CONTENTS

1. Introduction 3
   Genesis of the work. Overview.

   PART ONE: Before Miletus

2. A Brief History of Coping 11
   Evolution of life forms from one-celled to human, based on the
   relation of coping to their environments.

3. Language 30
   Speculative account of language origin, and the vast differences
   language makes in belief-based behavior.

4. High and Low Beliefs 37
   Presentation of this central distinction of the work—roughly,
   unverified/verified.

5. The “Will to Believe” 45
   Faith and confidence: to what extent beliefs are subject to
   the will.

6. Eden 49
   Beliefs in hunter-gatherer bands, the “natural” human environment.
   Low beliefs true, high beliefs false but edifying. An “invisible
   membrane” protecting high from low.

7. Babylon 59
   How in “unnaturally” large social units arising after invention of
   agriculture, high beliefs became institutionalized and provided
   social glue.
PART TWO: Miletus To Alexandria

8. Miletus: The Invention of Science 65

9. Anaximander and Anaximenes 75
Consolidation and improvement of Thales’ Grand Theory by his Milesian successors. Ideas of evolution and of dialectic.

10. Science and Philosophy Come to Italy 81
The Grand Theories of Xenophanes, Pythagoras, Heraclitus, Parmenides, and Empedocles. How they did, and did not, conform to the Milesian requirements.

11. Athens I 95

12. Atomism 99
High point of ancient science. Democritus’s breakthrough: “subjective” nature of colors, and so on. Elimination of teleology from explanation. Epicurus and Lucretius.

13. Athens II: Plato 104
A great philosopher but thoroughly antiscientific. Naive theory of meaning (words as names) sole basis of his Grand Theory.

Extraordinary achievements of this man—after Thales, the greatest scientist of all time. Explained nature of scientific explanation as proof of necessity, the “couldn’t be otherwise.” But reintroduced teleology.

15. Alexandria 121
Much science but little philosophy. Skepticism: rejection of all high beliefs.

16. Beliefs About Believers 124
Greek theories of mind or “soul.” Nearness of Aristotle’s view—soul the Form of the body—to modern functionalism.
PART THREE: The Legacy Of Christianity

17. Jerusalem Collides with Athens  133
Christianity, imposed by force on the ancient world, had a Grand Theory based on a notion entirely foreign to Greek thought, that of the Omnipotent Creator/Legislator (OCL). He could do anything imaginable and was constrained by nothing. So there was no longer anything that “could not be otherwise.” Therefore, science in the sense of proving necessity was impossible; it could at most only investigate “second causes,” what the OCL had hitherto allowed; and this included miracles. Aquinas softened this doctrine somewhat by dividing knowledge between Revelation (the soul and its fate) and Reason (everything else), but the compromise was breaking down at the beginning of the seventeenth century.

18. Cartesianism  144
Descartes’s attempt to shore up the Aquinian compromise and the Real Distinction between soul and body by intellectual jujitsu involving the hypothetical Evil Demon: a skeptical ploy going beyond Pyrrhonism to cast doubt on all beliefs, low as well as high. The Evil Demon’s relation to the OCL. Reasons not to be scared by the Evil Demon, his persistence in philosophy notwithstanding.

19. Miletus Preserved I: Hobbes  151
Hobbes’s banishment of theology from philosophy and his reassertion of the Milesian requirements.

20. Institutions  154
Digression à la Hobbes on institutional facts, that is, beliefs dependent on the existence of conventions. Rights. Sketch of a consent theory of the State not dependent on an assumption of equality among the consenters.

21. Miletus Preserved II: Spinoza  165
The Grand Theory in which God = Nature; ultimate reassertion of the Milesian requirements.

22. The Strange Case of David Hume  170
Impossibility of maintaining the sovereignty of Reason on Cartesian and Lockian assumptions. The “Problem of Induction”: its disappearance on rejection of the medieval doctrine of “logical possibility.”
23. Ethics Without Edification 177
   Bearing of the theory of high and low beliefs on ethics. Investigation of whether in fact a viable morality might exist without propping up by high beliefs.

24. L'Envoi 197
   Overview of conclusions reached in this book.

25. Conclusion? 204
   Reflections on whether the Milesian insight was a good idea for animals like us to have had, all things considered and sub specie aeternitatis.
