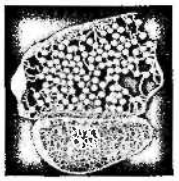
Contents

CHAPTER 1
Studying the Nervous System 1

Overview 1
Genetics and Genomics 1
Cellular Components of the Nervous System 2
Neurons 5
Glial Cells 7
Cellular Diversity in the Nervous System 9
Neural Circuits 10
Other Ways to Study Neural Circuits 11
Organization of the Human Nervous System 13
Neural Systems 16
Genetic Analysis of Neural Systems 16
BOX 1A Model Organisms in Neuroscience 17
Structural Analysis of Neural Systems 19
Functional Analysis of Neural Systems 21
Analyzing Complex Behavior 22
Imaging the Living Human Brain 22
Early Brain Imaging Using X-Rays 22
Early Functional Mapping Using Cortical Surface Stimulation and Electroencephalography 23
Computerized Tomography 25
Magnetic Resonance Imaging 25
Functional Brain Imaging 27
Summary 28
Additional Reading 29



UNIT I Neural Signaling 31

CHAPTER 2
Electrical Signals of Nerve Cells 33

Overview 33
Electrical Signals of Nerve Cells 33
Long-Distance Transmission of Electrical Signals 35
How Ion Movements Produce Electrical Signals 37
Forces That Create Membrane Potentials 39
Electrochemical Equilibrium in an Environment with More Than One Permeant Ion 40
The Ionic Basis of the Resting Membrane Potential 42
BOX 2A The Remarkable Giant Nerve Cells of Squid 43
The Ionic Basis of Action Potentials 44
BOX 2B Action Potential Form and Nomenclature 45
Summary 45
Additional Reading 46

CHAPTER 3
Voltage-Dependent Membrane Permeability 47

Overview 47
Ion Currents across Nerve Cell Membranes 47
BOX 3A The Voltage Clamp Method 48
Two Types of Voltage-Dependent Ion Currents 49
Two Voltage-Dependent Membrane Conductances 51

digitalisiert durch:
IDS Basel Bern

Reconstruction of the Action Potential 53
Long-Distance Signaling by Means of Action Potentials 55
Increased Conduction Velocity as a Result of Myelination 57
Summary 57
Additional Reading 60

CHAPTER 4
Ion Channels and Transporters 61

Overview 61
Ion Channels Underlying Action Potentials 61
BOX 4A The Patch Clamp Method 62
How Ion Channels Work 65
BOX 4B Toxins That Poison Ion Channels 67
The Diversity of Ion Channels 68
Voltage-Gated Ion Channels 69
Ligand-Gated Ion Channels 71
Thermosensitive and Mechanosensitive Channels 72
Active Transporters Create and Maintain Ion Gradients 72
ATPase Pumps 73
Ion Exchangers 75
Summary 76
Additional Reading 76

CHAPTER 5
Synaptic Transmission 79

Overview 79
Two Classes of Synapses 79
Signaling Transmission at Electrical Synapses 80
Signaling Transmission at Chemical Synapses 82
Properties of Neurotransmitters 83
Quantal Release of Neurotransmitters 85
Release of Transmitters from Synaptic Vesicles 87
Local Recycling of Synaptic Vesicles 88
The Role of Calcium in Transmitter Secretion 89
Molecular Mechanisms of Synaptic Vesicle Cycling 90
Neurotransmitter Receptors 94
Postsynaptic Membrane Permeability Changes during Synaptic Transmission 95
Relationship between Ion Fluxes and Postsynaptic Potential Changes 98
Excitatory and Inhibitory Postsynaptic Potentials 99
Summation of Synaptic Potentials 100
Summary 101
BOX 5A The Tripartite Synapse 102
Additional Reading 103

CHAPTER 6
Neurotransmitters and Their Receptors 105

Overview 105
Categories of Neurotransmitters 105
Acetylcholine 105
BOX 6A Neurotoxins That Act on Neurotransmitter Receptors 109
Glutamate 112
GABA and Glycine 117
BOX 6B Excitatory Actions of GABA in the Developing Brain 120
Biogenic Amines 122
ATP and Other Purines 126
Peptide Neurotransmitters 128
Unconventional Neurotransmitters 130
BOX 6C Marijuana and the Brain 132
Summary 134
Additional Reading 134

