Letter from the Author xvii

Preface xviii

## Chapter 1 Introduction to Genetics 1

### Albinism in the Hopis 1

#### 1.1 Genetics Is Important to Us Individually, to Society, and to the Study of Biology 2

The Role of Genetics in Biology 4

Genetic Diversity and Evolution 4

DNA in the Biosphere 5

Divisions of Genetics 5

Model Genetic Organisms 6

#### 1.2 Humans Have Been Using Genetic Techniques for Thousands of Years 7

The Early Use and Understanding of Heredity 7

The Rise of the Science of Genetics 9

The Cutting Edge of Genetics 11

#### 1.3 A Few Fundamental Concepts Are Important for the Start of Our Journey into Genetics 12

## Chapter 2 Chromosomes and Cellular Reproduction 17

### The Blind Men's Riddle 17

#### 2.1 Prokaryotic and Eukaryotic Cells Differ in a Number of Genetic Characteristics 18

#### 2.2 Cell Reproduction Requires the Copying of the Genetic Material, Separation of the Copies, and Cell Division 20

Prokaryotic Cell Reproduction  
by Binary Fission 20

Eukaryotic Cell Reproduction 20

The Cell Cycle and Mitosis 23

Genetic Consequences of the Cell Cycle 26

**CONNECTING CONCEPTS** Counting Chromosomes and DNA Molecules 27

#### 2.3 Sexual Reproduction Produces Genetic Variation Through the Process of Meiosis 28

Meiosis 28

Sources of Genetic Variation in Meiosis 30

**CONNECTING CONCEPTS** Mitosis and Meiosis Compared 34

The Separation of Sister Chromatids and Homologous Chromosomes 34

Meiosis in the Life Cycles of Animals and Plants 35

## Chapter 3 Basic Principles of Heredity 47

### The Genetics of Blond Hair in the South Pacific 47

#### 3.1 Gregor Mendel Discovered the Basic Principles of Heredity 49

Mendel's Success 49

Genetic Terminology 50

#### 3.2 Monohybrid Crosses Reveal the Principle of Segregation and the Concept of Dominance 51

What Monohybrid Crosses Reveal 52

**CONNECTING CONCEPTS** Relating Genetic Crosses to Meiosis 54

The Molecular Nature of Alleles 54

Predicting the Outcomes of

Genetic Crosses 56

The Testcross 60

Genetic Symbols 60

**CONNECTING CONCEPTS** Ratios in Simple Crosses 61

#### 3.3 Dihybrid Crosses Reveal the Principle of Independent Assortment 61

Dihybrid Crosses 61

The Principle of Independent Assortment 62

Relating the Principle of Independent

Assortment to Meiosis 63

Applying Probability and the Branch

Diagram to Dihybrid Crosses 64

The Dihybrid Testcross 65

### **3.4 Observed Ratios of Progeny May Deviate from Expected Ratios by Chance 67**

The Chi-Square Goodness-of-Fit Test 67

## **Chapter 4 Sex Determination and Sex-Linked Characteristics 81**

### **The Sex of a Dragon 81**

#### **4.1 Sex Is Determined by a Number of Different Mechanisms 83**

Chromosomal Sex-Determining Systems 83

Genic Sex Determination 85

Environmental Sex Determination 85

Sex Determination in *Drosophila melanogaster* 87

Sex Determination in Humans 87

#### **4.2 Sex-Linked Characteristics Are Determined by Genes on the Sex Chromosomes 89**

X-Linked White Eyes in *Drosophila* 89

Nondisjunction and the Chromosome Theory of Inheritance 90

X-Linked Color Blindness in Humans 92

Symbols for X-Linked Genes 94

Z-Linked Characteristics 94

Y-Linked Characteristics 94

**CONNECTING CONCEPTS** Recognizing Sex-Linked Inheritance 97

#### **4.3 Dosage Compensation Equalizes the Amount of Protein Produced by X-Linked and Autosomal Genes in Some Animals 97**

