

Brief Contents

1	Making Sense of Variability: An Introduction to Statistics	1
2	Statistics in the Context of Scientific Research	17
3	Looking at Data: Frequency Distributions and Graphs	36
4	Looking at Data: Measures of Central Tendency	70
5	Looking at Data: Measures of Variability	86
6	The Normal Distribution, Probability, and Standard Scores	105
7	Understanding Data: Using Statistics for Inference and Estimation	135
8	Is There Really a Difference? Introduction to Statistical Hypothesis Testing	159
9	The Basics of Experimentation and Testing for a Difference Between Means	191
10	One-Factor Between-Subjects Analysis of Variance	238
11	Two-Factor Between-Subjects Analysis of Variance	282
12	One-Factor Within-Subjects Analysis of Variance	337
13	Correlation: Understanding Covariation	369
14	Regression Analysis: Predicting Linear Relationships	409
15	Nonparametric Statistical Tests	447
APPENDIX A	Mathematics Review	484
APPENDIX B	Statistical Symbols	490
APPENDIX C	Statistical Tables	492
APPENDIX D	Commonly Used Formulas	508
APPENDIX E	Answers for Computational Problems	515
APPENDIX F	Glossary	544
	References	551
	Name Index	555
	Subject Index	557