CHAPTER 7
Molecular Signaling within Neurons 137

Overview 137
Strategies of Molecular Signaling 137
Activation of Signaling Pathways 139
Receptor Types 140
G-Proteins and Their Molecular Targets 141
Second Messengers 143
BOX 7A Dynamic Imaging of Intracellular Signaling 145
Second-Messenger Signaling via Protein Phosphorylation 146
Protein Kinases 147
Protein Phosphatases 149

BOX 7B Dendritic Spines 150
Nuclear Signaling 152
Examples of Neuronal Signal Transduction 154
Summary 156
Additional Reading 157

CHAPTER 8
Synaptic Plasticity 159

Overview 159
Short-Term Synaptic Plasticity 159
Long-Term Synaptic Plasticity and Behavioral Modification in *Aplysia* 162
BOX 8A Genetics of Learning and Memory in the Fruit Fly 165
Long-Term Potentiation at a Hippocampal Synapse 166
Mechanisms Underlying Long-Term Potentiation 169
BOX 8B Silent Synapses 171
Mechanisms Underlying Long-Term Depression 173
Spike Timing-Dependent Plasticity 176
Summary 177
Additional Reading 177

UNIT II Sensation and Sensory Processing 179

CHAPTER 9
The Somatosensory System: Touch and Proprioception 181

Overview 181
Afferent Fibers Convey Somatosensory Information to the Central Nervous System 181
Somatosensory Afferents Convey Different Functional Information 182
Mechanoreceptors Specialized to Receive Tactile Information 185
Mechanoreceptors Specialized for Proprioception 188
Central Pathways Conveying Tactile Information from the Body: The Dorsal Column–Medial Lemniscal System 190
Central Pathways Conveying Tactile Information from the Face: The Trigeminothalamic System 190
Central Pathways Conveying Proprioceptive Information from the Body 192
Central Pathways Conveying Proprioceptive Information from the Face 193
Somatosensory Components of the Thalamus 193
Primary Somatosensory Cortex 193
BOX 9A Patterns of Organization within the Sensory Cortices: Brain Modules 194
Beyond SI: Corticocortical and Descending Pathways 196
Plasticity in the Adult Cerebral Cortex 196
Summary 198
Additional Reading 199

CHAPTER 10
Pain 201

Overview 201
Nociceptors 201
Transduction and Transmission of Nociceptive Signals 203
BOX 10A Capsaicin 204
Central Pain Pathways Are Distinct from Mechanosensory Pathways 204
BOX 10B Referred Pain 206
Parallel Pain Pathways 206
BOX 10C A Dorsal Column Pathway for Visceral Pain 208
Pain and Temperature Pathways for the Face 210

Other Modalities Mediated by the Anterolateral System 210
Sensitization 212
Descending Control of Pain Perception 214
The Placebo Effect 214
The Physiological Basis of Pain Modulation 214
Summary 217
Additional Reading 217

CHAPTER 11
Vision: The Eye 219

Overview 219
Anatomy of the Eye 219
Image Formation on the Retina 220
BOX 11A Myopia and Other Refractive Errors 221
The Retinal Surface 222
Retinal Circuitry 223
The Pigment Epithelium 225
BOX 11B Retinitis Pigmentosa 226
Phototransduction 226
Functional Specialization of the Rod and Cone Systems 229
Anatomical Distribution of Rods and Cones 232
Cones and Color Vision 233
BOX 11C The Importance of Context in Color Perception 234
Retinal Circuits for Light and Dark 237
BOX 11D The Perception of Light Intensity 237
The Adjustable Operating Range of Retinal Ganglion Cells 239
Luminance Contrast and Receptive Field Surrounds 240
Summary 243
Additional Reading 243

CHAPTER 12
Central Visual Pathways 245

Overview 245
Central Projections of Retinal Ganglion Cells 245
Functionally Distinct Types of Retinal Ganglion Cells 247
Retinotopic Representation of the Visual Field 247
Spatiotemporal Tuning Properties of Neurons in Primary Visual Cortex 249
Primary Visual Cortex Architecture 250
Combining Inputs from Two Eyes 254
BOX 12A Random Dot Stereograms and Related Amusements 256
Division of Labor within the Primary Visual Pathway 257
Functional Organization of Extrastriate Visual Areas 259
Summary 261
Additional Reading 262

