Preface	xi
A remark on notation	xi
Acknowledgments	xii
Chapter 1. Logic and foundations	1
§1.1. Material implication	1
§1.2. Errors in mathematical proofs	2
§1.3. Mathematical strength	4
§1.4. Stable implications	6
§1.5. Notational conventions	8
§1.6. Abstraction	9
§1.7. Circular arguments	11
§1.8. The classical number systems	12
§1.9. Round numbers	15
§1.10. The “no-self-defeating object” argument, revisited	16
§1.11. The “no-self-defeating object” argument, and the vagueness paradox	28
§1.12. A computational perspective on set theory	35
Chapter 2. Group theory	51
§2.1. Torsors	51
§2.2. Active and passive transformations	54
§2.3. Cayley graphs and the geometry of groups	56
§2.4. Group extensions	62

§2.5. A proof of Gromov's theorem	69
Chapter 3. Analysis	79
§3.1. Orders of magnitude, and tropical geometry	79
§3.2. Descriptive set theory vs. Lebesgue set theory	81
§3.3. Complex analysis vs. real analysis	82
§3.4. Sharp inequalities	85
§3.5. Implied constants and asymptotic notation	87
§3.6. Brownian snowflakes	88
§3.7. The Euler-Maclaurin formula, Bernoulli numbers, the zeta function, and real-variable analytic continuation	88
§3.8. Finitary consequences of the invariant subspace problem	104
§3.9. The Guth-Katz result on the Erdős distance problem	110
§3.10. The Bourgain-Guth method for proving restriction theorems	123
Chapter 4. Non-Standard analysis	133
§4.1. Real numbers, non-standard real numbers, and finite precision arithmetic	133
§4.2. Non-Standard analysis as algebraic analysis	136
§4.3. Compactness and contradiction: the correspondence principle in ergodic theory	137
§4.4. Non-Standard analysis as a completion of standard analysis	150
§4.5. Concentration compactness via non-standard analysis	168
Chapter 5. Partial differential equations	181
§5.1. Quasilinear well-posedness	181
§5.2. A type diagram for function spaces	189
§5.3. Amplitude-frequency dynamics for semilinear dispersive equations	194
§5.4. The Euler-Arnold equation	203
Chapter 6. Miscellaneous	217
§6.1. Multiplicity of perspective	217
§6.2. Memorisation vs. derivation	220
§6.3. Coordinates	222
§6.4. Spatial scales	227
§6.5. Averaging	228
§6.6. What colour is the sun?	231

§6.7. Zeno's paradoxes and induction	232
§6.8. Jevons' paradox	233
§6.9. Bayesian probability	236
§6.10. Best, worst, and average-case analysis	242
§6.11. Duality	244
§6.12. Open and closed conditions	246
Bibliography	249
Index	255
