

Contents

1 Introduction: What is molecular population genetics?	1
1.1 On the origins of molecular population genetics	1
1.2 What is the use of molecular population genetics?	8
Further reading	10
2 The origins of molecular diversity	11
2.1 Kinds of mutations	11
2.1.1 Single nucleotide mutation	11
2.1.2 Simple insertions and deletions	18
2.1.3 Tandem repeat mutations	18
2.1.4 Transposable elements	20
2.1.5 Duplications and large-scale mutations	21
2.2 Fitness effects of new mutations	22
2.2.1 Deleterious mutations	22
2.2.2 Neutral and nearly neutral mutations	25
2.2.3 Advantageous mutations	26
2.2.4 Magnitude and distribution of effects	26
2.3 Models of mutation	27
2.3.1 Recurrent mutation model	28
2.3.2 Infinite alleles model	29
2.3.3 Infinite sites model	29
2.3.4 Finite sites models	29
2.3.5 Stepwise mutation model	30
2.3.6 Birth-death model of gene duplication	30
2.3.7 Biological complexities in mutation	31
Further reading	32
3 Quantifying genetic variation at the molecular level	34
3.1 Heterozygosity	36
3.2 Allozyme variation	42
3.3 DNA sequence variation	43
3.3.1 Nucleotide polymorphism and diversity: θ_W and θ_π	44
3.3.2 The site frequency spectrum	50
3.4 Simple sequence repeat variation	52
3.5 Other measures of molecular diversity	52
3.6 Genetic variation among multiple populations	54
3.6.1 Quantifying population genetic structure with F_{ST}	54
3.6.2 Migration models and effects on population subdivision	59
Further reading	65

4 Neutral theories of molecular evolution	67
4.1 The standard neutral model	67
4.1.1 Neutral divergence and the molecular clock	69
4.1.2 Neutral predictions for polymorphism	74
4.2 Nearly Neutral Theory	78
4.3 More complex models of selective neutrality	81
4.4 Misconceptions about Neutral Theory	82
Further reading	83
5 Genealogy in evolution	85
5.1 Gene trees forward-in-time within species	85
5.2 Gene trees in reverse-time coalescence within species	88
5.3 Gene trees, species trees, and phylogeny among species	94
5.3.1 Substitution rates in divergence	98
5.3.2 Multiple hits in sequence divergence	104
5.3.3 Phylogeny: topology, discordance, and molecular clocks	107
5.4 Effects of recombination and hybridization on genealogies	110
Further reading	112
6 Recombination and linkage disequilibrium in evolutionary signatures	113
6.1 Linkage disequilibrium: what is it?	115
6.2 The causes of linkage disequilibrium	116
6.3 Measuring linkage disequilibrium	119
6.4 Gene conversion: non-crossover recombination	126
Further reading	128
7 Natural selection and demography as causes of molecular non-randomness	129
7.1 Natural selection	129
7.1.1 Positive selection	130
7.1.2 Balancing selection	136
7.1.3 Purifying selection	138
7.1.4 Connecting notions of selection at phenotypic and molecular levels	142
7.2 Population size changes	143
7.2.1 Population expansions	144
7.2.2 Population contractions and bottlenecks	145
7.3 Population structure and migration	146
7.3.1 Population structure and genealogies	148
7.3.2 Local adaptation in subpopulations	153
7.4 Genomic compartments of chromosomal linkage	153
Further reading	158

8 Molecular deviants: Sequence signatures of selection and demography	159
8.1 Skewed patterns of polymorphism	159
8.1.1 Too little or too much polymorphism	161
8.1.2 Skewed site frequency spectra	164
8.2 Sequence divergence and differentiation	170
8.2.1 K_A/K_S ratios	171
8.2.2 Population differentiation and F_{ST} outliers	175
8.2.3 Characterizing population structure and admixture	180
8.3 Polymorphism and divergence	181
8.3.1 The HKA test	182
8.3.2 The MK test	184
8.3.3 Extensions to the “MK framework”	189
8.4 Connecting quantitative genetics and molecular population genetics	191
Further reading	192
9 Case studies in molecular population genetics: Genotype to phenotype to selection	195
9.1 Coat color adaptation in mice	195
9.2 Flight ability in butterflies	200
9.3 Insecticide resistance in <i>Drosophila</i>	202
9.4 Body armor in stickleback fish	205
9.5 Alcohol tolerance in <i>Drosophila</i>	209
9.6 Advanced issues in molecular evolutionary signatures	212
Further reading	214
<i>Glossary of units, metrics, acronyms, and abbreviations</i>	217
<i>Glossary of terms and jargon</i>	223
<i>Index</i>	243
