Preface	ix
1 The role of activities and investigations in science education	1
2 Life and living processes	3
2.2.1 Living and non-living things	4
2.2.2 Finding out if things are alive	5
2.2.3 Dormant organisms: living or not?	6
3 Humans as organisms	8
3.1.1 Finding body landmarks	8
3.1.2 Relating body landmarks to internal organs	9
3.2.1 Dental plaque and the effect of brushing	12
3.3.1 What happens as food is chewed	13
3.3.2 Where does food go when it is swallowed?	14
(3.4 Nutrition, food and diet)	14
3.5.1 The skeleton: support and protection	15
3.5.2 The skeleton and movement: joints	16
3.5.3 Finding tendons	17
3.5.4 Muscles and their action	19
3.6.1 Modelling the chest and breathing	21
3.6.2 Movement of the diaphragm and ribs in breathing	22
3.6.3 Respiration and body temperature	23
3.7 and 3.8 Blood and its circulation	24
3.8.1 Listening to the action of the heart	25
3.8.2 Circulation of the blood: arteries	26
3.8.3 The pulse and how to find it	27
3.8.4 Circulation of the blood: veins	28
3.8.5 Circulation of the blood: capillaries	28
3.9.1 Exercise and the action of the heart	29
3.9.2 Exercise and breathing	31
3.9.3 Exercise, skin and body temperature	31
3.10.1 Responding to changing light levels	33
3.10.2 How much do we see clearly?	33

3.10.3	Judging distances	34
3.10.4	Using an ear-trumpet to direct sound-waves	35
3.10.5	Hearing: judging direction	35
3.10.6	Detecting tastes and flavours	36
3.10.7	Detecting changes in temperature	37
3.10.8	Sensitivity to touch	38
4	Green plants as organisms	40
4.1.1	Measuring stem and leaf growth	42
4.2.1	Shoot systems	43
4.2.2	Root systems	46
4.2.3	Flowers	47
4.3.1	Patterns of plant growth	50
4.3.2	Observing germination	51
4.3.3	Investigating conditions needed for germination	52
4.3.4	The effects of environmental conditions on plant growth	53
4.3.5	Plants and water	55
4.3.6	Response of shoots to light	56
4.3.7	Response of shoots to gravity	58
4.3.8	Response of roots to gravity	59
4.4.1	Plants as food-makers	60
4.4.2	Plant products as energy stores	61
4.5.1	Asexual reproduction	63
4.5.2	Sexual reproduction in plants: gaining an overview	64
4.5.3	Pollination	64
4.5.4	Development of fruits and seeds	65
4.5.5	Seed dispersal	66
5	Variety, adaptation and interdependence	68
(5.1	Observing a variety of animals)	68
(5.2	Observing a variety of plants)	70
(5.3	Observing a variety of other living things)	71
5.3.1	Observing food-decaying microbes	72
(5.4	Classification using keys)	73
(5.5	Adaptation)	76
5.6.1	Adaptations of the skulls of mammals	77
5.6.2	Adaptations of fruits and seeds to wind dispersal	79
5.6.3	Adaptation and environment	82
5.7.1	Developing the concept of a food-chain	83
5.7.2	Food-chains and food-webs within a habitat	86
5.8.1	Observing the breakdown of leaves	88
5.9.1	Observing the effects of air pollution	90
5.9.2	Litter	91
6	States of matter and physical change	92
6.1.1	Distinguishing solids from liquids	92
6.1.2	Solids which 'flow'	94
6.1.3	Gases and their properties	95

6.2.1	Observing melting and freezing	96
6.2.2	Solid or liquid?	98
6.2.3	Freezing and melting of water	99
6.3.1	Boiling of water	101
6.3.2	Condensation	103
6.3.3	Evaporation	104
6.3.4	The cooling effect of evaporation	106
6.4.1	Separating particulate mixtures by particle size	108
6.4.2	Separating mixtures by dissolving and filtering	109
6.4.3	Separating mixtures using other properties	111
6.5.1	Distinguishing solutions and suspensions	111
6.5.2	Solutions and their separation	112
6.5.3	Solutions of gases	114
6.6.1	Investigating absorbency	115
6.6.2	Chromatography	117
6.6.3	Waterproofing	118
7	Mechanical properties of materials and objects	120
(7.1	Forces, materials and objects)	120
7.2.1	Investigating compressibility	121
7.3.1	Comparing and estimating hardness	122
7.4.1	Applying forces in different ways	123
7.5.1	Experiencing stiffness and flexibility	126
7.5.2	Stiffness and shape	127
7.6.1	Observing elasticity and plasticity	128
7.7.1	Measuring and comparing strength	130
7.7.2	Tearing strength of paper	133
7.8.1	Observing brittleness and toughness	134
(7.9	Linking the properties of materials to their uses)	134
8	Explaining physical changes	136
8.2.1	Modelling a solid	137
8.2.2	Modelling a liquid	137
8.5.1	A closer look at materials in tension and bending	139
(8.6	Crystals)	140
9	Chemical changes	141
9.1.1	Introducing the idea of chemical change	141
9.2.1	Cooking egg-white	142
9.2.2	Investigating sponge-cakes	144
9.2.3	Investigating bread	145
9.2.4	Food and microbes	146
(9.3	Reactions with oxygen)	147
9.4.1	Observing the burning of a candle	147
9.5.1	Investigating the conditions under which rusting occurs	150
10	Obtaining and making materials	152
10.1.1	Sorting natural and man-made materials and objects	152

