

# Contents in Brief

1	Introduction to Genetics	1
2	Chromosomes and Cellular Reproduction	17
3	Basic Principles of Heredity	47
4	Sex Determination and Sex-Linked Characteristics	81
5	Extensions and Modifications of Basic Principles	111
6	Pedigree Analysis, Applications, and Genetic Testing	149
7	Linkage, Recombination, and Eukaryotic Gene Mapping	179
8	Chromosome Variation	223
9	Bacterial and Viral Genetic Systems	257
10	DNA: The Chemical Nature of the Gene	293
11	Chromosome Structure and Organelle DNA	317
12	DNA Replication and Recombination	345
13	Transcription	379
14	RNA Molecules and RNA Processing	405
15	The Genetic Code and Translation	435
16	Control of Gene Expression in Bacteria	469
17	Control of Gene Expression in Eukaryotes	501
18	Gene Mutations and DNA Repair	525
19	Molecular Genetic Analysis and Biotechnology	569
20	Genomics and Proteomics	615
21	Epigenetics	651
22	Developmental Genetics and Immunogenetics	675
23	Cancer Genetics	705
24	Quantitative Genetics	731
25	Population Genetics	765
26	Evolutionary Genetics	797
	Reference Guide to Model Genetic Organisms	A1
	Working with Fractions: A Review	B1
	Glossary	C1
	Answers to Selected Problems	D1
	Index	E1

Letter from the Author xviii

Preface xix

---

## Chapter 1 Introduction to Genetics 1

Albinism in the Hopis 1

### 1.1 Genetics Is Important to Us Individually, to Society, and to the Study of Biology 3

The Role of Genetics in Biology 4  
Genetic Diversity and Evolution 4  
DNA in the Biosphere 5  
Divisions of Genetics 5  
Model Genetic Organisms 6

### 1.2 Humans Have Been Using Genetic Techniques for Thousands of Years 8

The Early Use and Understanding of Heredity 8  
The Rise of the Science of Genetics 10  
The Cutting Edge of Genetics 11

### 1.3 A Few Fundamental Concepts Are Important for the Start of Our Journey into Genetics 12

---

## Chapter 2 Chromosomes and Cellular Reproduction 17

The Blind Men's Riddle 17

### 2.1 Prokaryotic and Eukaryotic Cells Differ in a Number of Genetic Characteristics 18

### 2.2 Cell Reproduction Requires the Copying of the Genetic Material, Separation of the Copies, and Cell Division 20

Prokaryotic Cell Reproduction by Binary Fission 20  
Eukaryotic Cell Reproduction 20  
The Cell Cycle and Mitosis 23  
Genetic Consequences of the Cell Cycle 26

**CONNECTING CONCEPTS** Counting Chromosomes and DNA Molecules 27

### 2.3 Sexual Reproduction Produces Genetic Variation Through the Process of Meiosis 28

Meiosis 28  
Sources of Genetic Variation in Meiosis 30

**CONNECTING CONCEPTS** Mitosis and Meiosis Compared 34

The Separation of Sister Chromatids and Homologous Chromosomes 34  
Meiosis in the Life Cycles of Animals and Plants 36

---

## Chapter 3 Basic Principles of Heredity 47

The Genetics of Blond Hair in the South Pacific 47

### 3.1 Gregor Mendel Discovered the Basic Principles of Heredity 48

Mendel's Success 49  
Genetic Terminology 50

### 3.2 Monohybrid Crosses Reveal the Principle of Segregation and the Concept of Dominance 51

What Monohybrid Crosses Reveal 52  
The Molecular Nature of Alleles 54

**CONNECTING CONCEPTS** Relating Genetic Crosses to Meiosis 54

Predicting the Outcomes of Genetic Crosses 56  
The Testcross 60  
Genetic Symbols 60

**CONNECTING CONCEPTS** Ratios in Simple Crosses 61

### 3.3 Dihybrid Crosses Reveal the Principle of Independent Assortment 61

Dihybrid Crosses 61  
The Principle of Independent Assortment 62  
Relating the Principle of Independent Assortment to Meiosis 63  
Applying Probability and the Branch Diagram to Dihybrid Crosses 64  
The Dihybrid Testcross 65

- 3.4 Observed Ratios of Progeny May Deviate from Expected Ratios by Chance 67**  
 The Chi-Square ( $\chi^2$ ) Goodness-of-Fit Test 67