CHAPTER 13
The Auditory System 265

Overview 265
Sound 265
The Audible Spectrum 266
A Synopsis of Auditory Function 266
The External Ear 267
The Middle Ear 268
The Inner Ear 270
Hair Cells and the Mechanoelectrical Transduction of Sound Waves 271
BOX 13A The Sweet Sound of Distortion 273
The Ionic Basis of Mechanotransduction in Hair Cells 274
The Hair Cell Mechanoelectrical Transduction Channel 275
The Cochlear Amplifier 276
Tuning and Timing in the Auditory Nerve 276
How Information from the Cochlea Reaches Targets in the Brainstem 278
Integrating Information from the Two Ears 279
Monaural Pathways from the Cochlear Nucleus to the Nuclei of the Lateral Lemniscus 281
Integration in the Inferior Colliculus 281
The Auditory Thalamus 281
The Auditory Cortex 282
BOX 13B Representing Complex Sounds in the Brains of Bats and Humans 284
Summary 285
Additional Reading 286

CHAPTER 14
The Vestibular System 287

Overview 287
The Vestibular Labyrinth 287
Vestibular Hair Cells 288
Otolith Organs: The Utricle and Saccule 288
How Otolith Neurons Sense Head Tilts and Translational Head Movements 291
Semicircular Canals 292
How Semicircular Canal Neurons Sense Head Rotations 293
Central Pathways for Stabilizing Gaze, Head, and Posture 294
BOX 14A Mauthner Cells in Fish 296
Vestibular-Cerebellar Pathways 298
Vestibular Pathways to the Thalamus and Cortex 299
Spatial Orientation Perception and Multisensory Integration 300
Summary 300
Additional Reading 300

CHAPTER 15
The Chemical Senses 303

Overview 303
Organization of the Olfactory System 303
Olfactory Perception in Humans 305
Assessing Olfactory Function in the Laboratory or Clinic 307
Physiological and Behavioral Responses to Olfactory Stimuli 308
Olfactory Epithelium and Olfactory Receptor Neurons 309
Odor Transduction and Odorant Receptor Proteins 311
BOX 15A The "Dogtor" Is In 313
Molecular and Physiological Mechanisms of Olfactory Odor Transduction 314
The Olfactory Bulb 317
Pyriform Cortical Processing of Information Relayed from the Olfactory Bulb 319
The Vomeronasal System: Predators, Prey, and Mates 322
The Vomeronasal System: Molecular Mechanisms of Sensory Transduction 323
Organization of the Taste System 324
Taste Perception in Humans 326
Taste Receptor Proteins and Transduction 328
Neural Coding in the Taste System 330
Summary 332
Additional Reading 333

UNIT III Movement and Its Central Control 335

CHAPTER 16
Lower Motor Neuron Circuits and Motor Control 337

Overview 337
Neural Centers Responsible for Movement 337
Motor Neuron–Muscle Relationships 339
The Motor Unit 341
Regulation of Muscle Force 343
BOX 16A Motor Unit Plasticity 343
The Spinal Cord Circuitry Underlying Muscle Stretch Reflexes 346
Modifying the Gain of Muscle Stretch Reflexes 348
The Spinal Cord Circuitry Underlying the Regulation of Muscle Force 350
Complimentary Functions of Muscle Spindles and Golgi Tendon Organs 351
Flexion Reflex Pathways 352
Spinal Cord Circuitry and Locomotion 352

BOX 16B Locomotion in the Leech and the Lamprey 353
The Lower Motor Neuron Syndrome 356
Summary 357
Additional Reading 357

CHAPTER 17
Upper Motor Neuron Control of the Brainstem and Spinal Cord 359

Overview 359
Organization of Descending Motor Control 359
The Corticospinal and Corticobulbar Tracts 361
Functional Organization of the Primary Motor Cortex 363
BOX 17A What Do Motor Maps Represent? 365
The Premotor Cortex 369
BOX 17B Minds and Machines 370
Motor Control Centers in the Brainstem: Upper Motor Neurons That Maintain Balance, Govern Posture, Initiate Locomotion, and Orient Gaze 374
BOX 17C The Reticular Formation 376
Damage to Descending Motor Pathways: The Upper Motor Neuron Syndrome 380
BOX 17D Muscle Tone 381
Summary 382
Additional Reading 382

