

Contents

Preface xi

Part One: Immunology

- 1 Defense and Danger 3
- 2 Tracing an Immune Response 14
- 3 The Laws of Immunology: Universality, Tolerance, and Appropriateness 20
- 4 Growing Up and Learning Immunology 29

Part Two: The First Law: Universality

- 5 Vaccines and Serum Therapy 39
- 6 How Is Specificity Achieved? 43
- 7 Immunology's "Eureka": Clonal Selection 58
- 8 How Does Each Lymphocyte Develop a Distinct Receptor? 72
- 9 B Cells and T Cells Recognize Different Types of Antigens 82
- 10 My Foray into the Specificity Problem 88
- 11 Genes and Immune Responses 93
- 12 The Laboratory of Immunology and the T-Cell Receptor 101

Part Three: The Second Law: Tolerance

- 13 What Is Tolerance? 107
- 14 How Does Tolerance Develop? 114
- 15 Regulatory T Cells and the Prevention of Autoimmunity 118

Part Four: The Third Law: Appropriateness

- 16 Different Structures, Different Functions 129
- 17 Specific Types of Infections, Specific Types of
 T-Cell Responses 137
- 18 Our Discovery of IL-4 and the Cells That Make It 140
- 19 CD8 T Cells: Killer Cells and Friends 144
- 20 Dendritic Cells: The Cells That Interpret the
 Infectious Threat 149

Part Five: How Did the Immune System Evolve?

- 21 An “Ancient” Immune Response Controls “Modern” Immunity 155
- 22 The Microbiome and Innate Immunity 168
- 23 Evolution of the Immune System and Innate Lymphoid Cells 173

**Part Six: AIDS, Autoimmunity, Allergy, Cancer, and
Transplantation**

- 24 The HIV Epidemic and the Office of AIDS Research 183
- 25 How the Immune System Causes Rheumatoid Arthritis
 and Lupus 192
- 26 Allergy and Asthma 201
- 27 Interleukin-4 and Allergy 205
- 28 Can the Immune System Control Cancer? 208
- 29 New Parts for Old: Bone Marrow and Organ Transplantation 215
- 30 Julien 222

Conclusion. The Future of Immunology 229

Epilogue 237

Acknowledgments 241

Notes 243