## **Chapter 4 Sex Determination and Sex-Linked Characteristics 81**

### **The Sex of a Dragon 81**

- 4.1 Sex Is Determined by a Number of Different Mechanisms 83**  
 Chromosomal Sex-Determining Systems 83  
 Genic Sex Determination 85  
 Environmental Sex Determination 85  
 Sex Determination in *Drosophila melanogaster* 87  
 Sex Determination in Humans 87
- 4.2 Sex-Linked Characteristics Are Determined by Genes on the Sex Chromosomes 89**  
 X-Linked White Eyes in *Drosophila* 89  
 Nondisjunction and the Chromosome Theory of Inheritance 90  
 X-Linked Color Blindness in Humans 92  
 Symbols for X-Linked Genes 94  
 Z-Linked Characteristics 94  
 Y-Linked Characteristics 94

### **CONNECTING CONCEPTS Recognizing Sex-Linked Inheritance 97**

- 4.3 Dosage Compensation Equalizes the Amount of Protein Produced by X-Linked and Autosomal Genes in Some Animals 97**  
 The Lyon Hypothesis 98  
 Mechanism of Random X Inactivation 99

## **Chapter 5 Extensions and Modifications of Basic Principles 111**

### **The Odd Genetics of Left-Handed Snails 111**

- 5.1 Additional Factors at a Single Locus Can Affect the Results of Genetic Crosses 112**  
 Types of Dominance 112  
 Penetrance and Expressivity 115

- Lethal Alleles 116  
 Multiple Alleles 116

## **5.2 Gene Interaction Takes Place When Genes at Multiple Loci Determine a Single Phenotype 118**

- Gene Interaction That Produces Novel Phenotypes 119  
 Gene Interaction with Epistasis 120

### **CONNECTING CONCEPTS Interpreting Phenotypic Ratios Produced by Gene Interaction 124**

- Complementation: Determining Whether Mutations Are at the Same Locus or at Different Loci 126  
 The Complex Genetics of Coat Color in Dogs 126

## **5.3 Sex Influences the Inheritance and Expression of Genes in a Variety of Ways 128**

- Sex-Influenced and Sex-Limited Characteristics 128  
 Cytoplasmic Inheritance 130  
 Genetic Maternal Effect 132  
 Genomic Imprinting 133

## **5.4 Anticipation Is the Stronger or Earlier Expression of Traits in Succeeding Generations 135**

## **5.5 Phenotypes May Be Influenced by Environmental Factors and Multiple Genes 135**

- Environmental Effects on the Phenotype 135  
 The Inheritance of Continuous Characteristics 136

## **Chapter 6 Pedigree Analysis, Applications, and Genetic Testing 149**

### **The Mystery of the Missing Fingerprints 149**

- 6.1 The Study of Genetics in Humans Is Constrained by Special Features of Human Biology and Culture 150**
- 6.2 Geneticists Often Use Pedigrees to Study the Inheritance of Characteristics in Humans 151**  
 Symbols Used in Pedigrees 151  
 Analysis of Pedigrees 152

Autosomal Recessive Traits 152  
 Autosomal Dominant Traits 153  
 X-Linked Recessive Traits 154  
 X-Linked Dominant Traits 155  
 Y-Linked Traits 156  
 Genetic Mosaicism 158

### **6.3 Studying Twins and Adoptions Can Help Assess the Importance of Genes and Environment 158**

Types of Twins 158  
 Concordance in Twins 159  
 A Twin Study of Asthma 159  
 Adoption Studies 160

### **6.4 Genetic Counseling and Genetic Testing Provide Information to Those Concerned about Genetic Diseases and Traits 161**

Genetic Counseling 161  
 Genetic Testing 162  
 Interpreting Genetic Tests 167  
 Direct-to-Consumer Genetic Testing 167  
 Genealogies and Genetic Testing for Ancestry 168  
 Genetic Discrimination and Privacy 168

---

## **Chapter 7 Linkage, Recombination, and Eukaryotic Gene Mapping 179**

### **Mapping Fear and Aggression in Dogs 179**

#### **7.1 Linked Genes Do Not Assort Independently 180**

#### **7.2 Linked Genes Segregate Together While Crossing Over Produces Recombination Between Them 182**

Notation for Crosses with Linkage 182  
 Complete Linkage Compared with Independent Assortment 183  
 Crossing Over Between Linked Genes 184  
 Calculating Recombination Frequency 186  
 Coupling and Repulsion 187

