
5 Bonding in polyatomic molecules	139
6 Structures and energetics of metallic and ionic solids	172
7 Acids, bases and ions in aqueous solution	207
8 Reduction and oxidation	242
9 Non-aqueous media	269
10 Hydrogen	299
11 Group 1: the alkali metals	326
12 The group 2 metals	348
13 The group 13 elements	371
14 The group 14 elements	426
15 The group 15 elements	485
16 The group 16 elements	546
17 The group 17 elements	591
18 The group 18 elements	624
19 <i>d</i>-Block metal chemistry: general considerations	639
20 <i>d</i>-Block metal chemistry: coordination complexes	665
21 <i>d</i>-Block metal chemistry: the first row metals	716
22 <i>d</i>-Block metal chemistry: the heavier metals	778
23 Organometallic compounds of <i>s</i>- and <i>p</i>-block elements	848
24 Organometallic compounds of <i>d</i>-block elements	887

25	Catalysis and some industrial processes	940
26	<i>d</i> -Block metal complexes: reaction mechanisms	976
27	The <i>f</i> -block metals: lanthanoids and actinoids	1002
28	Inorganic materials and nanotechnology	1033
29	The trace metals of life	1065
Appendices		1109
Answers to non-descriptive problems		1138
Index		1159

Contents

Guided tour	xxxiv
Preface to the fourth edition	xxxvii
Acknowledgements	xxxix
1 Basic concepts: atoms	1
1.1 Introduction	1
<i>Inorganic chemistry: it is not an isolated branch of chemistry</i>	1
The aims of Chapters 1 and 2	1
1.2 Fundamental particles of an atom	1
1.3 Atomic number, mass number and isotopes	2
Nuclides, atomic number and mass number	2
Relative atomic mass	2
Isotopes	2
1.4 Successes in early quantum theory	3
Some important successes of classical quantum theory	4
Bohr's theory of the atomic spectrum of hydrogen	5
1.5 An introduction to wave mechanics	6
The wave-nature of electrons	6
The uncertainty principle	6
The Schrödinger wave equation	7
1.6 Atomic orbitals	9
The quantum numbers n , l and m_l	9
The radial part of the wavefunction, $R(r)$	10
The radial distribution function, $4\pi r^2 R(r)^2$	11
The angular part of the wavefunction, $A(\theta, \phi)$	12
Orbital energies in a hydrogen-like species	15
Size of orbitals	15

The spin quantum number and the magnetic spin quantum number	15
The ground state of the hydrogen atom	17
1.7 Many-electron atoms	17
The helium atom: two electrons	17
Ground state electronic configurations: experimental data	18
Penetration and shielding	18
1.8 The periodic table	20
1.9 The <i>aufbau</i> principle	22
Ground state electronic configurations	22
Valence and core electrons	23
Diagrammatic representations of electronic configurations	24
1.10 Ionization energies and electron affinities	24
Ionization energies	24
Electron affinities	26
 2 Basic concepts: molecules	 31
2.1 Bonding models: an introduction	31
A historical overview	31
Lewis structures	31
2.2 Homonuclear diatomic molecules: valence bond (VB) theory	32
Uses of the term <i>homonuclear</i>	32
Covalent bond distance, covalent radius and van der Waals radius	32
The valence bond (VB) model of bonding in H ₂	33
The valence bond (VB) model applied to F ₂ , O ₂ and N ₂	34
2.3 Homonuclear diatomic molecules: molecular orbital (MO) theory	34
An overview of the MO model	34
Molecular orbital theory applied to the bonding in H ₂	35
The bonding in He ₂ , Li ₂ and Be ₂	37
The bonding in F ₂ and O ₂	38
What happens if the <i>s</i> – <i>p</i> separation is small?	40
2.4 The octet rule and isoelectronic species	41
The octet rule: first row <i>p</i> -block elements	41
Isoelectronic species	42
The octet rule: heavier <i>p</i> -block elements	43
2.5 Electronegativity values	43
Pauling electronegativity values, χ^{P}	43
Mulliken electronegativity values, χ^{M}	45
Allred–Rochow electronegativity values, χ^{AR}	45
Electronegativity: final remarks	45
2.6 Dipole moments	46
Polar diatomic molecules	46
Molecular dipole moments	47
2.7 MO theory: heteronuclear diatomic molecules	48
Which orbital interactions should be considered?	48

