<i>Dedication</i>	vii
<i>Foreword</i>	ix
<i>Opinions on the Book</i>	xi
<i>About the Author</i>	xiii
<i>Preface</i>	xv
<i>Acronyms</i>	xxvii
<i>Symbols and Notations</i>	xxix
1. Introduction and Overview	1
1.1 Game Theory: The Science of Strategic Interactions	1
1.2 Current Trends and Modern Applications	8
1.3 Outline of this Book	14
NON-COOPERATIVE GAME THEORY	17
2. Key Notions in Game Theory	19
2.1 Strategic Form Games	19
2.2 Preferences	20
2.3 Utilities	21
2.4 Rationality	21
2.5 Intelligence	23
2.6 Classification of Games	26
2.7 Summary and References	27
3. Extensive Form Games	31
3.1 Illustrative Examples	31

3.2	Extensive Form Games: Definitions	34
3.3	Transforming Extensive Form to Strategic Form	37
3.4	Summary and References	40
3.5	Exercises	41
4.	Strategic Form Games	43
4.1	Preliminaries	43
4.2	Matching Pennies with Simultaneous Moves	44
4.3	Rock-Paper-Scissors Game	45
4.4	BOS (Bach or Stravinsky) Game	46
4.5	A Coordination Game	47
4.6	Prisoner's Dilemma Game	47
4.7	Company's Dilemma Game	48
4.8	A Non-Symmetric Company's Dilemma Game	49
4.9	A Duopoly Pricing Game	49
4.10	Tragedy of the Commons	50
4.11	Bandwidth Sharing Game	51
4.12	A Sealed Bid Auction	51
4.13	Pigou's Network Game	52
4.14	Braess Paradox Game	53
4.15	Summary and References	55
4.16	Exercises	57
5.	Dominant Strategy Equilibria	59
5.1	Strong Dominance	59
5.2	Weak Dominance	60
5.3	Very Weak Dominance	61
5.4	Illustrations of Dominant Strategy Equilibria	62
5.5	Summary and References	65
5.6	Exercises	65
6.	Pure Strategy Nash Equilibria	67
6.1	The Notion of Nash Equilibrium	67
6.2	Illustrative Examples of Pure Strategy Nash Equilibrium	70
6.3	Games without a Pure Strategy Nash Equilibrium	74
6.4	Interpretations of Nash Equilibrium	76
6.5	Existence of Multiple Nash Equilibria	78
6.6	Maxmin Values and Minmax Values	79
6.7	Equilibria in Extensive Form Games	82
6.8	Summary and References	85
6.9	Exercises	87

7.	Mixed Strategies and Mixed Strategy Nash Equilibrium	93
7.1	Mixed Strategies	93
7.2	Mixed Strategy Nash Equilibrium	95
7.3	Properties of Mixed Strategies	96
7.4	Necessary and Sufficient Conditions for a Profile to be a Mixed Strategy Nash Equilibrium	98
7.5	Maxmin Values and Minmax Values in Mixed Strategies	104
7.6	Domination in Mixed Strategies	106
7.7	Summary and References	109
7.8	Exercises	111
8.	Utility Theory	115
8.1	Need for Utility Theory	115
8.2	Axioms of von Neumann - Morgenstern Utility Theory	117
8.3	The von Neumann - Morgenstern Theorem	121
8.4	Affine Transformations	123
8.5	Computing von Neumann - Morgenstern Utilities	124
8.6	Risk Attitudes of Players	125
8.7	Summary and References	128
8.8	Exercises	129
9.	Matrix Games	131
9.1	Examples of Matrix Games	132
9.2	Pure Strategies in Matrix Games	133
9.3	Saddle Points and Pure Strategy Nash Equilibria	135
9.4	Mixed Strategies in Matrix Games	137
9.5	Minimax Theorem	142
9.6	Summary and References	145
9.7	Exercises	147
10.	Existence of Nash Equilibrium	149
10.1	Correspondences and Fixed Point Theorems	150
10.2	Nash Equilibrium as a Fixed Point	151
10.3	Sufficient Conditions for Existence of Pure Strategy Nash Equilibria	153
10.4	The Nash Theorem	154
10.5	Sperner's Lemma	156
10.6	Sperner's Lemma to Brouwer's Fixed Point Theorem	160
10.7	Proving Nash Theorem using Brouwer's Theorem	163
10.8	Existence of Nash Equilibrium in Infinite Games	165
10.9	Summary and References	166
10.10	Exercises	167