CHAPTER 18
Modulation of Movement by the Basal Ganglia 385

Overview 385
Projections to the Basal Ganglia 385
BOX 18A Making and Breaking Habits 389
Projections from the Basal Ganglia to Other Brain Regions 390
Evidence from Studies of Eye Movements 391
Circuits within the Basal Ganglia System 392
Dopamine Modulates Basal Ganglia Circuits 395
Hypokinetic Movement Disorders 395
Hyperkinetic Movement Disorders 397
Summary 399
BOX 18B Basal Ganglia Loops and Non-Motor Brain Functions 400
Additional Reading 401

CHAPTER 19
Modulation of Movement by the Cerebellum 403

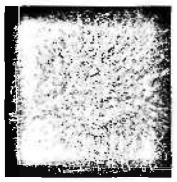
Overview 403
Organization of the Cerebellum 403
Projections to the Cerebellum 405
Projections from the Cerebellum 407
Circuits within the Cerebellum 409
Cerebellar Circuitry and the Coordination of Ongoing Movement 413
Further Consequences of Cerebellar Lesions 416
BOX 19A Genetic Analysis of Cerebellar Function 416
Summary 418
Additional Reading 419

CHAPTER 20
Eye Movements and Sensorimotor Integration 421

Overview 421
What Eye Movements Accomplish 421
Actions and Innervation of Extraocular Muscles 422
BOX 20A The Perception of Stabilized Retinal Images 422
Types of Eye Movements and Their Functions 424
Neural Control of Saccadic Eye Movements 426
BOX 20B Sensorimotor Integration in the Superior Colliculus 429
BOX 20C From Place Codes to Rate Codes 432
Neural Control of Smooth Pursuit Movements 434
Neural Control of Vergence Movements 435
Summary 435
Additional Reading 436

CHAPTER 21
The Visceral Motor System 437

Overview 437
Early Studies of the Visceral Motor System 437
Distinctive Features of the Visceral Motor System 438
The Sympathetic Division of the Visceral Motor System 438
BOX 21A The Hypothalamus 442
The Parasympathetic Division of the Visceral Motor System 445
The Enteric Nervous System 447
Sensory Components of the Visceral Motor System 448
Central Control of Visceral Motor Functions 449
BOX 21B Obesity and the Brain 451
Neurotransmission in the Visceral Motor System 452
Autonomic Regulation of Cardiovascular Function 453
Autonomic Regulation of the Bladder 455
Autonomic Regulation of Sexual Function 457
Summary 458
Additional Reading 458



UNIT IV The Changing Brain 461

CHAPTER 22
Early Brain Development 463

Overview 463
Formation of the Nervous System: Gastrulation and Neurulation 463
BOX 22A Stem Cells: Promise and Peril 465
Formation of the Major Brain Subdivisions 467
The Molecular Basis of Neural Induction 470
Stem Cells 472
Integrated Inductive Signals Establish Neuron Identity 474
Initial Differentiation of Neurons and Glia 475
Molecular Regulation of Neurogenesis 478
Generation of Neuronal Diversity 479
Molecular and Genetic Disruptions of Early Neural Development 479
Neuronal Migration in the Peripheral Nervous System 481
Neuronal Migration in the Central Nervous System 483
Molecular Mechanisms of Neuronal Migration and Cortical Migration Disorders 484
Cranial Placodes: The Critical Connection between the Brain and the Outside World 486
Summary 488
Additional Reading 488

CHAPTER 23
Construction of Neural Circuits 491

Overview 491
Neuronal Polarization: The First Step in Neural Circuit Formation 491
The Axon Growth Cone 493
BOX 23A Choosing Sides: Axon Guidance at the Optic Chiasm 494
The Molecular Basis of Growth Cone Motility 495
Non-Diffusible Signals for Axon Guidance 497
Chemoattraction and Chemorepulsion 499
Directed Dendritic Growth: Ensuring Polarity 502
Dendritic Tiling: Defining Synaptic Space 502
Formation of Topographic Maps 505
Selective Synapse Formation 505
Regulation of Neuronal Connections by Trophic Interactions 508
Competitive Interactions and the Formation of Neuronal Connections 510