#### **CONNECTING CONCEPTS Relating Independent Assortment, Linkage, and Crossing Over 188**

Evidence for the Physical Basis of Recombination 189  
 Predicting the Outcomes of Crosses with Linked Genes 190  
 Testing for Independent Assortment 191

Gene Mapping with Recombination Frequencies 193  
 Constructing a Genetic Map with a Two-Point Testcross 194

#### **7.3 A Three-Point Testcross Can Be Used to Map Three Linked Genes 195**

Constructing a Genetic Map with a Three-Point Testcross 196

#### **CONNECTING CONCEPTS Stepping Through the Three-Point Cross 201**

Effects of Multiple Crossovers 203  
 Mapping Human Genes 204  
 Mapping with Molecular Markers 205  
 Locating Genes with Genome-Wide Association Studies 205

#### **7.4 Physical-Mapping Methods Are Used to Determine the Physical Positions of Genes on Particular Chromosomes 206**

Somatic-Cell Hybridization 207  
 Deletion Mapping 207  
 Physical Chromosome Mapping Through Molecular Analysis 209

#### **7.5 Recombination Rates Exhibit Extensive Variation 209**

---

## **Chapter 8 Chromosome Variation 223**

### **The Complex Genome of Wheat 223**

#### **8.1 Chromosome Mutations Include Rearrangements, Aneuploidy, and Polyploidy 224**

Chromosome Morphology 224  
 Types of Chromosome Mutations 225

#### **8.2 Chromosome Rearrangements Alter Chromosome Structure 225**

Duplications 226  
 Deletions 229  
 Inversions 230  
 Translocations 233  
 Fragile Sites 234  
 Copy-Number Variations 234

#### **8.3 Aneuploidy Is an Increase or Decrease in the Number of Individual Chromosomes 236**

Types of Aneuploidy 236

Effects of Aneuploidy 236  
 Aneuploidy in Humans 238  
 Uniparental Disomy 241  
 Genetic Mosaicism 242

#### **8.4 Polyploidy Is the Presence of More Than Two Sets of Chromosomes 242**

Autopolyploidy 243  
 Allopolyploidy 244  
 The Significance of Polyploidy 246

---

### **Chapter 9 Bacterial and Viral Genetic Systems 257**

The Genetics of Medieval Leprosy 257

#### **9.1 Bacteria and Viruses Have Important Roles in Human Society and the World Ecosystem 258**

Life in a Bacterial World 258  
 Bacterial Diversity 259

#### **9.2 Genetic Analysis of Bacteria Requires Special Methods 260**

Techniques for the Study of Bacteria 260  
 The Bacterial Genome 261  
 Plasmids 262

#### **9.3 Bacteria Exchange Genes Through Conjugation, Transformation, and Transduction 263**

Conjugation 264  
 Natural Gene Transfer and Antibiotic Resistance 269

Transformation in Bacteria 269  
 Bacterial Genome Sequences 271  
 Horizontal Gene Transfer 271

#### **9.4 Bacterial Defense Mechanisms 271**

Restriction-Modification Systems 272  
 CRISPR-Cas Systems 272  
 An Evolutionary Arms Race Between Bacteria and Viruses 273

#### **9.5 Viruses Are Simple Replicating Systems Amenable to Genetic Analysis 274**

Techniques for the Study of Bacteriophages 274  
 Transduction 275  
 Gene Mapping in Phages 278  
 Plant and Animal Viruses 279  
 Human Immunodeficiency Virus and AIDS 279

Influenza 282  
 Rhinoviruses 282  
 Zika Virus 283

---

### **Chapter 10 DNA: The Chemical Nature of the Gene 293**

Hominin History in Ancient DNA 293

#### **10.1 Genetic Material Possesses Several Key Characteristics 294**

#### **10.2 All Genetic Information Is Encoded in the Structure of DNA or RNA 294**

Early Studies of DNA 295  
 DNA as the Source of Genetic Information 296  
 Watson and Crick's Discovery of the Three-Dimensional Structure of DNA 299