The Lyon Hypothesis 98

Mechanism of Random X Inactivation 99

## **Chapter 5 Extensions and Modifications of Basic Principles 109**

### **The Odd Genetics of Left-Handed Snails 109**

#### **5.1 Additional Factors at a Single Locus Can Affect the Results of Genetic Crosses 110**

Types of Dominance 110

Penetrance and Expressivity 113

Lethal Alleles 114

Multiple Alleles 114

#### **5.2 Gene Interaction Takes Place When Genes at Multiple Loci Determine a Single Phenotype 116**

Gene Interaction That Produces Novel Phenotypes 117

Gene Interaction with Epistasis 118

**CONNECTING CONCEPTS** Interpreting Phenotypic Ratios Produced by Gene Interaction 122

Complementation: Determining Whether Mutations Are at the Same Locus or at Different Loci 124

The Complex Genetics of Coat Color in Dogs 124

#### **5.3 Sex Influences the Inheritance and Expression of Genes in a Variety of Ways 126**

Sex-Influenced and Sex-Limited Characteristics 126

Cytoplasmic Inheritance 128

Genetic Maternal Effect 130

Genomic Imprinting 131

#### **5.4 Anticipation Is the Stronger or Earlier Expression of Traits in Succeeding Generations 133**

#### **5.5 The Expression of a Genotype May Be Influenced by Environmental Effects 133**

Environmental Effects on the Phenotype 134

The Inheritance of Continuous Characteristics 134

## **Chapter 6 Pedigree Analysis, Applications, and Genetic Testing 145**

### **The Mystery of the Missing Fingerprints 145**

#### **6.1 The Study of Genetics in Humans Is Constrained by Special Features of Human Biology and Culture 146**

#### **6.2 Geneticists Often Use Pedigrees To Study the Inheritance of Characteristics in Humans 147**

Symbols Used in Pedigrees 147

Analysis of Pedigrees 148

Autosomal Recessive Traits 148

Autosomal Dominant Traits 149

X-Linked Recessive Traits 150  
 X-Linked Dominant Traits 151  
 Y-Linked Traits 152  
 Genetic Mosaicism 154

### **6.3 Studying Twins and Adoptions Can Help Us Assess the Importance of Genes and Environment 154**

Types of Twins 154  
 Concordance in Twins 155  
 A Twin Study of Asthma 156  
 Adoption Studies 156

### **6.4 Genetic Counseling and Genetic Testing Provide Information to Those Concerned about Genetic Diseases and Traits 157**

Genetic Counseling 157  
 Genetic Testing 158  
 Interpreting Genetic Tests 163  
 Direct-to-Consumer Genetic Testing 163  
 Genetic Discrimination and Privacy 164

## **Chapter 7 Linkage, Recombination, and Eukaryotic Gene Mapping 173**

### **Linked Genes and Bald Heads 173**

#### **7.1 Linked Genes Do Not Assort Independently 174**

#### **7.2 Linked Genes Segregate Together While Crossing Over Produces Recombination Between Them 176**

Notation for Crosses with Linkage 176  
 Complete Linkage Compared with Independent Assortment 177  
 Crossing Over Between Linked Genes 178  
 Calculating Recombination Frequency 180  
 Coupling and Repulsion 181

#### **CONNECTING CONCEPTS Relating Independent Assortment, Linkage, and Crossing Over 182**

Evidence for the Physical Basis of Recombination 183  
 Predicting the Outcomes of Crosses with Linked Genes 184  
 Testing for Independent Assortment 185  
 Gene Mapping with Recombination Frequencies 187  
 Constructing a Genetic Map with a Two-Point Testcross 188

### **7.3 A Three-Point Testcross Can Be Used to Map Three Linked Genes 189**

Constructing a Genetic Map with a Three-Point Testcross 190

#### **CONNECTING CONCEPTS Stepping Through the Three-Point Cross 195**

Effects of Multiple Crossovers 197  
 Mapping Human Genes 198  
 Mapping with Molecular Markers 199  
 Locating Genes with Genome-Wide Association Studies 199