BOX 23B Why Do Neurons Have Dendrites? 513
The Molecular Basis of Trophic Interactions 513
Neurotrophin Signaling 516
Summary 518
Additional Reading 519

CHAPTER 24
Circuit Development: Intrinsic Factors and Sex Differences 521

Overview 521
Sexual Dimorphisms and Sexually Dimorphic Behaviors 521
Sex, Gonads, Bodies, and Brains 523
BOX 24A The Science of Love (or, Love As a Drug) 525
Hormonal Influences on Sexually Dimorphic Development 527
Development of Dimorphisms in the Central Nervous System 529
Brain Dimorphisms and the Establishment of Reproductive Behaviors 529
Cellular and Molecular Basis of Sexually Dimorphic Development 532
Steroid Receptors and Responses in the Adult Brain 533
Human Genetic Disorders of Genotypic and Phenotypic Sex 534
Sexual Orientation and Human Brain Structure 536
Sex-Based Differences in Cognitive Functions 536
Summary 538
Additional Reading 538

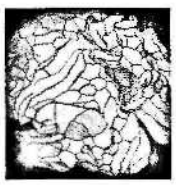
CHAPTER 25
Experience-Dependent Plasticity in the Developing Brain 541

Overview 541
Neural Activity and Brain Development 541
Critical Periods 543
BOX 25A Built-In Behaviors 544
The Role of Oscillations in Establishing Critical Periods 545
Critical Periods in Visual System Development 546
Effects of Visual Deprivation on Ocular Dominance 547
Manipulating Competition 551
Binocular Competition and Orientation Tuning for Binocular Vision 551
Amblyopia, Strabismus, and Critical Periods for Human Vision 552
Cellular and Molecular Regulation of Critical Periods 553
Evidence for Critical Periods in Other Sensory Systems 556
Language Development: A Critical Period for a Distinctly Human Behavior 557
Human Brain Development, Activity-Dependent Plasticity, and Critical Periods 559
Summary 561
Additional Reading 562

CHAPTER 26
Repair and Regeneration in the Nervous System 563

Overview 563
The Damaged Brain 563
Functional Reorganization without Repair 564
Three Types of Neuronal Repair 565
Peripheral Nerve Regeneration 567
The Cellular and Molecular Basis of Peripheral Nerve Repair 568
Regeneration of Peripheral Synapses 572
BOX 26A Specific Regeneration of Synaptic Connections in Autonomic Ganglia 574
Regeneration in the Central Nervous System 575
Cellular and Molecular Responses to Injury in the Central Nervous System 575
Glial Scar Formation in the Injured Brain 576
Immune Activation and Inflammation Following Brain Injury 577
Axon Growth after Brain Injury 580
Neurogenesis in the Mature Central Nervous System 581
Adult Neurogenesis in Non-Mammalian Vertebrates 581

Neurogenesis in the Adult Mammalian Brain 583
Cellular and Molecular Mechanisms of Adult Neurogenesis 583
Adult Neurogenesis, Stem Cells, and Brain Repair in Humans 586
BOX 26B Nuclear Weapons and Neurogenesis 587
Summary 589
Additional Reading 589



UNIT V Complex Brain Functions and Cognitive Neuroscience 591

CHAPTER 27
Cognitive Functions and the Organization of the Cerebral Cortex 593

Overview 593
A Primer on Cortical Structure 593
BOX 27A Cortical Lamination 595
Unique Features of the Association Cortices 596
The Parietal Association Cortex 597
BOX 27B Synesthesia 598
The Temporal Association Cortex 599
The Frontal Association Cortex 601
BOX 27C Neuropsychological Testing 603
Summary 606
Additional Reading 606

CHAPTER 28
Cortical States 609

Overview 609
The Circadian Cycle 609
Molecular Mechanisms of Biological Clocks 612
Sleep 613
BOX 28A Electroencephalography 613
The Purpose of Sleep 615
BOX 28B Sleep and Memory 616
Sleep in Different Species 616
The Stages of Sleep 616
The Physiological Changes in Sleep States 618
BOX 28C Dreaming 619
The Neural Circuits Governing Sleep 619
Thalamocortical Interactions in Sleep 622
Consciousness 623
The Neural Correlates of Consciousness 627
Comatose States 627
The "Default State" of the Brain 628
Summary 628
Additional Reading 629

