

Contents

An Adaptive POD Approximation Method for the Control of Advection-Diffusion Equations	1
Alessandro Alla and Maurizio Falcone	
Generalized Sensitivity Analysis for Delay Differential Equations	19
H.T. Banks, Danielle Robbins, and Karyn L. Sutton	
Regularity and Unique Existence of Solution to Linear Diffusion Equation with Multiple Time-Fractional Derivatives	45
Susanne Beckers and Masahiro Yamamoto	
Nonsmooth Optimization Method and Sparsity	57
Kazufumi Ito	
Parareal in Time Intermediate Targets Methods for Optimal Control Problems	79
Yvon Maday, Mohamed-Kamel Riahi, and Julien Salomon	
Hamilton–Jacobi–Bellman Equations on Multi-domains	93
Zhiping Rao and Hasnaa Zidani	
Gradient Computation for Model Calibration with Pointwise Observations	117
Ekkehard W. Sachs and Matthias Schu	
Numerical Analysis of POD A-posteriori Error Estimation for Optimal Control	137
Alina Studinger and Stefan Volkwein	
Cubature on C^1 Space	159
Gabriel Turinici	
A Globalized Newton Method for the Optimal Control of Fermionic Systems	173
Gregory von Winckel	

**A Priori Error Estimates for Optimal Control Problems with Constraints
on the Gradient of the State on Nonsmooth Polygonal Domains . . . 193**
Winnifried Wollner