11. Computation of Nash Equilibria	169
11.1 Supports and Nash Equilibria	169
11.2 A General Algorithm for Finding Nash Equilibria of Finite Strategic Form Games	170
11.3 An Example for Computing Nash Equilibrium	173
11.4 Summary and References	176
11.5 Exercises	178
12. Complexity of Computing a Nash Equilibrium	181
12.1 Problems: NASH, BROUWER	181
12.2 The Class PPAD	182
12.3 NASH is PPAD -complete	185
12.4 Some Observations	185
12.5 Summary and References	187
13. Bayesian Games	189
13.1 Games with Incomplete Information	189
13.2 Examples of Bayesian Games	192
13.3 Type Agent Representation and the Selten Game	193
13.4 Bayesian Nash Equilibrium	196
13.5 Dominant Strategy Equilibria	198
13.6 Summary and References	199
13.7 Exercises	200
MECHANISM DESIGN	203
14. Introduction to Mechanism Design	205
14.1 Mechanism Design: Common Examples and History	205
14.2 Mechanism Design Environment	210
14.3 Direct and Indirect Mechanisms	212
14.4 Examples of Social Choice Functions	214
14.5 Summary and References	220
14.6 Exercises	221
15. Implementation of Social Choice Functions by Mechanisms	223
15.1 Implementation by Direct Mechanisms	223
15.2 Implementation by Indirect Mechanisms	227
15.3 Bayesian Game Induced by a Mechanism	230
15.4 Implementation of a Social Choice Function by a Mechanism . . .	231
15.5 Summary and References	234

15.6	Exercises	235
16.	Incentive Compatibility and Revelation Theorem	237
16.1	Incentive Compatibility	237
16.2	The Revelation Principle for Dominant Strategy Equilibrium . . .	240
16.3	The Revelation Principle for Bayesian Nash Equilibrium	241
16.4	Properties of Social Choice Functions	242
16.5	Summary and References	245
16.6	Exercises	246
17.	The Gibbard-Satterthwaite Impossibility Theorem	249
17.1	Preliminaries	249
17.2	The Gibbard-Satterthwaite Theorem	251
17.3	Proof of Gibbard Satterthwaite Theorem	255
17.4	Arrow's Impossibility Theorem	259
17.5	Summary and References	264
18.	Vickrey-Clarke-Groves (VCG) Mechanisms	267
18.1	The Quasilinear Environment	267
18.2	Groves Mechanisms	273
18.3	Clarke (Pivotal) Mechanisms	277
18.4	Examples of VCG Mechanisms	278
18.5	Summary and References	282
18.6	Exercises	284
19.	Mechanism Design Space in Quasilinear Environment	285
19.1	Groves Mechanisms and Strict Budget Balance	285
19.2	Clarke Mechanisms and Weak Budget Balance	286
19.3	Individual Rationality	288
19.4	VCG Mechanisms and Individual Rationality	289
19.5	The dAGVA Mechanism	292
19.6	Mechanism Design Space in Quasilinear Environment	297
19.7	Linear Environment	297
19.8	Summary and References	299
19.9	Exercises	301
20.	Auctions	303
20.1	Auction Types and Desirable Properties	303
20.2	Canonical Mechanisms for a Single Indivisible Item Auction	306
20.3	Revenue Equivalence of First Price and Second Price Auctions . .	308
20.4	Revenue Equivalence Theorem	310