CHAPTER 29
Attention 633

Overview 633
Attention as "Selective" Processing 633
Endogenous versus Exogenous Attention 634
Covert Attention 636
Attention across Sensory Modalities 636
Evidence for a Brain System That Controls Attention 636
Evidence from Neurological Patients: Hemispatial Neglect Syndrome 637
Other Brain Regions That Affect Attention 638
BOX 29A Attention and the Frontal Eye Fields 639
Evidence from Normal Subjects 639
Studies in Non-Human Primates 640
Problems with the Concept of Attention as Executive Control 641
Alternative Interpretations of Attention 642
Summary 643
Additional Reading 643

CHAPTER 30
Memory 645

Overview 645
Qualitative Categories of Human Memory 645
BOX 30A Phylogenetic Memory 646
Temporal Categories of Memory 647
Priming 648
The Importance of Association in Information Storage 649
Conditioned Learning 650
BOX 30B Savant Syndrome 651
Forgetting 651
Amnesia 653
Brain Systems Underlying Declarative Memory Acquisition and Storage 653
BOX 30C Alzheimer's Disease 656
BOX 30D Place Cells and Grid Cells 657
Sites of Long-Term Memory Storage 658
Brain Systems Underlying Nondeclarative Memory Acquisition and Storage 659
Memory and Aging 661
Summary 662
Additional Reading 663

CHAPTER 31
Emotion 665

Overview 665
Defining Emotion 665
Physiological Changes Associated with Emotion 665
The Integration of Emotional Behavior 666
Is the Motor Activity Underlying Emotion Cause or Effect? 668
BOX 31A Determination of Facial Expressions 669
The Limbic System 670
BOX 31B The Amygdala 672
The Importance of the Amygdala 673
BOX 31C Fear and the Human Amygdala 675
The Relationship between Neocortex and Amygdala 676
Cortical Lateralization of Emotional Functions 677
Emotion, Reason, and Social Behavior 678
Emotion and Addiction 679
Posttraumatic Stress Disorder 682
Summary 683
Additional Reading 684

CHAPTER 32
Thinking, Planning, and Deciding 687

Overview 687
A Sketch of the Relevant Circuitry 687
Orbitofrontal Cortex and the Evaluation of Options 688
BOX 32A Dopamine and Reward Prediction Errors 691
Dorsolateral Prefrontal Cortex and the Planning and Organization of Behavior 693
Cingulate Cortex and Learning from the Consequences of Behavior 696
Ventrolateral Prefrontal Cortex and Self-Control 697
Anterior Insula and the Internal Milieu 698
Posterior Cingulate Cortex and Self-Awareness 700
BOX 32B What Does Neuroscience Have to Say about Free Will? 701
Summary 703
Additional Reading 704

CHAPTER 33
Speech and Language 705

Overview 705
Representation of Language in the Brain 705
Aphasias 706
BOX 33A The Generation of Speech 707
An Ingenious Confirmation of Language Lateralization 709
BOX 33B Language and Handedness 711
The Search for Anatomical Differences between the Hemispheres 712
Mapping Language Functions 713
The Role of the Right Hemisphere in Language 716
Genes and Language 716
Sign Language 717

A Critical Period for Language Acquisition 718
Reading and Dyslexia 719
Do Other Animals Have Language? 720

BOX 33C Learned Vocal Communication in Birds 720

Summary 722
Additional Reading 723

APPENDIX
Survey of Human Neuroanatomy A-1

Overview A-1
Neuroanatomical Terminology A-1
Basic Subdivisions of the Central Nervous System A-2
External Anatomy of the Spinal Cord A-4
Internal Anatomy of the Spinal Cord A-5
Brainstem and Cranial Nerves A-7
Lateral Surface of the Brain A-13
Dorsal and Ventral Surfaces of the Brain A-14
Midsagittal Surface of the Brain A-14

BOX A Thalamus and Thalamocortical Relations A-17

Internal Anatomy of the Forebrain A-19
Blood Supply of the Brain and Spinal Cord A-20
The Blood-Brain Barrier A-27
The Meninges A-28
The Ventricular System A-28
References A-31