RNA as Genetic Material 301

#### **10.3 DNA Consists of Two Complementary and Antiparallel Nucleotide Strands That Form a Double Helix 302**

The Primary Structure of DNA 302  
 Secondary Structures of DNA 305

**CONNECTING CONCEPTS** Genetic Implications of DNA Structure 307

---

### **Chapter 11 Chromosome Structure and Organelle DNA 317**

Telomeres and Childhood Adversity 317

#### **11.1 Large Amounts of DNA Are Packed into a Cell 318**

Supercoiling 319  
 The Bacterial Chromosome 320  
 Eukaryotic Chromosomes 320  
 Changes in Chromatin Structure 323

#### **11.2 Eukaryotic Chromosomes Possess Centromeres and Telomeres 325**

Centromere Structure 325  
 Telomere Structure 326

#### **11.3 Eukaryotic DNA Contains Several Classes of Sequence Variation 327**

The Denaturation and Renaturation of DNA 327  
 Types of DNA Sequences in Eukaryotes 327

Organization of Genetic Information in Eukaryotes 328

## **11.4 Organelle DNA Has Unique Characteristics 328**

Mitochondrion and Chloroplast Structure 328

The Endosymbiotic Theory 329

Uniparental Inheritance of Organelle-Encoded Traits 330

The Mitochondrial Genome 333

The Evolution of Mitochondrial DNA 334

Damage to Mitochondrial DNA

Associated with Aging 335

Mitochondrial Replacement Therapy 335

The Chloroplast Genome 336

Movement of Genetic Information

Between Nuclear, Mitochondrial, and Chloroplast Genomes 337

## **Chapter 12 DNA Replication and Recombination 345**

The Importance of a Good Start 345

### **12.1 Genetic Information Must Be Accurately Copied Every Time a Cell Divides 346**

### **12.2 All DNA Replication Takes Place in a Semiconservative Manner 346**

Meselson and Stahl's Experiment 347

Modes of Replication 348

Requirements of Replication 352

Direction of Replication 353

**CONNECTING CONCEPTS** The Direction of Synthesis in Different Modes of Replication 354

### **12.3 Bacterial Replication Requires a Large Number of Enzymes and Proteins 354**

Initiation 355

Unwinding 355

Elongation 356

Termination 359

The Fidelity of DNA Replication 359

**CONNECTING CONCEPTS** The Basic Rules of Replication 360

### **12.4 Eukaryotic DNA Replication Is Similar to Bacterial Replication but Differs in Several Aspects 360**

Eukaryotic Origins of Replication 360

DNA Synthesis and the Cell Cycle 360

The Licensing of DNA Replication 361

Unwinding 361

Eukaryotic DNA Polymerases 361

Nucleosome Assembly 362

The Location of Replication Within the Nucleus 363

Replication at the Ends of Chromosomes 363

Replication in Archaea 366

### **12.5 Recombination Takes Place Through the Alignment, Breakage, and Repair of DNA Strands 366**

Models of Recombination 367

Enzymes Required for Recombination 368

## **Chapter 13 Transcription 379**

Wrecks on the DNA Highway 379

### **13.1 RNA, Consisting of a Single Strand of Ribonucleotides, Participates in a Variety of Cellular Functions 380**

An Early RNA World 380

The Structure of RNA 381

Classes of RNA 382

### **13.2 Transcription Is the Synthesis of an RNA Molecule from a DNA Template 383**

The Template 383

The Substrate for Transcription 385

The Transcription Apparatus 386

### **13.3 Bacterial Transcription Consists of Initiation, Elongation, and Termination 387**

Initiation 387

Elongation 390

Termination 390

**CONNECTING CONCEPTS** The Basic Rules of Transcription 392

### **13.4 Eukaryotic Transcription Is Similar to Bacterial Transcription but Has Some Important Differences 392**

Transcription and Nucleosome Structure 392

Promoters 393

Initiation 394

Elongation 395

Termination 396

- 13.5** Transcription in Archaea Is More Similar to Transcription in Eukaryotes Than to Transcription in Bacteria 397

---

## Chapter 14 RNA Molecules and RNA Processing 405

A Royal Disease 405

- 14.1** Many Genes Have Complex Structures 406  
 Gene Organization 407  
 Introns 408  
 The Concept of the Gene Revisited 409
- 14.2** Messenger RNAs, Which Encode Proteins, Are Modified after Transcription in Eukaryotes 409  
 The Structure of Messenger RNA 410  
 Pre-mRNA Processing 411  
 RNA Splicing 413  
 Alternative Processing Pathways 416  
 RNA Editing 418