### **7.4 Physical-Mapping Methods Are Used to Determine the Physical Positions of Genes on Particular Chromosomes 200**

Somatic-Cell Hybridization 201  
 Deletion Mapping 201  
 Physical Chromosome Mapping Through Molecular Analysis 203

### **7.5 Recombination Rates Exhibit Extensive Variation 203**

## **Chapter 8 Chromosome Variation 217**

### **Building a Better Banana 217**

#### **8.1 Chromosome Mutations Include Rearrangements, Aneuploidy, and Polyploidy 218**

Chromosome Morphology 218  
 Types of Chromosome Mutations 219

#### **8.2 Chromosome Rearrangements Alter Chromosome Structure 220**

Duplications 220  
 Deletions 222  
 Inversions 224  
 Translocations 227  
 Fragile Sites 229  
 Copy-Number Variations 229

#### **8.3 Aneuploidy Is an Increase or Decrease in the Number of Individual Chromosomes 230**

Types of Aneuploidy 230  
 Effects of Aneuploidy 230  
 Aneuploidy in Humans 232  
 Uniparental Disomy 235  
 Genetic Mosaicism 236

**8.4 Polyploidy Is the Presence of More Than Two Sets of Chromosomes 236**

Autopolyploidy 237

Allopolyploidy 238

The Significance of Polyploidy 240

**Chapter 9 Bacterial and Viral Genetic Systems 251**

**The Genetics of Medieval Leprosy 251**

**9.1 Bacteria and Viruses Have Important Roles in Human Society and the World Ecosystem 252**

Life in a Bacterial World 252

Bacterial Diversity 253

**9.2 Genetic Analysis of Bacteria Requires Special Methods 253**

Techniques for the Study of Bacteria 254

The Bacterial Genome 255

Plasmids 255

**9.3 Bacteria Exchange Genes Through Conjugation, Transformation, and Transduction 257**

Conjugation 258

Natural Gene Transfer and Antibiotic Resistance 264

Transformation in Bacteria 265

Bacterial Genome Sequences 266

Horizontal Gene Transfer 266

Bacterial Defense Mechanisms 267

**9.4 Viruses Are Simple Replicating Systems Amenable to Genetic Analysis 267**

Techniques for the Study of Bacteriophages 268

Transduction: Using Phages To Map Bacterial Genes 269

**CONNECTING CONCEPTS Three Methods for Mapping Bacterial Genes 271**

Gene Mapping in Phages 272

Plant and Animal Viruses 273

Human Immunodeficiency Virus and AIDS 274

Influenza 276

Rhinoviruses 276

**Chapter 10 DNA: The Chemical Nature of the Gene 287**

**Arctic Treks and Ancient DNA 287**

**10.1 Genetic Material Possesses Several Key Characteristics 288**

**10.2 All Genetic Information Is Encoded in the Structure of DNA or RNA 288**

Early Studies of DNA 289

DNA As the Source of Genetic Information 290

Watson and Crick's Discovery of the Three-Dimensional Structure of DNA 293

RNA As Genetic Material 295

**10.3 DNA Consists of Two Complementary and Antiparallel Nucleotide Strands That Form a Double Helix 296**

The Primary Structure of DNA 296

Secondary Structures of DNA 299

**CONNECTING CONCEPTS Genetic Implications of DNA Structure 301**

**10.4 Special Structures Can Form in DNA and RNA 302**

**Chapter 11 Chromosome Structure and Organelle DNA 311**

**Telomeres and Childhood Adversity 311**

**11.1 Large Amounts of DNA Are Packed into a Cell 312**

Supercoiling 313

The Bacterial Chromosome 314

Eukaryotic Chromosomes 314

Changes in Chromatin Structure 317

**11.2 Eukaryotic Chromosomes Possess Centromeres and Telomeres 319**

Centromere Structure 319

Telomere Structure 320

**11.3 Eukaryotic DNA Contains Several Classes of Sequence Variation 321**

The Denaturation and Renaturation of DNA 321

Types of DNA Sequences in Eukaryotes 321

Organization of Genetic Information in Eukaryotes 322

## **11.4 Organelle DNA Has Unique Characteristics 322**

- Mitochondrion and Chloroplast Structure 322
- The Endosymbiotic Theory 323
- Uniparental Inheritance of Organelle-Encoded Traits 324
- The Mitochondrial Genome 326
- The Evolution of Mitochondrial DNA 328
- Damage to Mitochondrial DNA Associated with Aging 329
- Mitochondrial Replacement Therapy 329
- The Chloroplast Genome 330
- Movement of Genetic Information Between Nuclear, Mitochondrial, and Chloroplast Genomes 331