20.5	Combinatorial Auctions	314
20.6	Summary and References	317
20.7	Exercises	318
21.	Optimal Mechanisms and Myerson Auction	321
21.1	Optimal Mechanisms	321
21.2	Myerson's Optimal Auction	323
21.3	Efficient Optimal Auctions	328
21.4	Summary and References	329
21.5	Exercises	330
22.	Mechanism Design for Sponsored Search Auctions	331
22.1	Sponsored Search Auction	331
22.2	Sponsored Search Auction as a Mechanism Design Problem	333
22.3	Generalized First Price (GFP) Mechanism	335
22.4	Generalized Second Price (GSP) Mechanism	336
22.5	Vickrey–Clarke–Groves (VCG) Mechanism	337
22.6	Optimal (OPT) Mechanism	340
22.7	Summary and References	347
22.8	Exercises	348
23.	Implementation in Ex-Post Nash Equilibrium	349
23.1	Implementation in Multiple Equilibria	349
23.2	Implementation in Nash Equilibrium	351
23.3	Implementability in Complete Information Setting	354
23.4	Summary and References	356
24.	Further Topics in Mechanism Design	357
24.1	Characterization of DSIC Mechanisms	357
24.2	Dominant Strategy Implementation of BIC Rules	358
24.3	Interdependent Values	358
24.4	Other Forms of Implementability	359
24.5	Key Current Topics	360
24.6	Computational Issues in Mechanism Design	360
24.7	Summary and References	361

COOPERATIVE GAME THEORY

363

25.	Correlated Strategies and Correlated Equilibrium	365
25.1	Games with Contracts	365
25.2	Correlated Strategies	367

25.3	Games with Communication	371
25.4	Correlated Equilibrium	374
25.5	Summary and References	377
25.6	Exercises	378
26.	The Two Person Bargaining Problem	381
26.1	Nash Program	381
26.2	The Two Person Bargaining Problem	382
26.3	The Nash Axioms	385
26.4	The Nash Bargaining Solution	388
26.5	Proof of the Nash Bargaining Theorem	389
26.6	Egalitarian and Utilitarian Solutions	394
26.7	Summary and References	396
26.8	Exercises	397
27.	Coalitional Games with Transferable Utility	399
27.1	Multi-Person Cooperative Games	399
27.2	Transferable Utility Games (TU Games)	403
27.3	TU Games with Special Structure	407
27.4	Cost Games	412
27.5	Summary and References	412
27.6	Exercises	413
28.	The Core of Coalitional Games	415
28.1	The Core: Definition and Examples	415
28.2	Characterization of Games with Non-Empty Core	420
28.3	The Core of Convex Games	424
28.4	The Core of Cost Games	425
28.5	Summary and References	426
28.6	Exercises	427
29.	The Shapley Value	429
29.1	The Shapley Axioms	430
29.2	Shapley's Theorem and Examples	432
29.3	Proof of the Shapley Theorem	435
29.4	Alternative Formulae for Shapley Value	439
29.5	Shapley Value of Convex Games	440
29.6	Shapley - Shubik Power Index	441
29.7	Banzhaf Index	442
29.8	Summary and References	442
29.9	Exercises	444

30. Other Solution Concepts in Cooperative Game Theory	447
30.1 Stable Sets	447
30.2 Bargaining Set	449
30.3 Kernel	453
30.4 Nucleolus	454
30.5 The Gately Point	455
30.6 Summary and References	456
30.7 Exercises	458
31. Stable Matching	459
31.1 The Matching Problem	459
31.2 Matching Algorithms	460
31.3 Matching Markets	465
31.4 Summary and References	466
31.5 Exercises	467
32. Epilogue	469
32.1 Intent of the Book	469
32.2 To Probe Further	470
32.3 Conclusion	472
33. Mathematical Preliminaries	475
33.1 Probability Theory	475
33.2 Linear Algebra	477
33.3 Linear Programming and Duality	478
33.4 Mathematical Analysis	481
33.5 Computational Complexity Classes	484
33.6 Summary and References	485
<i>Index</i>	487