**CONNECTING CONCEPTS** Eukaryotic Gene Structure and Pre-mRNA Processing 419

- 14.3** Transfer RNAs, Which Attach to Amino Acids, Are Modified after Transcription in Bacterial and Eukaryotic Cells 420  
 The Structure of Transfer RNA 420  
 Transfer RNA Gene Structure and Processing 421
- 14.4** Ribosomal RNA, a Component of the Ribosome, Is Also Processed after Transcription 422  
 The Structure of the Ribosome 422  
 Ribosomal RNA Gene Structure and Processing 423
- 14.5** Small RNA Molecules Participate in a Variety of Functions 424  
 RNA Interference 424  
 Small Interfering RNAs and MicroRNAs 425  
 Piwi-Interacting RNAs 426  
 CRISPR RNA 426
- 14.6** Long Noncoding RNAs Regulate Gene Expression 427

---

## Chapter 15 The Genetic Code and Translation 435

A Child Without a Spleen 435

- 15.1** Many Genes Encode Proteins 436  
 The One Gene, One Enzyme Hypothesis 436  
 The Structure and Function of Proteins 439
- 15.2** The Genetic Code Determines How the Nucleotide Sequence Specifies the Amino Acid Sequence of a Protein 441  
 Breaking the Genetic Code 442  
 The Degeneracy of the Code 444  
 The Reading Frame and Initiation Codons 445  
 Termination Codons 446  
 The Universality of the Code 446

**CONNECTING CONCEPTS** Characteristics of the Genetic Code 446

- 15.3** Amino Acids Are Assembled into a Protein Through Translation 447  
 The Binding of Amino Acids to Transfer RNAs 447  
 The Initiation of Translation 448  
 Elongation 451  
 Termination 452

**CONNECTING CONCEPTS** A Comparison of Bacterial and Eukaryotic Translation 454

- 15.4** Additional Properties of RNA and Ribosomes Affect Protein Synthesis 455  
 The Three-Dimensional Structure of the Ribosome 455  
 Polyribosomes 455  
 Messenger RNA Surveillance 455  
 Folding and Posttranslational Modifications of Proteins 458  
 Translation and Antibiotics 458

---

## Chapter 16 Control of Gene Expression in Bacteria 469

Operons and the Noisy Cell 469

- 16.1** The Regulation of Gene Expression Is Critical for All Organisms 470  
 Genes and Regulatory Elements 471

- Levels of Gene Regulation 471
- DNA-Binding Proteins 472
- 16.2 Transcription in Bacterial Cells Is Regulated by Operons 473**
  - Operon Structure 473
  - Negative and Positive Control: Inducible and Repressible Operons 474
  - The *lac* Operon of *E. coli* 476
  - lac* Mutations 479
  - Positive Control and Catabolite Repression 483
  - The *trp* Operon of *E. coli* 484
- 16.3 Some Operons Regulate Transcription Through Attenuation, the Premature Termination of Transcription 485**
  - Attenuation in the *trp* Operon of *E. coli* 485
  - Why Does Attenuation Take Place in the *trp* Operon? 489
- 16.4 Other Sequences Control the Expression of Some Bacterial Genes 489**
  - Bacterial Enhancers 490
  - Antisense RNA 490
  - Riboswitches 490
  - RNA-Mediated Repression Through Ribozymes 491

---

## Chapter 17 Control of Gene Expression in Eukaryotes 501

Genetic Differences That Make Us Human 501

- 17.1 Eukaryotic Cells and Bacteria Share Many Features of Gene Regulation but Differ in Several Important Ways 502**
- 17.2 Changes in Chromatin Structure Affect the Expression of Eukaryotic Genes 503**
  - DNase I Hypersensitivity 503
  - Chromatin Remodeling 503
  - Histone Modification 504
  - DNA Methylation 507
- 17.3 Transcription Is Regulated by Transcription Factors 507**
  - Transcription Factors 507

