<b>1</b>	<b>New Structures on Valuations and Applications</b>	<b>1</b>
	<i>Semyon Alesker</i>	
	Introduction . . . . .	1
1.1	Translation-invariant valuations on convex sets . . . . .	3
1.1.1	Definitions . . . . .	3
1.1.2	McMullen’s theorem and mixed volumes . . . . .	4
1.1.3	Hadwiger’s theorem . . . . .	5
1.1.4	Irreducibility theorem . . . . .	6
1.1.5	Klain–Schneider characterization of simple valuations . . .	7
1.1.6	Smooth translation-invariant valuations . . . . .	8
1.1.7	Product on smooth translation-invariant valuations and Poincaré duality . . . . .	8
1.1.8	Pull-back and push-forward of translation-invariant valuations . . . . .	11
1.1.9	Convolution . . . . .	13
1.1.10	Hard Lefschetz type theorems . . . . .	14
1.1.11	A Fourier-type transform on translation-invariant convex valuations . . . . .	14
1.1.12	General constructions of translation-invariant convex valuations . . . . .	18
1.1.13	Valuations invariant under a group . . . . .	21
1.2	Valuations on manifolds . . . . .	22
1.2.1	Definition of smooth valuations on manifolds and basic examples . . . . .	22
1.2.2	Canonical filtration on smooth valuations . . . . .	25
1.2.3	Integration functional . . . . .	25
1.2.4	Product operation on smooth valuations on manifolds and Poincaré duality . . . . .	26
1.2.5	Generalized valuations and constructible functions . . . . .	27
1.2.6	Euler–Verdier involution . . . . .	29
1.2.7	Partial product operation on generalized valuations . . . . .	30
1.2.8	A heuristic remark . . . . .	31
1.2.9	A few examples of computation of the product in integral geometry . . . . .	31
1.2.10	Functorial properties of valuations . . . . .	33
1.2.11	Radon transform on valuations on manifolds . . . . .	36
1.2.12	Khovanskii–Pukhlikov-type inversion formula for the Radon transform on valuations on $\mathbb{RP}^n$ . . . . .	38

Bibliography . . . . .	41
<b>2 Algebraic Integral Geometry</b>	<b>47</b>
<i>Joseph H. G. Fu</i>	
Introduction . . . . .	47
About these notes . . . . .	48
Acknowledgments . . . . .	48
Notation and conventions . . . . .	49
2.1 Classical integral geometry . . . . .	49
2.1.1 Intrinsic volumes and Federer curvature measures . . . . .	50
2.1.2 Other incarnations of the normal cycle . . . . .	53
2.1.3 Crofton formulas . . . . .	53
2.1.4 The classical kinematic formulas . . . . .	54
2.1.5 The Weyl principle . . . . .	57
2.2 Curvature measures and the normal cycle . . . . .	60
2.2.1 Properties of the normal cycle . . . . .	60
2.2.2 General curvature measures . . . . .	61
2.2.3 Kinematic formulas for invariant curvature measures . . . . .	62
2.2.4 The transfer principle . . . . .	64
2.3 Integral geometry of Euclidean spaces via Alesker theory . . . . .	67
2.3.1 Survey of valuations on finite-dimensional real vector spaces . . . . .	67
2.3.2 Constant coefficient valuations . . . . .	70
2.3.3 The FTAIG for isotropic structures on Euclidean spaces . . . . .	73
2.3.4 The classical integral geometry of $\mathbb{R}^n$ . . . . .	76
2.4 Valuations and integral geometry on isotropic manifolds . . . . .	79
2.4.1 Brief definition of valuations on manifolds . . . . .	79
2.4.2 First variation, the Rumin operator, and the kernel theorem . . . . .	81
2.4.3 The filtration and the transfer principle for valuations . . . . .	85
2.4.4 The FTAIG for compact isotropic spaces . . . . .	86
2.4.5 Analytic continuation . . . . .	87
2.4.6 Integral geometry of real space forms . . . . .	91
2.5 Hermitian integral geometry . . . . .	94
2.5.1 Algebra structure of $\text{Val}^{U(n)}(\mathbb{C}^n)$ . . . . .	95
2.5.2 Hermitian intrinsic volumes and special cones . . . . .	97
2.5.3 Tasaki valuations and a mysterious duality . . . . .	100
2.5.4 Determination of the kinematic operator of $(\mathbb{C}^n, U(n))$ . . . . .	102
2.5.5 Integral geometry of complex space forms . . . . .	103
2.6 Concluding remarks . . . . .	105
Bibliography . . . . .	109