## **Chapter 12 DNA Replication and Recombination 339**

### **Topoisomerase, Replication, and Cancer 339**

- 12.1 Genetic Information Must Be Accurately Copied Every Time a Cell Divides 340**
- 12.2 All DNA Replication Takes Place in a Semiconservative Manner 340**
  - Meselson and Stahl's Experiment 341
  - Modes of Replication 343
  - Requirements of Replication 346
  - Direction of Replication 346

**CONNECTING CONCEPTS** The Direction of Synthesis in Different Modes of Replication 348

- 12.3 Bacterial Replication Requires a Large Number of Enzymes and Proteins 348**
  - Initiation 348
  - Unwinding 348
  - Elongation 350
  - Termination 353
  - The Fidelity of DNA Replication 353

**CONNECTING CONCEPTS** The Basic Rules of Replication 354

- 12.4 Eukaryotic DNA Replication Is Similar to Bacterial Replication but Differs in Several Aspects 354**
  - Eukaryotic Origins of Replication 354
  - DNA Synthesis and the Cell Cycle 354

- The Licensing of DNA Replication 355
- Unwinding 355
- Eukaryotic DNA Polymerases 355
- Nucleosome Assembly 356
- The Location of Replication Within the Nucleus 357
- Replication at the Ends of Chromosomes 357
- Replication in Archaea 360

## **12.5 Recombination Takes Place Through the Alignment, Breakage, and Repair of DNA Strands 360**

- Models of Recombination 361
- Enzymes Required for Recombination 362
- Gene Conversion 363

## **Chapter 13 Transcription 373**

### **Death Cap Poisoning 373**

- 13.1 RNA, Consisting of a Single Strand of Ribonucleotides, Participates in a Variety of Cellular Functions 374**
  - An Early RNA World 374
  - The Structure of RNA 374
  - Classes of RNA 375
- 13.2 Transcription Is the Synthesis of an RNA Molecule from a DNA Template 376**
  - The Template 377
  - The Substrate for Transcription 379
  - The Transcription Apparatus 379
- 13.3 Bacterial Transcription Consists of Initiation, Elongation, and Termination 381**
  - Initiation 381
  - Elongation 383
  - Termination 384

**CONNECTING CONCEPTS** The Basic Rules of Transcription 386

- 13.4 Eukaryotic Transcription Is Similar to Bacterial Transcription but Has Some Important Differences 386**
  - Transcription and Nucleosome Structure 386
  - Promoters 386
  - Initiation 387

Elongation 389  
Termination 389

**13.5 Transcription in Archaea Is More Similar to Transcription in Eukaryotes Than to Transcription in Bacteria 390**

**Chapter 14 RNA Molecules and RNA Processing 399**

**A Royal Disease 399**

**14.1 Many Genes Have Complex Structures 400**

Gene Organization 400  
Introns 402  
The Concept of the Gene Revisited 403

**14.2 Messenger RNAs, which Encode Proteins, Are Modified after Transcription in Eukaryotes 403**

The Structure of Messenger RNA 404  
Pre-mRNA Processing 405  
RNA Splicing 407  
Alternative Processing Pathways 409  
RNA Editing 412

**CONNECTING CONCEPTS Eukaryotic Gene Structure and Pre-mRNA Processing 413**

**14.3 Transfer RNAs, which Attach to Amino Acids, Are Modified after Transcription in Bacterial and Eukaryotic Cells 414**

The Structure of Transfer RNA 414  
Transfer RNA Gene Structure and Processing 415

**14.4 Ribosomal RNA, a Component of the Ribosome, Is Also Processed after Transcription 416**

The Structure of the Ribosome 416  
Ribosomal RNA Gene Structure and Processing 417