10.1.2	Investigating the origins of materials	153
(10.2	Investigating how materials are obtained and used)	154
11	Earth science	156
(11.1	The place of Earth science in the curriculum)	156
11.2.1	Measuring air temperature	156
11.2.2	Making and using temperature records	157
11.3.1	Observing the effects of wind	158
11.3.2	Measuring wind direction	158
11.3.3	Measuring wind speed	160
(11.4	Water in the atmosphere)	161
11.5.1	Observing and measuring precipitation	162
11.5.2	Modelling the water cycle	163
(11.6	Patterns of weather)	164
(11.7	Rocks and their formation)	164
(11.8	The weathering of rocks)	165
(11.9	Weathering and soil formation)	165
11.10.1	Comparing soil textures	165
11.10.2	Simple soil analysis	166
12	Energy	168
(12.1	Energy and change)	168
(12.2	Forms of energy)	169
12.3.1	Thermal expansion and contraction of air	171
12.3.2	Temperature and thermometers	173
12.3.3	Heating by conduction	174
12.3.4	Heating by convection	175
12.3.5	Heating by radiation	175
12.3.6	Thermal insulation	176
13	Electricity	178
13.1.1	Investigating simple circuits	180
13.1.2	Finding out more about simple circuits	180
13.2.1	Identifying electrical conductors	182
13.3.1	Changing the current in a circuit	183
13.7.1	Observing the heating effect of electric current	185
(13.8	Cause and effect in changing current)	185
13.9.1	The effect of adding components to a series circuit	186
13.9.2	A puzzling circuit	187
13.10.1	Investigating parallel circuits	188
14	Forces and their effects	191
14.1.1	Forces and movement in physical education	192
14.1.2	Forces and change in art	192
14.1.3	Experiencing and measuring forces	193
14.1.4	Experiencing pulling and pushing actions	195
14.2.1	Investigating changes of movement	200
14.2.2	Forces out of balance: changes of direction	200

14.2.3	Forces out of balance: changes of shape	201
14.3.1	Static and limiting friction	202
14.3.2	Friction and walking	203
14.3.3	Sliding and rolling friction	204
14.3.4	Solid-air friction and parachutes	204
14.4.1	Simple levers: removing a can-lid	206
14.4.2	More simple machines	207
14.4.3	The bicycle: a more complex machine	207
14.5.1	Beam balances	208
14.5.2	Experiencing forces in balance	209
14.5.3	Forces in balance: object stationary	210
14.5.4	Forces in balance: object moving	210
14.6.1	Floating as arrested fall	211
14.6.2	Displacement and upthrust	212
14.6.3	Floating and sinking	212
14.6.4	Making a 'sinker' float	213
15	Gravity and magnetism	214
15.1.1	Action-at-a-distance by a magnet	214
15.1.2	Action-at-a-distance by gravity	215
15.2.1	Simple investigations with falling objects	216
15.2.2	Changes of direction in falling	217
15.2.3	Investigating pendulums	218
15.3.1	Sorting magnetic and non-magnetic materials	220
15.3.2	Observing magnetic fields	220
15.3.3	Barriers to magnetic fields	221
15.4.1	Magnetic poles and north-south polarity	222
15.4.2	Attraction and repulsion of magnets	223
15.4.3	Testing for magnetism	224
15.4.4	Comparing the 'strength' of magnets	225
15.5.1	The magnetic field-compass	227
15.6.1	Magnetic attraction and temporary magnets	227
15.6.2	Making small permanent magnets by induction	229
15.6.3	Testing 'weak' magnets	230
(15.7	Non-metallic magnets)	230
16	Sound	232
16.1.1	Investigating vibration and sound	232
16.1.2	Transmission of sound	234
16.2.1	Pitch and frequency	236
16.2.2	Controlling pitch in strings	237
16.2.3	Variable sounds made by blowing	238
16.2.4	Loudness and energy	238
(16.3	Musical instruments)	239
16.4.1	Observing sound insulation in the classroom	240
16.4.2	Comparing materials as sound insulators	240

17	Light	242
17.1.1	Finding out about children's theories of vision	242
17.1.2	Theories of vision: darkness and light	243
17.1.3	The dark-box and the movement of light	244
17.2.1	Finding sources of light	245
17.2.2	Transmission of light through different materials	245
17.3.1	Making a pin-hole viewer	247
17.4.1	Shadow formation using a point source of light	248
17.4.2	Shadow formation using an extended source of light	249
17.4.3	Shadows in sunlight	250
(17.5	Absorption of light)	252
17.6.1	Refraction between water and air: illusions	252
17.6.2	Refraction between glass and air: lenses	254
17.7.1	How a mirror changes the path of light	256
17.7.2	Seeing round corners	257
17.7.3	Reflection in mirrors: images	258
17.8.1	Dispersion and the spectrum	259
17.8.2	Colour mixing: paints and dyes	261
17.8.3	Mixing coloured lights	262
17.8.4	Coloured lights and coloured objects	263
18	The Earth in space	265
18.1.1	Modelling the Solar System	265
18.2.1	Modelling the Earth in orbit	266
18.2.2	Modelling day and night	267
18.2.3	Patterns of sun-shadows	269
18.3.1	Modelling phases of the Moon	271
18.4.1	Modelling energy input to the Earth	272
	Index	275