Hydrogen fluoride	49
Carbon monoxide	49
2.8 Molecular shape and the VSEPR model	51
Valence-shell electron-pair repulsion model	51
Structures derived from a trigonal bipyramid	54
Limitations of the VSEPR model	54
2.9 Molecular shape: stereoisomerism	55
Square planar species	55
Octahedral species	56
Trigonal bipyramidal species	56
High coordination numbers	56
Double bonds	56
 3 Introduction to molecular symmetry	 60
3.1 Introduction	60
3.2 Symmetry operations and symmetry elements	60
Rotation about an n -fold axis of symmetry	61
Reflection through a plane of symmetry (mirror plane)	61
Reflection through a centre of symmetry (inversion centre)	63
Rotation about an axis, followed by reflection through a plane perpendicular to this axis	63
Identity operator	63
3.3 Successive operations	65
3.4 Point groups	66
C_1 point group	66
$C_{\infty v}$ point group	66
$D_{\infty h}$ point group	66
T_d , O_h or I_h point groups	67
Determining the point group of a molecule or molecular ion	67
3.5 Character tables: an introduction	70
3.6 Why do we need to recognize symmetry elements?	71
3.7 Vibrational spectroscopy	72
How many vibrational modes are there for a given molecular species?	72
Selection rules for an infrared or Raman active mode of vibration	72
Linear ($D_{\infty h}$ or $C_{\infty v}$) and bent (C_{2v}) triatomic molecules	73
Bent molecules XY_2 : using the C_{2v} character table	74
XY_3 molecules with D_{3h} symmetry	76
XY_3 molecules with C_{3v} symmetry	77
XY_4 molecules with T_d or D_{4h} symmetry	78
XY_6 molecules with O_h symmetry	79
Metal carbonyl complexes, $M(CO)_n$	79
Metal carbonyl complexes $M(CO)_{6-n}X_n$	80
Observing IR spectroscopic absorptions	81
3.8 Chiral molecules	82

4	Experimental techniques	87
4.1	Introduction	87
4.2	Separation and purification techniques	87
	Gas chromatography (GC)	87
	Liquid chromatography (LC)	88
	High-performance liquid chromatography (HPLC)	88
	Recrystallization	90
4.3	Elemental analysis	90
	CHN analysis by combustion	90
	Atomic absorption spectroscopy (AAS)	90
4.4	Compositional analysis: thermogravimetry (TG)	92
4.5	Mass spectrometry	93
	Electron ionization (EI)	93
	Fast atom bombardment (FAB)	94
	Matrix-assisted laser desorption ionization time-of-flight (MALDI-TOF)	96
	Electrospray ionization (ESI)	97
4.6	Infrared and Raman spectroscopies	98
	Energies and wavenumbers of molecular vibrations	98
	The Fourier transform infrared (FT-IR) spectrometer and sample preparation	99
	Diagnostic absorptions	99
	Deuterium/hydrogen exchange	100
	Raman spectroscopy	102
4.7	Electronic spectroscopy	104
	UV-VIS absorption spectroscopy	104
	Types of absorption	104
	Absorbance and the Beer–Lambert Law	105
	Emission spectroscopy	106
4.8	Nuclear magnetic resonance (NMR) spectroscopy	106
	NMR active nuclei and isotope abundance	106
	Which nuclei are suitable for NMR spectroscopic studies?	107
	Resonance frequencies and chemical shifts	108
	Chemical shift ranges	108
	Solvents for solution studies	108
	Integration of signals and signal broadening	108
	Homonuclear spin–spin coupling: ^1H – ^1H	109
	Heteronuclear spin–spin coupling: ^{13}C – ^1H	110
	Case studies	111
	Stereochemically non-rigid species	113
	Exchange processes in solution	116
4.9	Electron paramagnetic resonance (EPR) spectroscopy	116
	What is EPR spectroscopy?	116
	The Zeeman electronic effect	117
	EPR spectra	117
4.10	Mössbauer spectroscopy	120
	The technique of Mössbauer spectroscopy	120
	What can isomer shift data tell us?	120

