## 1. Beyond negativity: Motivational relevance as cause of attentional bias to positive stimuli

*Julia Vogt, Yasmene Bajandouh, and Umkalthoom Alzubaidi*

Introduction	1
Main theories of attention to positive information	2
Phylogenetic relevance	3
Ontogenetic relevance	3
Current relevance	4
Arousal as cause of attentional bias to phylogenetic and ontogenetic relevant events	6
Methods	6
Cueing paradigms	6
Emotional Stroop paradigm	7
Emotional flanker paradigm	7
Visual search	8
Brain regions involved in the emergence of the Bias	8
Somatovisceral responses related to the Bias	10
Similarities and differences between healthy and clinical populations	10
Limitations and future directions	12
Summary	13
References	13

## 2. Attention bias toward negative stimuli

*Elinor Abado, Thalia Richter, and Hadas Okon-Singer*

Introduction	19
Major theories on the nature and underlying causes of attention biases	21
Prevalent paradigms and findings in attention bias	23
Brain regions involved in the emergence of attention bias	28
Autonomic responses related to attention bias	30
Similarities and differences between healthy and clinical populations	31

Limitations and future directions	33
Summary	35
References	35
Further reading	40
 <b>3. The neurophysiological basis of optimism bias</b>	
<i>Mihai Dricu, Laura Kress, and Tatjana Aue</i>	
Introduction	41
Major theories in the field	43
When does optimism bias manifest?	43
How and why does optimism bias emerge?	46
Methods used to investigate the optimism bias	50
Brain regions involved in the emergence and maintenance of the bias	51
Somatovisceral responses related to optimism bias	57
Similarities and differences between healthy and clinical populations	58
Limitations	60
Future directions	62
Summary	63
References	64
 <b>4. Negative expectancy biases in psychopathology</b>	
<i>Peter J. de Jong and Judith K. Daniels</i>	
Introduction	71
Methods used to investigate expectancy biases	72
Development of expectancy biases	73
Negative expectancy biases	73
Pathways to expectancy bias	75
Factors that contribute to the robustness of expectancy bias	76
Avoidance behaviors	76
Modulatory effects of expectancies	77
Uncontrollability of expected outcomes	79
Uncertainty and illusory correlations	81
Postevent "validation" processes (rumination and immunization)	84
The neural basis of expectancy biases	85
Expectations influencing perception	85
Neural correlates of overgeneralization of fear stimuli	86
Neural correlates of regulatory responses	86
Somatovisceral responses related to negative expectancy biases	87
Similarities and differences between healthy and clinical populations	89
Recapitulation, limitations, and some future directions	90
References	92
Further reading	97

## 5. Positive interpretation bias across the psychiatric disorders

*Ellen Jopling, Jessica Wilson, Matthew Burke,  
Alison Tracy, and Joelle LeMoult*

Introduction	99
Major theories in the field	100
Methods used to investigate a positive interpretation bias	102
Brain regions involved in the emergence of a positive interpretation biases	104
Positive interpretation bias specifically	104
Constructs related to a positive interpretation bias	105
Summary	105
Somatovisceral (e.g., autonomic) responses involved in the emergence of a positive interpretation bias	106
Similarities and differences between healthy and clinical populations in the biological basis of positive interpretation biases	108
Depression	108
Social anxiety disorder	109
Comorbid depression and social anxiety disorder	109
Other anxiety disorder	110
Summary and debate	110
Limitations	111
Future directions	112
Chapter summary	112
References	113

## 6. Resolving ambiguity: Negative interpretation biases

*K. Lira Yoon, Victoria Shaffer, and Anna Benedict*

Introduction	119
Major theories in the field	119
Methods used to investigate the biases	121
Direct measures of interpretation biases	121
Indirect measures of interpretation biases	122
Brain regions involved in the emergence of the bias	125
Somatovisceral responses related to the biases	126
Similarities and differences between healthy and clinical populations	128
Negative interpretation biases: A risk factor for anxiety and depression	130
Limitations	132
Future directions	133
Summary	134
References	134

## 7. A "rosy view" of the past: Positive memory biases

*Orly Adler and Ainat Pansky*

Methods used to investigate the bias	141
Major theories in the field	143
Self-protecting and self-enhancing mechanisms	143
Self-consistency	146
Variables that may moderate the bias—Individual differences	148
Brain regions involved in the emergence of the bias	150
Similarities and differences between healthy and clinical populations	153
Summary, limitations, and future directions	155
References	157
Further reading	170

## 8. Negative memory biases in health and psychiatric disorders

*S.S. Grant, A.M. Huskey, J.A. Faunce, and B.H. Friedman*

Introduction	173
Major theories of affective memory biases	174
Semantic/associative network models	174
Beck's theory of emotional disorders	176
Elaboration/priming hypotheses	177
Overgeneral memory and executive functioning	178
The combined cognitive bias hypothesis	179
Methods for examining memory biases	179
Measuring negative encoding biases	180
Measuring negative recall biases	180
Brain regions involved in the emergence of memory biases	181
Somatovisceral contributions	182
Endocrine correlates	183
Similarities and differences between healthy and clinical populations	184
Limitations	185
Future directions	185
Summary	186
References	187
Further reading	191

## 9. The interplay among attention, interpretation, and memory biases in depression: Revisiting the combined cognitive bias hypothesis

*Jonas Everaert and Ernst H.W. Koster*

Introduction	193
Major theories in the field	195
The causal loop diagram of depression dynamics	196
The attention-memory bias-interaction research framework	196

Conceptualizing the combined influence of cognitive biases on depression over time	197
Methods used to investigate the CCBH	199
Association questions	199
Causal questions	200
Predictive magnitude questions	202
Empirical research on the CCBH	202
Association questions	202
Causal questions	204
Predictive magnitude questions	206
Limitations and future directions	206
Summary	208
References	208
Further reading	213
 10. The impact of top-down factors on threat perception biases in health and anxiety	
<i>Tamara J. Sussman, Jingwen Jin, and Aprajita Mohanty</i>	
Introduction	215
Major theories and evidence supporting top-down threat processing	217
Theoretical considerations	220
Methods used to investigate threat perception	220
Neural mechanisms involved in threat processing	222
Neural mechanisms of bottom-up threat processing	222
Neural mechanisms of top-down threat processing	223
Peripheral mechanisms of threat processing	226
Threat processing in anxiety versus healthy populations	226
Neural mechanisms of threat processing in anxiety versus healthy populations	228
Limitations	229
Future directions	230
Summary and conclusions	231
References	232
 11. Cognitive biases across development: A detailed examination of research in fear learning	
<i>Rivkah Ginat-Frolich and Tomer Shechner</i>	
Introduction	243
Cognitive biases related to fear learning across development	245
Fear acquisition and extinction	246
Retrieval of fear extinction memories	249
Biases related to overgeneralization of fear	251
Conclusions and future directions	254
References	255
Further reading	260

**12. Attentional control and cognitive biases  
as determinants of vulnerability and resilience  
in anxiety and depression**

*Nazanin Derakhshan*

Introduction	261
Cognitive biases and emotional vulnerability	262
Neurocognitive mechanisms of attentional control in emotional vulnerability	263
A mediating role for attentional control in cognitive biases	266
Exercising attentional control to reduce emotional vulnerability	267
Implications for real world, educational, and clinical settings	268
Can adaptive cognitive training change cognitive bias?	270
Concluding remarks and future directions	270
References	271
Further reading	274