**14.5 Small RNA Molecules Participate in a Variety of Functions 418**

RNA Interference 418  
Small Interfering RNAs and MicroRNAs 419  
Piwi-Interacting RNAs 420  
CRISPR RNA 420

**14.6 Long Noncoding RNAs Regulate Gene Expression 421**

**Chapter 15 The Genetic Code and Translation 429**

**A Child Without a Spleen 429**

**15.1 Many Genes Encode Proteins 430**

The One Gene, One Enzyme Hypothesis 430  
The Structure and Function of Proteins 433

**15.2 The Genetic Code Determines How the Nucleotide Sequence Specifies the Amino Acid Sequence of a Protein 435**

Breaking the Genetic Code 436  
The Degeneracy of the Code 438  
The Reading Frame and Initiation Codons 439  
Termination Codons 440  
The Universality of the Code 440

**CONNECTING CONCEPTS Characteristics of the Genetic Code 440**

**15.3 Amino Acids Are Assembled into a Protein Through Translation 441**

The Binding of Amino Acids to Transfer RNAs 441  
The Initiation of Translation 442  
Elongation 445  
Termination 446

**CONNECTING CONCEPTS A Comparison of Bacterial and Eukaryotic Translation 448**

**15.4 Additional Properties of RNA and Ribosomes Affect Protein Synthesis 449**

The Three-Dimensional Structure of the Ribosome 449  
Polyribosomes 449  
Messenger RNA Surveillance 449  
Folding and Posttranslational Modifications of Proteins 452  
Translation and Antibiotics 452

**Chapter 16 Control of Gene Expression in Bacteria 461**

**Operons and the Noisy Cell 461**

**16.1 The Regulation of Gene Expression Is Critical for All Organisms 462**

Genes and Regulatory Elements 463  
Levels of Gene Regulation 463  
DNA-Binding Proteins 464

## **16.2 Operons Control Transcription in Bacterial Cells 465**

- Operon Structure 465
- Negative and Positive Control: Inducible and Repressible Operons 466
- The *lac* Operon of *E. coli* 468
- lac* Mutations 471
- Positive Control and Catabolite Repression 475
- The *trp* Operon of *E. coli* 476

## **16.3 Some Operons Regulate Transcription Through Attenuation, the Premature Termination of Transcription 477**

- Attenuation in the *trp* Operon of *E. coli* 477
- Why Does Attenuation Take Place in the *trp* Operon? 481

## **16.4 Other Sequences Control the Expression of Some Bacterial Genes 481**

- Bacterial Enhancers 482
- Antisense RNA 482
- Riboswitches 482
- RNA-Mediated Repression Through Ribozymes 483

## **Chapter 17 Control of Gene Expression in Eukaryotes 491**

### **Genetic Differences That Make Us Human 491**

### **17.1 Eukaryotic Cells and Bacteria Share Many Features of Gene Regulation but Differ in Several Important Ways 492**

### **17.2 Changes in Chromatin Structure Affect the Expression of Eukaryotic Genes 493**

- DNase I Hypersensitivity 493
- Chromatin Remodeling 493
- Histone Modification 494
- DNA Methylation 497

### **17.3 The Initiation of Transcription Is Regulated by Transcription Factors and Transcriptional Regulator Proteins 497**

- Transcriptional Activators and Coactivators 497
- Transcriptional Repressors 499

- Enhancers and Insulators 500
- Regulation of Transcriptional Stalling and Elongation 500
- Coordinated Gene Regulation 501

### **17.4 Some Eukaryotic Genes Are Regulated by RNA Processing and Degradation 502**

- Gene Regulation Through RNA Splicing 502
- The Degradation of RNA 503

### **17.5 RNA Interference Is an Important Mechanism of Gene Regulation 504**

- Small Interfering RNAs and MicroRNAs 505
- Mechanisms of Gene Regulation by RNA Interference 505
- The Control of Development by RNA Interference 506
- RNA Crosstalk 506