4.11	Structure determination: diffraction methods	121
	X-ray diffraction (XRD)	121
	Single crystal X-ray diffraction	122
	Powder X-ray diffraction	124
	Single crystal neutron diffraction	124
	Electron diffraction	125
	Low-energy electron diffraction (LEED)	125
	Structural databases	125
4.12	Photoelectron spectroscopy (PES, UPS, XPS, ESCA)	125
4.13	Computational methods	126
	Hartree–Fock theory	127
	Density functional theory	127
	Hückel MO theory	127
	Molecular mechanics (MM)	127
5	Bonding in polyatomic molecules	139
5.1	Introduction	139
5.2	Valence bond theory: hybridization of atomic orbitals	139
	What is orbital hybridization?	139
	sp Hybridization: a scheme for linear species	140
	sp^2 Hybridization: a scheme for trigonal planar species	141
	sp^3 Hybridization: a scheme for tetrahedral and related species	142
	Other hybridization schemes	143
5.3	Valence bond theory: multiple bonding in polyatomic molecules	144
	C_2H_4	144
	HCN	144
	BF_3	145
5.4	Molecular orbital theory: the ligand group orbital approach and application to triatomic molecules	146
	Molecular orbital diagrams: moving from a diatomic to polyatomic species	146
	MO approach to bonding in linear XH_2 : symmetry matching by inspection	146
	MO approach to bonding in linear XH_2 : working from molecular symmetry	148
	A bent triatomic: H_2O	148
5.5	Molecular orbital theory applied to the polyatomic molecules BH_3 , NH_3 and CH_4	151
	BH_3	151
	NH_3	152
	CH_4	154
	A comparison of the MO and VB bonding models	155
5.6	Molecular orbital theory: bonding analyses soon become complicated	156
5.7	Molecular orbital theory: learning to use the theory objectively	158
	π -Bonding in CO_2	158
	$[NO_3]^-$	159
	SF_6	159
	Three-centre two-electron interactions	162
	A more advanced problem: B_2H_6	164

6	Structures and energetics of metallic and ionic solids	172
6.1	Introduction	172
6.2	Packing of spheres	172
	Cubic and hexagonal close-packing	172
	The unit cell: hexagonal and cubic close-packing	173
	Interstitial holes: hexagonal and cubic close-packing	174
	Non-close-packing: simple cubic and body-centred cubic arrays	175
6.3	The packing-of-spheres model applied to the structures of elements	175
	Group 18 elements in the solid state	176
	H ₂ and F ₂ in the solid state	176
	Metallic elements in the solid state	176
6.4	Polymorphism in metals	177
	Polymorphism: phase changes in the solid state	177
	Phase diagrams	178
6.5	Metallic radii	178
6.6	Melting points and standard enthalpies of atomization of metals	179
6.7	Alloys and intermetallic compounds	179
	Substitutional alloys	180
	Interstitial alloys	180
	Intermetallic compounds	180
6.8	Bonding in metals and semiconductors	183
	Electrical conductivity and resistivity	183
	Band theory of metals and insulators	183
	The Fermi level	184
	Band theory of semiconductors	184
6.9	Semiconductors	185
	Intrinsic semiconductors	185
	Extrinsic (n- and p-type) semiconductors	185
6.10	Sizes of ions	185
	Ionic radii	187
	Periodic trends in ionic radii	187
6.11	Ionic lattices	188
	The rock salt (NaCl) structure type	189
	The caesium chloride (CsCl) structure type	190
	The fluorite (CaF ₂) structure type	190
	The antiferite structure type	191
	The zinc blende (ZnS) structure type: a diamond-type network	191
	The β-cristobalite (SiO ₂) structure type	192
	The wurtzite (ZnS) structure type	192
	The rutile (TiO ₂) structure type	192
	CdI ₂ and CdCl ₂ : layer structures	192
	The perovskite (CaTiO ₃) structure type: a double oxide	193
6.12	Crystal structures of semiconductors	193
6.13	Lattice energy: estimates from an electrostatic model	194
	Coulombic attraction within an isolated ion-pair	194

