To My Readers v

Prologue 1

1	Sequences and Patterns	3
1.1	Beneath a Cherry Tree	3
1.2	Outlier	6
1.3	Beginning the Pattern	8
2	Equations and Love Letters	11
2.1	Two Plus One Equals Three	11
2.2	Some Mental Arithmetic	12
2.3	The Letter	12
2.4	Ambush	13
2.5	Tetra	14
2.5.1	Defining Prime Numbers	15
2.5.2	Defining Absolute Values	18
2.6	Beneath an Umbrella	20
2.7	Burning the Midnight Oil	21
2.8	Miruka's Answer	24
2.9	Math by the Letters	26
2.9.1	Equations and Identities	26
2.9.2	The Forms of Sums and Products	30
2.10	Who's Behind the Math?	33

3	Shapes in the Shadows	35
3.1	Rotations	35
3.2	Projections	37
3.3	The Omega Waltz	43
4	Generating Functions	49
4.1	In the Library	49
4.1.1	Searching for Patterns	50
4.1.2	Sums of Geometric Progressions	51
4.1.3	Infinite Geometric Series	52
4.1.4	Creating Generating Functions	53
4.2	Capturing the Fibonacci Sequence	54
4.2.1	The Fibonacci Sequence	54
4.2.2	A Generating Function	56
4.2.3	Searching for a Closed Expression	57
4.2.4	On to the Infinite Series	59
4.2.5	The Solution	60
4.3	Reflections	64
5	Arithmetic and Geometric Means	67
5.1	The Second Note	67
5.2	Questions	68
5.3	Inequalities	70
5.4	Forging Ahead	77
5.5	A Glimpse Behind the Curtain	80
6	The Discrete World	85
6.1	Derivatives	85
6.2	Differences	89
6.3	Bringing Them Together	91
6.3.1	Linear Functions	91
6.3.2	Quadratic Functions	92
6.3.3	Cubic Functions	94
6.3.4	Exponential Functions	95
6.4	Traveling Between Two Worlds	97
7	Generalizations	101
7.1	Back in the Library	101

7.1.1	With Miruka	101
7.1.2	With Tetra	104
7.1.3	Recurrence	105
7.2	Heading Home	108
7.3	The Binomial Theorem	109
7.4	Convolution	116
7.5	Miruka's Solution	122
7.5.1	A Different Approach	122
7.5.2	Confronting Generating Functions	127
7.5.3	The Scarf	130
7.5.4	The Final Hurdle	130
7.5.5	The Leap	133
7.5.6	A Circle with Zero Radius	137
8	Harmonic Numbers	139
8.1	Treasure Hunt	139
8.1.1	Tetra	139
8.1.2	Miruka	140
8.2	For Every Library There Exists a Dialogue...	141
8.2.1	Partial Sums and Infinite Series	141
8.2.2	Starting with the Obvious	144
8.2.3	Propositions	145
8.2.4	For All...	148
8.2.5	There Exists...	150
8.3	An Infinite Upward Spiral	153
8.4	An Ill-Tempered Zeta	155
8.5	Overestimating Infinity	156
8.6	Harmony in the Classroom	162
8.7	Two Worlds, Four Operators	165
8.8	Keys to the Known, Doors to the Unknown	172
8.9	If There Were Only Two Primes	173
8.9.1	Converging Geometric Progressions	175
8.9.2	The Uniqueness of Prime Factorizations	176
8.9.3	The Infinitude of Primes	176
8.10	Under the Stars	180
9	Taylor Series and the Basel Problem	185

9.1	Two Cards	185
9.1.1	One for Tetra	185
9.1.2	Polynomials of Infinite Degree	187
9.2	Learning on Your Own	190
9.3	Getting Closer	191
9.3.1	Differentiation Rules	191
9.3.2	Looping Derivatives	193
9.3.3	The Taylor Series for $\sin x$	196
9.3.4	Taking Equations to the Limit	200
9.4	The Problem Within	202
9.5	The Fundamental Theorem of Algebra	205
9.6	Tetra's Attempt	210
9.6.1	Trial and Error	210
9.6.2	A Solution Emerges	212
9.6.3	Defying Infinity	217
10	Partitions	221
10.1	Partition Numbers	221
10.1.1	Ways to Pay	221
10.1.2	Some Concrete Examples	222
10.2	The Fibonacci Sign	228
10.3	Confessions	230
10.4	Making Selections	232
10.5	Three Solutions	235
10.5.1	Using Generating Functions	236
10.5.2	Using an Upper Limit	243
10.5.3	Using Brute Force	248
10.6	Lost and Found	251
10.7	In Search of a Better Upper Bound	252
10.7.1	Starting with Generating Functions	252
10.7.2	Changing Sums into products	254
10.7.3	Taylor Series	255
10.7.4	Harmonic Numbers	259
10.7.5	Coming Home	261
10.7.6	Tetra's Notes	263
10.8	Goodbyes	264
	Recommended Reading	273
