

Open Access to research results

Context. Realization. Support.

“The free exchange of ideas and information made possible by Open Access is a key requirement for innovation and progress in teaching and research.”

Prof. Dr. Dr. h.c. Andrea Schenker-Wicki
Rector

WHAT IS OPEN ACCESS?

Open Access offers a new paradigm for the publication of scholarly works and data by providing anyone with free access to research results over the Internet.

Open Access is promoted by higher education institutions, scientific organizations and libraries around the world.

REACHING THE GOALS

Green Road:

Works that have already been published conventionally can be self-archived or republished in an open online archive. The University of Basel offers the institutional repository edoc for this scenario.

Depending on the publisher guidelines, the published version or the last version of the author’s manuscript can be used for this purpose.

Gold Road:

Immediate first publication with Open Access in a peer reviewed journal or e-book platform:

WHY DO I NEED OPEN ACCESS?

Do you or your project partners always have direct access to the information you need for your research? How will you access important scientific and academic journals after your university career? What legal challenges face new learning concepts such as Massive Open Online Courses (MOOCs) or interinstitutional virtual research environments?

Open Access enables the free exchange of ideas and information that are essential to innovation and progress and offers new solutions for the teaching and research endeavors of the future.

THE GOALS OF OPEN ACCESS

Fast, global distribution of scholarly information

Increased visibility and citation frequency of publications

Simplified reuse for subsequent research

Promoting interdisciplinary and international collaboration

Free access to findings from publicly financed research

Development of a sustainable, transparent publication system

Reliable, long-term availability of publications and data

WHAT IS EDOC?

edoc is the University of Basel's institutional repository. It indexes scholarly publications originating from the University of Basel and offers permanent access to the full text of the publications. edoc enables the implementation of the University of Basel's open access policy and meets the guidelines of the Swiss National Science Foundation (SNSF) for the republication of research findings.

The University Library manages the data stored in edoc. It automatically imports publication data from the university's research database, verifies the bibliographic information and makes the full text publicly available whenever possible.

Only electronic dissertations are uploaded directly into edoc by PhD students. You will receive the necessary account details once you have submitted the printed deposit copies.

International standards are used so that the contents of edoc can be indexed by academic search engines such as Google Scholar and BASE. Individual users can export content in a dozen different data formats.

OPEN ACCESS WITH EDOC

To ensure your publications are publicly accessible on edoc, enter them in the university's research database and then upload the accompanying full text.

The publications will then be added to edoc and remain blocked until the legality of the republication has been verified.

To speed up the republication process, the following basic rule applies:

For works published online (particularly journal articles): Upload the most recent author's manuscript not formatted by the publisher (ideally with the review process corrections) in PDF format.

For print-only publications: Upload a PDF of the version from the publisher. Contact the publisher in a timely fashion to determine whether republication on edoc is possible. We will then contact you to discuss how to proceed.

Whenever you upload the full text of a publication in the research database, we make sure that your publication is made available in the optimum, legally permissible version on edoc after the expiration of any applicable blocking periods (embargo).
