PART I

SINGLE-PRODUCT INDUSTRIES AND CIRCULATING CAPITAL

I	PRODUCTION FOR SUBSISTENCE	<i>page 3</i>
1	Two products	
2	Three or more	
3	General case	
II	PRODUCTION WITH A SURPLUS	6
4	The rate of profits	
5	Example of rate of profits	
6	Basic and non-basic products	
7	Terminological note	
8	Subsistence-wage and surplus-wage	
9	Wages paid out of the product	
10	Quantity and quality of labour	
11	Equations of production	
12	The national income in a self-replacing system	
III	PROPORTIONS OF LABOUR TO MEANS OF PRODUCTION	12
13	Wages as a proportion of the national income	
14	Values when the whole national income goes to wages	
15	Variety in the proportions of labour to means of production	
16	'Deficit-industries' and 'surplus-industries'	
17	A watershed proportion	
18	Price-changes to redress balance	
19	Price-ratios of product to means of production	
20	Price-ratios between products	
21	A recurrent proportion	
22	Balancing ratio and Maximum rate of profits	
IV	THE STANDARD COMMODITY	18
23	'An invariable measure of value'	
24	The perfect composite commodity	
25	Construction of such a commodity: example	
26	Standard commodity defined	
27	Equal percentage excess	
28	Standard ratio (R) of net product to means of production	

CONTENTS

	29 Standard ratio and rates of profits	
	30 Relation between wage and rate of profits in the Standard system	
	31 Relation extended to any system	
	32 Example	
	33 Construction of the Standard commodity: the <i>q</i> -system	
	34 The Standard national income as unit	
	35 Non-basics excluded	
V	UNIQUENESS OF THE STANDARD SYSTEM	page 26
	36 Introductory	
	37 Transformation into a Standard system always possible	
	38 Why the question of uniqueness arises	
	39 Prices positive at all wage levels	
	40 Production equations with zero wages	
	41 Unique set of positive multipliers	
	42 Positive multipliers correspond to <i>lowest</i> value of <i>R</i>	
	43 Standard product replaced by equivalent quantity of labour	
	44 Wage or rate of profits as independent variable	
VI	REDUCTION TO DATED QUANTITIES OF LABOUR	34
	45 Cost of production aspect	
	46 'Reduction' defined	
	47 Pattern of the movement of individual terms with changes in distribution	
	48 Movement of an aggregate of terms	
	49 Rate of fall of prices cannot exceed rate of fall of wages	
<h2 style="margin: 0;">PART II</h2> <h1 style="margin: 0;">MULTIPLE-PRODUCT INDUSTRIES AND FIXED CAPITAL</h1>		
VII	JOINT PRODUCTION	43
	50 Two methods of production for two joint products; or, one method for producing them and two methods for using them in the production of a third commodity	
	51 A system of universal joint products	
	52 Complications in constructing the Standard system	
VIII	THE STANDARD SYSTEM WITH JOINT PRODUCTS	47
	53 Negative multipliers: I. Proportions of production incompatible with proportions of use	
	54 — II. Basic and non-basic jointly produced	
	55 — III. Special raw material	

CONTENTS

56	Interpretation of negative components of the Standard commodity	
57	Basics and non-basics, new definition required	
58	Three types of non-basics	
59	Example of the third type	
60	General definition	
61	Elimination of non-basics	
62	The system of Basic equations	
63	Construction of the Standard system	
64	Only the lowest value of R economically significant	
65	Tax on non-basic product leaves rate of profits and prices of other products unaffected	
IX	OTHER EFFECTS OF JOINT PRODUCTION	page 56
66	Quantity of labour embodied in two commodities jointly produced by two processes	
67	Quantity of labour embodied in two commodities jointly produced by only one process	
68	Reduction to dated quantities of labour not generally possible	
69	No certainty that all prices will remain positive as the wage varies	
70	Negative quantities of labour	
71	Rate of fall of prices no longer limited by rate of fall of wages	
72	Implication of this	
X	FIXED CAPITAL	63
73	Fixed capital as a kind of joint product	
74	Machines of different ages regarded as different products	
75	Annual charge on a durable instrument calculated by the annuity method	
76	The same calculated by the joint-production equations method	
77	The equations method more general	
78	Different depreciation of similar instruments in different uses	
79	Reduction to dated quantities of labour generally impossible with fixed capital	
80	How book-value of machine varies with age if $r = 0$	
81	Quantity of labour 'contained' in a partly used-up machine	
82	How book-value varies with age if $r > 0$	
83	Variation of book-value of complete set of machines of all ages with variation of r	
84	Fixed capital in the Standard system	
XI	LAND	74
85	Similarity of rent-earning natural resources with non-basic products	
86	Differential rent	
87	Rent on land of a single quality	

CONTENTS

- 88 Relation of rent to 'extensive' and 'intensive' diminishing returns
- 89 Multiplicity of agricultural products
- 90 The distinction between 'single-products system' and 'multiple-products system', revised
- 91 Quasi-rents

PART III

XII SWITCH IN METHODS OF PRODUCTION *page 81*

- 92 Simple case, non-basic products
- 93 Basic products: both method and system switched
- 94 Condition for a rise in the rate of profits invariably leading to a switch to a higher Standard ratio
- 95 Throughout a series of switches from system to system (provided they are single-products systems) to a higher rate of profits corresponds a fall in the wage
- 96 Switch of methods in multiple-products systems

APPENDICES

- A ON 'SUB-SYSTEMS' 89
- B NOTE ON SELF-REPRODUCING NON-BASICS 90
- C THE DEVICE OF A 'BASIC SYSTEM' 92
- D REFERENCES TO THE LITERATURE 93
 - 1 Production as a circular process in the Physiocrats and Ricardo
 - 2 Standard measure of value and 'labour commanded'
 - 3 The Maximum rate of profits
 - 4 Residual fixed capital as a joint product

- Index* 97