### **17.6 The Expression of Some Genes Is Regulated by Processes That Affect Translation or by Modifications of Proteins 507**

**CONNECTING CONCEPTS A Comparison of Bacterial and Eukaryotic Gene Control 508**

## **Chapter 18 Gene Mutations and DNA Repair 515**

### **Lou Gehrig and Expanding Nucleotide Repeats 515**

### **18.1 Mutations Are Inherited Alterations in the DNA Sequence 516**

- The Importance of Mutations 516
- Categories of Mutations 517
- Types of Gene Mutations 518
- Functional Effects of Mutations 520
- Suppressor Mutations 521
- Mutation Rates 525

### **18.2 Mutations May Be Caused by a Number of Different Factors 526**

- Spontaneous Replication Errors 527
- Spontaneous Chemical Changes 528
- Chemically Induced Mutations 528
- Radiation 532

### **18.3 Mutations Are the Focus of Intense Study by Geneticists 532**

- Detecting Mutagens with the Ames Test 532
- Effects of Radiation Exposure in Humans 533

## **18.4 Transposable Elements Can Cause Mutations 534**

- General Characteristics of Transposable Elements 534
- The Process of Transposition 535
- The Mutagenic Effects of Transposition 536
- Transposable Elements in Bacteria 538
- Transposable Elements in Eukaryotes 539

### **CONNECTING CONCEPTS Types of Transposable Elements 543**

- Transposable Elements in Genome Evolution 543

## **18.5 A Number of Pathways Can Repair DNA 544**

- Mismatch Repair 544
- Direct Repair 545
- Base-Excision Repair 545
- Nucleotide-Excision Repair 546

### **CONNECTING CONCEPTS The Basic Pathway of DNA Repair 547**

- Repair of Double-Strand Breaks 547
- Translesion DNA Polymerases 548
- Genetic Diseases and Faulty DNA Repair 548

## **Chapter 19 Molecular Genetic Analysis and Biotechnology 559**

### **Editing the Genome with CRISPR-Cas9 559**

#### **19.1 Genetics Has Been Transformed by the Development of Molecular Techniques 560**

- Key Innovations in Molecular Genetics 561
- Working at the Molecular Level 561

#### **19.2 Molecular Techniques Are Used to Cut and Visualize DNA Sequences 562**

- Recombinant DNA Technology 562
- Restriction Enzymes 562
- Engineered Nucleases 564
- CRISPR-Cas Genome Editing 564
- Separating and Viewing DNA Fragments 567
- Locating DNA Fragments with Probes 568

#### **19.3 Specific DNA Fragments Can Be Amplified 568**

- The Polymerase Chain Reaction 569
- Gene Cloning 571

#### **19.4 Molecular Techniques Can Be Used to Find Genes of Interest 576**

- DNA Libraries 576
- In Situ Hybridization 578
- Positional Cloning 579

#### **19.5 DNA Sequences Can Be Determined and Analyzed 582**

- Dideoxy Sequencing 582
- Next-Generation Sequencing Technologies 584
- DNA Fingerprinting 586

#### **19.6 Molecular Techniques Are Increasingly Used to Analyze Gene Function 589**

- Forward and Reverse Genetics 589
- Creating Random Mutations 589
- Targeted Mutagenesis 589
- Transgenic Animals 590
- Knockout Mice 591
- Silencing Genes with RNAi 593
- Using RNAi to Treat Human Disease 594

#### **19.7 Biotechnology Harnesses the Power of Molecular Genetics 595**

- Pharmaceutical Products 595
- Specialized Bacteria 595
- Agricultural Products 595
- Genetic Testing 596
- Gene Therapy 596

## **Chapter 20 Genomics and Proteomics 605**

### **Building a Chromosome for Class 605**

#### **20.1 Structural Genomics Determines the DNA Sequences and Organization of Entire Genomes 606**

- Genetic Maps 607
- Physical Maps 608
- Sequencing an Entire Genome 608
- The Human Genome Project 610
- What Exactly Is the Human Genome? 613
- Single-Nucleotide Polymorphisms 613
- Copy-Number Variations 615