Coulombic interactions in an ionic lattice	194
Born forces	195
The Born–Landé equation	195
Madelung constants	195
Refinements to the Born–Landé equation	196
Overview	197
6.14 Lattice energy: the Born–Haber cycle	197
6.15 Lattice energy: ‘calculated’ versus ‘experimental’ values	198
6.16 Applications of lattice energies	198
Estimation of electron affinities	198
Fluoride affinities	199
Estimation of standard enthalpies of formation and disproportionation	199
The Kapustinskii equation	200
6.17 Defects in solid state lattices	200
Schottky defect	200
Frenkel defect	200
Experimental observation of Schottky and Frenkel defects	200
Non-stoichiometric compounds	201
Colour centres (F-centres)	201
Thermodynamic effects of crystal defects	202
 7 Acids, bases and ions in aqueous solution	 207
7.1 Introduction	207
7.2 Properties of water	207
Structure and hydrogen bonding	207
The self-ionization of water	209
Water as a Brønsted acid or base	209
7.3 Definitions and units in aqueous solution	210
Molarity and molality	210
Standard state	210
Activity	211
7.4 Some Brønsted acids and bases	211
Carboxylic acids: examples of mono-, di- and polybasic acids	211
Inorganic acids	213
Inorganic bases: hydroxides	214
Inorganic bases: nitrogen bases	214
7.5 The energetics of acid dissociation in aqueous solution	215
Hydrogen halides	215
H ₂ S, H ₂ Se and H ₂ Te	216
7.6 Trends within a series of oxoacids EO_n(OH)_m	216
7.7 Aquated cations: formation and acidic properties	217
Water as a Lewis base	217
Aquated cations as Brønsted acids	218

7.8 Amphoteric oxides and hydroxides	219
Amphoteric behaviour	219
Periodic trends in amphoteric properties	220
7.9 Solubilities of ionic salts	220
Solubility and saturated solutions	220
Sparingly soluble salts and solubility products	221
The energetics of the dissolution of an ionic salt: $\Delta_{\text{sol}}G^\circ$	222
The energetics of the dissolution of an ionic salt: hydration of ions	222
Solubilities: some concluding remarks	223
7.10 Common-ion effect	225
7.11 Coordination complexes: an introduction	225
Definitions and terminology	225
Investigating coordination complex formation	226
7.12 Stability constants of coordination complexes	227
Determination of stability constants	230
Trends in stepwise stability constants	230
Thermodynamic considerations of complex formation: an introduction	230
7.13 Factors affecting the stabilities of complexes containing only monodentate ligands	234
Ionic size and charge	234
Hard and soft metal centres and ligands	234
 8 Reduction and oxidation	 242
8.1 Introduction	242
Oxidation and reduction	242
Oxidation states	243
Stock nomenclature	243
8.2 Standard reduction potentials, E°, and relationships between E°, ΔG° and K	244
Half-cells and galvanic cells	244
Defining and using standard reduction potentials, E°	245
Dependence of reduction potentials on cell conditions	248
8.3 The effect of complex formation or precipitation on M^{z+}/M reduction potentials	252
Half-cells involving silver halides	252
Modifying the relative stabilities of different oxidation states of a metal	253
8.4 Disproportionation reactions	256
Disproportionation	256
Stabilizing species against disproportionation	257
8.5 Potential diagrams	257
8.6 Frost–Ebsworth diagrams	259
Frost–Ebsworth diagrams and their relationship to potential diagrams	259
Interpretation of Frost–Ebsworth diagrams	260

8.7	The relationships between standard reduction potentials and some other quantities	262
	Factors influencing the magnitudes of standard reduction potentials	262
	Values of $\Delta_f G^\circ$ for aqueous ions	263
8.8	Applications of redox reactions to the extraction of elements from their ores	264
	Ellingham diagrams	264
9	Non-aqueous media	269
9.1	Introduction	269
9.2	Relative permittivity	270
9.3	Energetics of ionic salt transfer from water to an organic solvent	271
9.4	Acid–base behaviour in non-aqueous solvents	272
	Strengths of acids and bases	272
	Levelling and differentiating effects	272
	‘Acids’ in acidic solvents	272
	Acids and bases: a solvent-oriented definition	273
	Proton-containing and aprotic solvents	273
9.5	Liquid sulfur dioxide	273
9.6	Liquid ammonia	274
	Physical properties	274
	Self-ionization	274
	Reactions in liquid NH_3	274
	Solutions of <i>s</i> -block metals in liquid NH_3	276
	Redox reactions in liquid NH_3	277
9.7	Liquid hydrogen fluoride	277
	Physical properties	277
	Acid–base behaviour in liquid HF	277
	Electrolysis in liquid HF	279
9.8	Sulfuric acid and fluorosulfonic acid	279
	Physical properties of sulfuric acid	279
	Acid–base behaviour in liquid H_2SO_4	279
	Physical properties of fluorosulfonic acid	280
9.9	Superacids	280
9.10	Bromine trifluoride	282
	Physical properties	282
	Behaviour of fluoride salts and molecular fluorides in BrF_3	282
	Reactions in BrF_3	282
9.11	Dinitrogen tetroxide	283
	Physical properties	283
	Reactions in N_2O_4	283
9.12	Ionic liquids	285