- Enhancers and Silencers 510
- Insulators and Regulatory Neighborhoods 510
- Regulation of Transcriptional Stalling and Elongation 511
- Coordinated Gene Regulation 512
- 17.4 Eukaryotic Genes Are Regulated by RNA Processing and Degradation 512**
  - Gene Regulation Through RNA Splicing 513
  - The Degradation of RNA 514
- 17.5 RNA Interference Is an Important Mechanism of Gene Regulation 515**
  - Small Interfering RNAs and MicroRNAs 515
  - Mechanisms of Gene Regulation by RNA Interference 515
  - The Control of Development by RNA Interference 515
  - RNA Crosstalk 517
- 17.6 The Expression of Some Genes Is Regulated by Processes That Affect Translation or by Modifications of Proteins 517**

**CONNECTING CONCEPTS A Comparison of Bacterial and Eukaryotic Gene Control 518**

---

## Chapter 18 Gene Mutations and DNA Repair 525

Lou Gehrig and Expanding Nucleotide Repeats 525

- 18.1 Mutations Are Inherited Alterations in the DNA Sequence 526**
  - The Importance of Mutations 526
  - Categories of Mutations 527
  - Types of Gene Mutations 528
  - Functional Effects of Mutations 530
  - Suppressor Mutations 531
  - Mutation Rates 535
- 18.2 Mutations May Be Caused by a Number of Different Factors 536**
  - Spontaneous Replication Errors 537
  - Spontaneous Chemical Changes 539
  - Chemically Induced Mutations 540
  - Radiation 542

### **18.3 Mutations Are the Focus of Intense Study by Geneticists 543**

Detecting Mutagens with the Ames Test 543  
Effects of Radiation Exposure in Humans 544

### **18.4 Transposable Elements Can Cause Mutations 545**

General Characteristics of Transposable Elements 545  
The Process of Transposition 546  
The Mutagenic Effects of Transposition 547  
Transposable Elements in Bacteria 549  
Transposable Elements in Eukaryotes 549

#### **CONNECTING CONCEPTS Types of Transposable Elements 553**

Transposable Elements in Genome Evolution 553

### **18.5 A Number of Pathways Can Repair DNA 554**

Mismatch Repair 554  
Direct Repair 556  
Base-Excision Repair 556  
Nucleotide-Excision Repair 557

#### **CONNECTING CONCEPTS The Basic Pathway of DNA Repair 558**

Repair of Double-Strand Breaks 558  
Translesion DNA Polymerases 558  
Genetic Diseases and Faulty DNA Repair 559

---

## **Chapter 19 Molecular Genetic Analysis and Biotechnology 569**

### **Editing the Genome with CRISPR-Cas9 569**

#### **19.1 Genetics Has Been Transformed by the Development of Molecular Techniques 570**

Key Innovations in Molecular Genetics 571  
Working at the Molecular Level 571

#### **19.2 Molecular Techniques Are Used to Cut and Visualize DNA Sequences 572**

Recombinant DNA Technology 572  
Restriction Enzymes 572  
Engineered Nucleases 573  
CRISPR-Cas Genome Editing 574  
Separating and Viewing DNA Fragments 578

Locating DNA Fragments with Probes 579

#### **19.3 Specific DNA Fragments Can Be Amplified 579**

The Polymerase Chain Reaction 580  
Gene Cloning 582

#### **19.4 Molecular Techniques Can Be Used to Find Genes of Interest 586**

DNA Libraries 587  
In Situ Hybridization 588  
Positional Cloning 589

#### **19.5 DNA Sequences Can Be Determined and Analyzed 590**

Dideoxy Sequencing 590  
Next-Generation Sequencing Technologies 592  
DNA Fingerprinting 594

#### **19.6 Molecular Techniques Are Increasingly Used to Analyze Gene Function 597**

Forward and Reverse Genetics 597  
Creating Random Mutations 597  
Targeted Mutagenesis 597  
Transgenic Animals 598  
Knockout Mice 599  
Silencing Genes with RNAi 601  
Using RNAi to Treat Human Disease 601

#### **19.7 Biotechnology Harnesses the Power of Molecular Genetics 602**

Pharmaceutical Products 602  
Specialized Bacteria 603  
Agricultural Products 603  
Genetic Testing 604  
Gene Therapy 604

---

## **Chapter 20 Genomics and Proteomics 615**

### **Sequencing Earth's Biodiversity 615**

#### **20.1 Structural Genomics Determines the DNA Sequences and Organization of Entire Genomes 617**

Genetic Maps 617  
Physical Maps 618  
Sequencing an Entire Genome 619  
The Human Genome Project 620  
What Exactly Is the Human Genome? 623