Bioinformatics 615  
 Metagenomics 616  
 Synthetic Biology 617

## **20.2 Functional Genomics Determines the Functions of Genes by Using Genomic Approaches 617**

Predicting Function from Sequence 618  
 Gene Expression 619  
 Gene Expression and Reporter Sequences 622  
 Genome-Wide Mutagenesis 623

## **20.3 Comparative Genomics Studies How Genomes Evolve 624**

Prokaryotic Genomes 624  
 Eukaryotic Genomes 625  
 The Human Genome 628

## **20.4 Proteomics Analyzes the Complete Set of Proteins Found in a Cell 629**

Determination of Cellular Proteins 629  
 Affinity Capture 631  
 Protein Microarrays 631  
 Structural Proteomics 632

## **Chapter 21 Epigenetics 641**

### **Epigenetics and the Dutch Hunger Winter 641**

#### **21.1 What Is Epigenetics? 642**

#### **21.2 Several Molecular Processes Lead to Epigenetic Changes 643**

DNA Methylation 643  
 Histone Modifications 645  
 Epigenetic Effects of RNA Molecules 647

#### **21.3 Epigenetic Processes Produce a Diverse Set of Effects 647**

Paramutation 647  
 Behavioral Epigenetics 650  
 Epigenetic Effects of Environmental Chemicals 651  
 Epigenetic Effects on Metabolism 652  
 Epigenetic Effects in Monozygotic Twins 652  
 X Inactivation 652  
 Epigenetic Changes Associated with Cell Differentiation 654  
 Genomic Imprinting 655

#### **21.4 The Epigenome 656**

## **Chapter 22 Developmental Genetics and Immunogenetics 663**

### **The Origin of Spineless Sticklebacks 663**

#### **22.1 Development Takes Place Through Cell Determination 664**

Cloning Experiments on Plants 665  
 Cloning Experiments on Animals 665

#### **22.2 Pattern Formation in *Drosophila* Serves as a Model for the Genetic Control of Development 666**

The Development of the Fruit Fly 666  
 Egg-Polarity Genes 667  
 Segmentation Genes 670  
 Homeotic Genes in *Drosophila* 671  
 Homeobox Genes in Other Organisms 672

#### **CONNECTING CONCEPTS The Control of Development 673**

Epigenetic Changes in Development 674

#### **22.3 Genes Control the Development of Flowers in Plants 674**

Flower Anatomy 674  
 Genetic Control of Flower Development 674

#### **CONNECTING CONCEPTS Comparison of Development in *Drosophila* and Flowers 676**

#### **22.4 Programmed Cell Death Is an Integral Part of Development 676**

#### **22.5 The Study of Development Reveals Patterns and Processes of Evolution 678**

#### **22.6 The Development of Immunity Occurs Through Genetic Rearrangement 679**

The Organization of the Immune System 680  
 Immunoglobulin Structure 682  
 The Generation of Antibody Diversity 682  
 T-Cell-Receptor Diversity 684  
 Major Histocompatibility Complex Genes 684  
 Genes and Organ Transplants 685

## **Chapter 23 Cancer Genetics 691**

### **Palladin and the Spread of Cancer 691**

#### **23.1 Cancer Is a Group of Diseases Characterized by Cell Proliferation 692**

Tumor Formation 693  
 Cancer As a Genetic Disease 693

- The Role of Environmental Factors in Cancer 695
- 23.2 Mutations in Several Types of Genes Contribute to Cancer 696**
  - Oncogenes and Tumor-Suppressor Genes 696
  - Genes That Control the Cell Cycle 698
  - DNA-Repair Genes 702
  - Genes That Regulate Telomerase 702
  - Genes That Promote Vascularization and the Spread of Tumors 703
  - MicroRNAs and Cancer 703
  - Cancer Genome Projects 704
- 23.3 Epigenetic Changes Are Often Associated with Cancer 705**
- 23.4 Colorectal Cancer Arises Through the Sequential Mutation of a Number of Genes 705**
- 23.5 Changes in Chromosome Number and Structure Are Often Associated with Cancer 706**
- 23.6 Viruses Are Associated with Some Cancers 708**
  - Retroviruses and Cancer 708
  - Human Papillomavirus and Cervical Cancer 709