Molten salt solvent systems	285
Ionic liquids at ambient temperatures	285
9.13 Supercritical fluids	292
Properties of supercritical fluids and their uses as solvents	292
Supercritical fluids as media for inorganic chemistry	294
10 Hydrogen	299
10.1 Hydrogen: the simplest atom	299
10.2 The H^+ and H^- ions	299
The hydrogen ion (proton)	299
The hydride ion	300
10.3 Isotopes of hydrogen	300
Protium and deuterium	300
Kinetic isotope effects	301
Deuterated compounds	301
Tritium	303
10.4 Dihydrogen	303
Occurrence	303
Physical properties	303
Synthesis and uses	303
Reactivity	307
10.5 Polar and non-polar E–H bonds	308
10.6 Hydrogen bonding	309
The hydrogen bond	309
Trends in boiling points, melting points and enthalpies of vaporization for <i>p</i> -block binary hydrides	312
Infrared spectroscopy	313
Solid state structures	314
Hydrogen bonding in biological systems	316
10.7 Binary hydrides: classification and general properties	317
Classification	317
Metallic hydrides	317
Saline hydrides	319
Molecular hydrides and complexes derived from them	319
Covalent hydrides with extended structures	321
11 Group 1: the alkali metals	326
11.1 Introduction	326
11.2 Occurrence, extraction and uses	326
Occurrence	326
Extraction	327
Major uses of the alkali metals and their compounds	328
11.3 Physical properties	329
General properties	329
Atomic spectra and flame tests	329

Radioactive isotopes	331
NMR active nuclei	331
11.4 The metals	333
Appearance	333
Reactivity	333
11.5 Halides	334
11.6 Oxides and hydroxides	335
Oxides, peroxides, superoxides, suboxides and ozonides	335
Hydroxides	336
11.7 Salts of oxoacids: carbonates and hydrogencarbonates	338
11.8 Aqueous solution chemistry and macrocyclic complexes	339
Hydrated ions	339
Complex ions	340
11.9 Non-aqueous coordination chemistry	343
 12 The group 2 metals	 348
12.1 Introduction	348
12.2 Occurrence, extraction and uses	348
Occurrence	348
Extraction	349
Major uses of the group 2 metals and their compounds	349
12.3 Physical properties	351
General properties	351
Flame tests	351
Radioactive isotopes	351
12.4 The metals	352
Appearance	352
Reactivity	352
12.5 Halides	354
Beryllium halides	354
Halides of Mg, Ca, Sr and Ba	356
12.6 Oxides and hydroxides	359
Oxides and peroxides	359
Hydroxides	361
12.7 Salts of oxoacids	361
12.8 Complex ions in aqueous solution	362
Aqua species of beryllium	362
Aqua species of Mg^{2+} , Ca^{2+} , Sr^{2+} and Ba^{2+}	363
Complexes with ligands other than water	364
12.9 Complexes with amido or alkoxy ligands	364
12.10 Diagonal relationships between Li and Mg, and between Be and Al	366
Lithium and magnesium	366
Beryllium and aluminium	367