Single-Nucleotide Polymorphisms 623  
 Bioinformatics 625  
 Metagenomics 626  
 Synthetic Biology 627

## **20.2 Functional Genomics Determines the Functions of Genes by Using Genomic Approaches 628**

Predicting Function from Sequence 628  
 Gene Expression 629  
 Gene Expression and Reporter Sequences 633  
 Genome-Wide Mutagenesis 633

## **20.3 Comparative Genomics Studies How Genomes Evolve 635**

Prokaryotic Genomes 635  
 Eukaryotic Genomes 636  
 The Human Genome 639

## **20.4 Proteomics Analyzes the Complete Set of Proteins Found in a Cell 640**

Determination of Cellular Proteins 640  
 Affinity Capture 642  
 Protein Microarrays 642  
 Structural Proteomics 642

---

## **Chapter 21 Epigenetics 651**

Epigenetics and the Dutch Hunger Winter 651

### **21.1 What Is Epigenetics? 652**

### **21.2 Several Molecular Processes Lead to Epigenetic Changes 653**

DNA Methylation 653  
 Histone Modifications 656  
 Epigenetic Effects of RNA Molecules 658

### **21.3 Epigenetic Processes Affect Development 658**

Epigenetic Changes Associated with Cell Differentiation 658  
 Transgenerational Effects Through Paramutation 659  
 X Inactivation 660  
 Genomic Imprinting 662  
 Epigenetic Effects in Monozygotic Twins 664

### **21.4 Epigenetic Alterations Bring about Changes in Behavior, Reproduction, and Metabolism 664**

Behavioral Epigenetics 664  
 Epigenetic Effects of Environmental Chemicals 666  
 Epigenetic Effects on Metabolism 666

## **21.5 The Epigenome 667**

---

## **Chapter 22 Developmental Genetics and Immunogenetics 675**

The Origin of Spineless Sticklebacks 675

### **22.1 Development Takes Place Through Cell Determination 676**

Cloning Experiments on Plants 677  
 Cloning Experiments on Animals 677

### **22.2 Pattern Formation in *Drosophila* Serves as a Model for the Genetic Control of Development 678**

The Development of the Fruit Fly 678  
 Egg-Polarity Genes 679  
 Segmentation Genes 682  
 Homeotic Genes in *Drosophila* 683  
 Homeobox Genes in Other Organisms 684

### **CONNECTING CONCEPTS The Control of Development 685**

Epigenetic Changes in Development 686  
 Mapping Gene Expression in *Drosophila* Embryos 686

### **22.3 Genes Control the Development of Flowers in Plants 686**

Flower Anatomy 686  
 Genetic Control of Flower Development 686

### **CONNECTING CONCEPTS Comparison of Development in *Drosophila* and Flowers 688**

### **22.4 Programmed Cell Death Is an Integral Part of Development 688**

### **22.5 The Study of Development Reveals Patterns and Processes of Evolution 690**

### **22.6 The Development of Immunity Occurs Through Genetic Rearrangement 692**

The Organization of the Immune System 692  
 Immunoglobulin Structure 694

The Generation of Antibody Diversity 694  
 T-Cell-Receptor Diversity 696  
 Major Histocompatibility Complex Genes 696  
 Genes and Organ Transplants 697

## **Chapter 23 Cancer Genetics 705**

Four Families and the Guardian of the Genome 705

### **23.1 Cancer Is a Group of Diseases Characterized by Cell Proliferation 707**

Tumor Formation 707  
 Cancer as a Genetic Disease 708  
 The Role of Environmental Factors in Cancer 710

### **23.2 Mutations in Several Types of Genes Contribute to Cancer 711**

Oncogenes and Tumor-Suppressor Genes 711  
 Genes That Control the Cell Cycle 713  
 DNA-Repair Genes 717  
 Genes That Regulate Telomerase 718  
 Genes That Promote Vascularization and the Spread of Tumors 718  
 MicroRNAs and Cancer 719  
 Cancer Genome Projects 719