## **Chapter 24 Quantitative Genetics 715**

### **Corn Oil and Quantitative Genetics 715**

- 24.1 Quantitative Characteristics Are Influenced by Alleles at Multiple Loci 716**
  - The Relation Between Genotype and Phenotype 716
  - Types of Quantitative Characteristics 718
  - Polygenic Inheritance 719
  - Kernel Color in Wheat 719
  - Determining Gene Number for a Polygenic Characteristic 721
- 24.2 Statistical Methods Are Required for Analyzing Quantitative Characteristics 721**
  - Distributions 721
  - Samples and Populations 722

- The Mean 723
- The Variance and Standard Deviation 723
- Correlation 724
- Regression 725
- Applying Statistics to the Study of a Polygenic Characteristic 727

### **24.3 Heritability Is Used to Estimate the Proportion of Variation in a Trait That Is Genetic 728**

- Phenotypic Variance 728
- Types of Heritability 730
- Calculating Heritability 730
- The Limitations of Heritability 732
- Locating Genes That Affect Quantitative Characteristics 734

### **24.4 Genetically Variable Traits Change in Response to Selection 736**

- Predicting the Response to Selection 737
- Limits to the Response to Selection 738
- Correlated Responses to Selection 739

## **Chapter 25 Population Genetics 749**

### **The Wolves of Isle Royale 749**

### **25.1 Genotypic and Allelic Frequencies Are Used To Describe the Gene Pool of a Population 751**

- Mathematical Models for Understanding Genetic Variation 751
- Calculating Genotypic Frequencies 751
- Calculating Allelic Frequencies 752

### **25.2 The Hardy–Weinberg Law Describes the Effect of Reproduction on Genotypic and Allelic Frequencies 753**

- Genotypic Frequencies at Hardy–Weinberg Equilibrium 754
- Closer Examination of the Hardy–Weinberg Law 755
- Implications of the Hardy–Weinberg Law 755
- Extensions of the Hardy–Weinberg Law 756
- Testing for Hardy–Weinberg Proportions 756
- Estimating Allelic Frequencies with the Hardy–Weinberg Law 757

### **25.3 Nonrandom Mating Affects the Genotypic Frequencies of a Population 758**

## **25.4 Several Evolutionary Forces Can Change Allelic Frequencies 760**

Mutation 760

Migration 762

Genetic Drift 763

Natural Selection 766

**CONNECTING CONCEPTS** The General Effects of Forces That Change Allelic Frequencies 771

## **Chapter 26 Evolutionary Genetics 779**

### **Taster Genes in Spitting Apes 779**

### **26.1 Evolution Occurs Through Genetic Change within Populations 780**

Biological Evolution 780

Evolution as a Two-Step Process 781

Evolution in Bighorn Sheep 781

### **26.2 Many Natural Populations Contain High Levels of Genetic Variation 782**

Molecular Variation 782

### **26.3 New Species Arise Through the Evolution of Reproductive Isolation 784**

The Biological Species Concept 784

Reproductive Isolating Mechanisms 784

Modes of Speciation 786

Genetic Differentiation Associated with Speciation 791

### **26.4 The Evolutionary History of a Group of Organisms Can Be Reconstructed by Studying Changes in Homologous Characteristics 791**

The Alignment of Homologous Sequences 793

The Construction of Phylogenetic Trees 793

## **26.5 Patterns of Evolution Are Revealed by Molecular Changes 794**

Rates of Molecular Evolution 794

The Molecular Clock 796

Evolution Through Changes in Gene Regulation 797

Genome Evolution 798

## **Reference Guide to Model Genetic Organisms A1**

The Fruit Fly *Drosophila melanogaster* A2

The Bacterium *Escherichia coli* A4

The Nematode Worm *Caenorhabditis elegans* A6

The Plant *Arabidopsis thaliana* A8

The Mouse *Mus musculus* A10

The Yeast *Saccharomyces cerevisiae* A12