13	The group 13 elements	371
13.1	Introduction	371
13.2	Occurrence, extraction and uses	371
	Occurrence	371
	Extraction	371
	Major uses of the group 13 elements and their compounds	373
13.3	Physical properties	375
	Electronic configurations and oxidation states	375
	NMR active nuclei	378
13.4	The elements	378
	Appearance	378
	Structures of the elements	379
	Reactivity	379
13.5	Simple hydrides	380
	Neutral hydrides	380
	The $[\text{MH}_4]^-$ ions	385
13.6	Halides and complex halides	387
	Boron halides: BX_3 and B_2X_4	387
	Al(III), Ga(III), In(III) and Tl(III) halides and their complexes	390
	Lower oxidation state Al, Ga, In and Tl halides	393
13.7	Oxides, oxoacids, oxoanions and hydroxides	395
	Boron oxides, oxoacids and oxoanions	395
	Aluminium oxides, oxoacids, oxoanions and hydroxides	397
	Oxides of Ga, In and Tl	399
13.8	Compounds containing nitrogen	400
	Nitrides	400
	Ternary boron nitrides	402
	Molecular species containing B–N or B–P bonds	403
	Molecular species containing group 13 metal–nitrogen bonds	406
13.9	Aluminium to thallium: salts of oxoacids, aqueous solution chemistry and complexes	407
	Aluminium sulfate and alums	407
	Aqua ions	407
	Redox reactions in aqueous solution	407
	Coordination complexes of the M^{3+} ions	408
13.10	Metal borides	409
13.11	Electron-deficient borane and carbaborane clusters: an introduction	411
14	The group 14 elements	426
14.1	Introduction	426
14.2	Occurrence, extraction and uses	426
	Occurrence	426
	Extraction and manufacture	427
	Uses	427

14.3	Physical properties	431
	Ionization energies and cation formation	431
	Some energetic and bonding considerations	433
	NMR active nuclei	435
	Mössbauer spectroscopy	435
14.4	Allotropes of carbon	435
	Graphite and diamond: structure and properties	435
	Graphite: intercalation compounds	437
	Fullerenes: synthesis and structure	438
	Fullerenes: reactivity	439
	Carbon nanotubes	444
14.5	Structural and chemical properties of silicon, germanium, tin and lead	444
	Structures	444
	Chemical properties	444
14.6	Hydrides	445
	Binary hydrides	446
	Halohydrides of silicon and germanium	448
14.7	Carbides, silicides, germides, stannides and plumbides	449
	Carbides	449
	Silicides	450
	Zintl ions containing Si, Ge, Sn and Pb	450
14.8	Halides and complex halides	454
	Carbon halides	454
	Silicon halides	456
	Halides of germanium, tin and lead	457
14.9	Oxides, oxoacids and hydroxides	460
	Oxides and oxoacids of carbon	460
	Silica, silicates and aluminosilicates	463
	Oxides, hydroxides and oxoacids of germanium, tin and lead	471
14.10	Siloxanes and polysiloxanes (silicones)	473
14.11	Sulfides	474
14.12	Cyanogen, silicon nitride and tin nitride	477
	Cyanogen and its derivatives	477
	Silicon nitride	479
	Tin(IV) nitride	479
14.13	Aqueous solution chemistry and salts of oxoacids of germanium, tin and lead	479
15	The group 15 elements	485
15.1	Introduction	485
15.2	Occurrence, extraction and uses	486
	Occurrence	486
	Extraction	486
	Uses	488

15.3	Physical properties	490
	Bonding considerations	491

28.8	Graphene	1056
28.9	Carbon nanotubes	1058

29 The trace metals of life	1065
29.1 Introduction	1065
Amino acids, peptides and proteins: some terminology	1067
29.2 Metal storage and transport: Fe, Cu, Zn and V	1070
Iron storage and transport	1070
Metallothioneins: transporting some toxic metals	1075
29.3 Dealing with O ₂	1076
Haemoglobin and myoglobin	1076
Haemocyanin	1079
Haemerythrin	1081
Cytochromes P-450	1083
29.4 Biological redox processes	1084
Blue copper proteins	1084
The mitochondrial electron-transfer chain	1085
Iron-sulfur proteins	1087
Cytochromes	1094
29.5 The Zn ²⁺ ion: Nature's Lewis acid	1097
Carbonic anhydrase II	1097
Carboxypeptidase A	1099
Carboxypeptidase G2	1102
Cobalt-for-zinc ion substitution	1102
Appendices	1109
1 Greek letters with pronunciations	1110
2 Abbreviations and symbols for quantities and units	1111
3 Selected character tables	1117
4 The electromagnetic spectrum	1121
5 Naturally occurring isotopes and their abundances	1123
6 Van der Waals, metallic, covalent and ionic radii	1126
7 Pauling electronegativity values (χ^P) for selected elements of the periodic table	1128
8 Ground state electronic configurations of the elements and ionization energies	1129
9 Electron affinities	1132
10 Standard enthalpies of atomization ($\Delta_a H^\circ$) of the elements at 298 K	1133
11 Selected standard reduction potentials (298 K)	1134
12 Selected bond enthalpy terms	1137
Answers to non-descriptive problems	1138
Index	1159