### **23.3 Epigenetic Changes Are Often Associated with Cancer 720**

### **23.4 Colorectal Cancer Arises Through the Sequential Mutation of a Number of Genes 721**

### **23.5 Changes in Chromosome Number and Structure Are Often Associated with Cancer 722**

### **23.6 Viruses Are Associated with Some Cancers 723**

Retroviruses and Cancer 724  
 Human Papillomavirus and Cervical Cancer 724

---

## **Chapter 24 Quantitative Genetics 731**

Corn Oil and Quantitative Genetics 731

### **24.1 Quantitative Characteristics Are Influenced by Alleles at Multiple Loci 732**

The Relation Between Genotype and Phenotype 732  
 Types of Quantitative Characteristics 734  
 Polygenic Inheritance 735  
 Kernel Color in Wheat 735  
 Determining Gene Number for a Polygenic Characteristic 737

### **24.2 Statistical Methods Are Required for Analyzing Quantitative Characteristics 737**

Distributions 737  
 Samples and Populations 738  
 The Mean 739  
 The Variance and Standard Deviation 739  
 Correlation 740  
 Regression 741  
 Applying Statistics to the Study of a Polygenic Characteristic 743

### **24.3 Heritability Is Used to Estimate the Proportion of Variation in a Trait That Is Genetic 744**

Phenotypic Variance 744  
 Types of Heritability 746  
 Calculating Heritability 746  
 The Limitations of Heritability 748  
 Locating Genes That Affect Quantitative Characteristics 750

### **24.4 Genetically Variable Traits Change in Response to Selection 752**

Predicting the Response to Selection 753  
 Limits to the Response to Selection 754  
 Correlated Responses to Selection 755

---

## **Chapter 25 Population Genetics 765**

The Wolves of Isle Royale 765

### **25.1 Genotypic and Allelic Frequencies Are Used to Describe the Gene Pool of a Population 767**

Mathematical Models for Understanding Genetic Variation 767  
 Calculating Genotypic Frequencies 768  
 Calculating Allelic Frequencies 768

## **25.2 The Hardy–Weinberg Law Describes the Effect of Reproduction on Genotypic and Allelic Frequencies 770**

Genotypic Frequencies at Hardy–Weinberg Equilibrium 770

Closer Examination of the Hardy–Weinberg Law 771

Implications of the Hardy–Weinberg Law 771

Extensions of the Hardy–Weinberg Law 772

Testing for Hardy–Weinberg Proportions 772

Estimating Allelic Frequencies with the Hardy–Weinberg Law 773

## **25.3 Nonrandom Mating Affects the Genotypic Frequencies of a Population 774**

## **25.4 Several Evolutionary Forces Can Change Allelic Frequencies 776**

Mutation 776

Migration 778

Genetic Drift 779

Natural Selection 782

**CONNECTING CONCEPTS The General Effects of Forces That Change Allelic Frequencies 787**

---

## **Chapter 26 Evolutionary Genetics 797**

Chimpanzees, Bonobos, and the Question of Species 797

### **26.1 Evolution Occurs Through Genetic Change Within Populations 799**

Biological Evolution 799

Evolution as a Two-Step Process 799

Evolution in Bighorn Sheep 799

### **26.2 Many Natural Populations Contain High Levels of Genetic Variation 800**

Molecular Variation 801

### **26.3 New Species Arise Through the Evolution of Reproductive Isolation 802**

The Biological Species Concept 802

Reproductive Isolating Mechanisms 803

Modes of Speciation 804

Genetic Differentiation Associated with Speciation 808

### **26.4 The Evolutionary History of a Group of Organisms Can Be Reconstructed by Studying Changes in Homologous Characteristics 810**

Interpreting Phylogenetic Trees 811

The Alignment of Homologous Sequences 811

The Construction of Phylogenetic Trees 812

### **26.5 Patterns of Evolution Are Revealed by Molecular Changes 813**

Rates of Molecular Evolution 813

The Molecular Clock 815

Evolution Through Changes in Gene Regulation 816

Genome Evolution 816

## **Reference Guide to Model Genetic Organisms A1**

The Fruit Fly *Drosophila melanogaster* A2

The Bacterium *Escherichia coli* A4

The Nematode Worm *Caenorhabditis elegans* A6

The Plant *Arabidopsis thaliana* A8

The Mouse *Mus musculus* A10

The Yeast *Saccharomyces cerevisiae* A12

## **Working with Fractions: A Review B1**

Glossary C1

Answers to Selected Problems D1

Index E1
